Message-ID: <386DE7ED.49F39E32@teleweb.at>
Source record: 22484

Hello from Vienna !

Excuse please the bandwith, but perhaps you are interested:

I have made a nice screensaver from my QSL cards of Marconi
Memorial
Stations. I have put the install file on my webpage:
http://www.swl.net/oe1002419 . Look for the file in the Frame
Version of
the page in the left frame under QSL Pics; you'll find a link
named QSL
Screensaver. Load it down for free (800 kB) and start the file.

The file has the name install.exe and is proofed with 2 virus
programs
(Norton and McAfee). The installation file only installs a scr
file in
the windows directory, no dll's or other waste. If you want to
remove
the screensaver from your computer, just delete the file
MarconiQSL.scr
from the windows directory, thats all.

If the download should'nt work for you, I can also send the file
via
email, but its easier to download it from the page.

I wish you all a Happy New Year 2000 !!

Wishing you all a Happy, Peaceful and Prosperous New Year, Century and Millennium.

How do you reckon cycle 23 is shaping up?? If you are a 6 metre enthusiast, what are your chances of working some nice juicy dx in the next 2 to 4 years via F2 propagation?

Have a look on my web pages http://www.6mdx.eurobell.co.uk/index.html for some likely answers.

To me it is a steady, slower than some would have expected (but then with all of the hype these days what isn't) and probably on schedule for peaking in the middle of 2001 or thereabouts.

I think he has NO idea what DX-ing from rare one is.

> I appreciate his web page telling us how to work him.

Good on you, mate. IMHO I think he does most of the things wrong !
But the first one is to tell us we ALL are LIDs.

Quoted text below is from the OPDX bulletin

==========

>It is almost CERTAIN that this will be the LAST VK0/m operation using CW,
possibly the
>LAST VK0/m operation full stop (cannot go into reasons why)

First of all, how can you be sure that there will be no more CW operation
from Macquarie Isl ? What if I (or someone else of more than 15.000
licensed hams in VK) get the job at ANARE and go to Macquarie Isl. for a few
months ?

>cannot go into reasons why

Yeah-yeah, same like :"for various reasons VK0LD will terminate
opertaion...blah-blah" and then you come with vk0mm announcement a few days
later

>so instead of griping &
>pontificating just work me or get out of the way & let someone else work me
!!

And let's not forget to include few $$$ or our credit card number with our
QSL (instructions below)

>FINALLY AND VERY IMPORTANT! Currently, there is no QSL route for VK0LD or
VK0MM
>and no manager for VK0LD or VK0MM. QSLs will be issued upon Alan's return
home, around
>December 2000. A QSL

How about the p.o.box, Alan, that cost about FOURTY AUSTRALIAN DOLLARS
less than US$ 30-) A YEAR ! When you go to the remote operation (dx ped or
so) first thing you announce is your call sign, the second is QSL
information. Ever heard of QSL bureau or QSL manager ?

> ".... QSL mail sent to the QTHR/callbook address will be destroyed unopened and QSL via the
> Buro will not be accepted."

This is cruel and very unfriendly. Ever heard of a large cardboard box (size of TV or so) to store letters meanwhile. Not accepting QSL via bureau especially in Australia, as VK-QSL bureau works fantastic) IMHO is rude moneymaking.

> "Do not attempt multiple "insurance" QSOs. Duplicate QSOs on the same band/mode will result in
>ALL QSOs for that station being automatically removed from the log by the logging software." Alan
>reports that he has already removed several stations from his log for doing this.

Whoooow !! This is really getting too much.
Dear Alan, what if you work the station VK4RM on CW but by mistake log him as VK4NM, and few days later on the same band/mode work me, VK4NM - does it mean we're both out of your log. If I worked you but had very heavy QRM (which happens) and you went on working another station so I am not sure if I was in your log what should I do ? Try again and ask God to delete me from your log if I already was in ??? Otherwise you'll do his job. Or maybe wait for another VK0/M expedition which you say will probably never come ? And, you already said no log online !
That logic you're employing is absolutely sick !

To delete someone from the log just because he worked you twice ? Do you think about your operations DXCC credibility ? If I was a member of DXCC desk I would definately vote "INVALID" !!! I think some people really should ask DXCC to do so

(Opinions ???)

Reading your instructions on your website I remember growing up in a comunist country, listening to dictators, comunist pary, orders, orders, orders ... Boy were they good !

Alan, are you reading NGs at all ? It's all about you, mate.

73 de Mike, VK4NM

14. DXCC country prefixes.....etc.....

Newsgroup: rec.radio.amateur.dx

I posted this question once before, and had a good response. However, I guess I worded my question in a confusing manner.

I am looking for a website where I can enter the name of a country.......and be given the prefixes that apply to that country.

Noooooo..........I dont want to enter a prefix and be given the name of a country.

I want to do the reverse. For instance, I want to be able to enter:

"Slovenia"

and be presented with all the prefixes that mite be used by the hams in that country.

There are several **FINE** prefix finders on the web.......and they are very, very useful.

I want to do the reverse.

Can anyone help me out here?

sjc KA0FPJ

Check out the December issue of QST, 50 MHz column. Alternatively, check www.ac6v.com for foreign postage rates, and your local stamp collector's dealer. I found, that stamp dealerships seem to always have some mint foreign postage stamps, which nobody seems to want, and which thus are ridiculously cheap.

Press Release

LogWindows 3.06.50 released

Program available January 5, 2000

Muscle Shoals, Alabama. January 3, 2000: Creative Services Software announced today that the first update to LogWindows, version 3.06.50 will be released on Wednesday, January 5, 2000.

LogWindows was created in 1994 by Ira Chavis, WA1W and had been distributed in the past by AEA, Timewave and SCO. The program interfaces with all of the CSS TNC host mode programs including PacTerm '98, PKTerm '99 and MultiComm Host.

CSS is selling the program through dealers and direct sales.. The program will retails for $49.95. CSS is offering upgrades to current users of the program for $25.00, as well as a competitive upgrade from other logging programs for $35.00.

"If someone purchases or upgrades to LogWindows 3.06.50 now, they'll not only get all the future 3.x upgrades, but also a FREE upgrade to the 32 bit version of LogWindows when it becomes available", said Rick Ruhl,. President and owner of Creative Service Software.

Creative Services Software is at http://www.cssincorp.com

Hi Charles,

We have the new web page at http://www.cssincorp.com/logwindows. This new release has the update for the FO callsigns, a new country list and the latest DLL's for the CD callbooks.

We aquired rights to sell, support and update the software from SCO on the 26th of December, and wanted to get out a release as soon as we could, so there are just a few upgrades in this version.

But once you get this version, you get free updates to any future 3.x releases, as well as a FREE updates to the 32 bit version. Details on the web site.

FYI, (and others), we will continue to support other Logging programs in our TNC software, PcPakatt for Windows, Pacterm '98 and PKterm '99.

Thanks Rick,
It is a real breath of fresh air to see some service and support being pumped back into Log Windows. I bailed out of it after Les took over and I wanted a true 32 bit logger. I have found DXbase 2000 to be everything LW was and a whole lot more. I have a link on my website for the informational demo. Thanks again for the info on LW.

>
>Wayne N4AHS

Very carefully. And very patiently.... In your case, you join the ARRL. Then you send your outgoing bureau cards with some $$$ to the ARRL in Newington, CT. and they foward them to bureaus all over the world for you. Incoming cards for you will go to the W4 bureau, and you supply either $$$ or envelopes and stamps so they can send them to your house. The web page at:

http://www.arrl.org/qsl/qslin.html

has some basic bureau information which should get you started. Be aware that some places don't have bureaus, that bureau cards may take a few years to arrive from others, and that not all hams receive or answer bureau cards.

Some countries require hams to be 'members' to receive bureau cards, and some countries have incoming but no outgoing bureaus, so don't expect to get a 100% return rate on cards you send.

wstevenson@acsd.k12.sc.us wrote:
> How do you QSL through the bureau?

The easiest way is to use the ARRL Outgoing QSL Bureau.
http://www.arrl.org/qsl/qslout.html
has details. You do have to be an ARRL member to use it. (well worth
it anyway)

You will also have to have envelopes on file with your local incoming
QSL Bureau to receive cards back from the other stations.
http://www.arrl.org/qsl/qslin.html has information on this side. (you
do NOT have to be an ARRL member to use the incoming bureau)

It is possible to send your outgoing QSLs directly to the foreign
bureaus, without being an ARRL member. A list of foreign bureaus is on
http://www.iaru.org/iaruqsl.html. Just box up all the QSLs for a given
country and mail them to the address for that country's bureau. That
method can get pretty expensive though, especially if you aren't working
very many stations in each country.

>WB5KYK/QRP

Be sure, that the given foreign "qsl-manager" is sending from his
country!

My call DK4VW is used as postal address - mail drop - for the
clubstation RK2FWA - RW2F in Kaliningrad, Russia.

Many request from the states arrive with me with SASE having
German stamps fixed on.

Since I am forwarding all letters from time to time on safe, private
channels to Kaliningrad and all requests are answered from there,
these DL stamps are of no use! Some SASE have even US stamps on!

So: Via DK4VW a green stamp or IRC is prefered.
(by the way: Postage from DL is 3.00 Deutsche Mark = 1.6 $)

Other German calls given as qsl-manager for Russian stations handle
also like me, e.g. DF4BV for RA2FBC..

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

>stations won't QSL. If I use the QSL service, should I be concerned
>about a large percentage of stations not QSLing because they didn't
>receive return postage?

Most countries that have incoming QSL bureaus also have outgoing QSL bureaus. My theory is that all stations will QSL... eventually... via bureau. It's a common courtesy to answer a card that you receive.

>2) QSLing directly using a callbook address, if found.
>What is the custom with regard to return postage when QSLing foreign
>stations? How do you include return postage since other countries mail
>service won't accept a foreign (i.e. U.S.) stamp? with an "IRC"? what
>is an "IRC"? Do most countries accept IRC's?

QSLing directly is mainly for working rare countries that you hardly ever hear on the air, special operations, and expeditions, you might also want to QSL direct for those last contacts you need for DXCC/WAS/WAZ/etc.

When you really reeeeally reeeeally want a card from a station, you enclose return postage and a self addressed envelope, so that the other station simply has to verify the contact, print out the card, and take it to the post office. This is done in two ways: the first one is to send one or two dollar bills, most countries have offices which will readily exchange USD into local currency. However the best method is to use IRCs, since IRCs can only be used for postage and pose less of an attraction to mail raiders.

An IRC is a coupon which you purchase from your local post office, and is recognized worldwide by countries belonging to the Universal Postal Union. An IRC is "universal postage" for one letter via air mail, and yes, most countries do accept IRCs.

>What general advice does anybody have on how to best QSL DX stations?

Patience. Don't expect to get all your cards answered at once. Many will come within a few weeks, others within a few months, and others might actually take a few years to come back to you... always keep in mind that you have your entire life to earn that diploma you want... so what's a

few months wait?

After some thought, I could not resist replying to the QSL problem....

I would suggest using ONLY direct QSLing....with a Self Addressed Envelope enclosed, and IRCs. I had an amazingly good return rate when I did that...a few years ago, getting my basic 100 DCXX.

ON THE OTHER HAND, for a "Basic 100" the cost and effort isn't to bad, a friend of mine is big DX guy, and says my method would be impossibly costly for him....but then, he is dealing with over 200, and on every band, etc.

So, I return to my idea...IF you are just getting started, or perhaps don't think you will EVER get really carried away...as my friend is...I STILL think my idea is good and will work. If you are "in the bureau" here in W7 land, the postage from the buro adds up, and you get monstrous piles of QSLs you neither want nor can use!

These days, I work almost all on the WARC bands, where DXCC is an Endorsement to a FIVE band DXCC, and the pressure to QSL is much less. Also, I am about the only CW OP in a Washington State County that is in some demand. I don't need QSLs anymore...my DX friends do....so I have them QSLL direct (CBA only) and promise to "direct" back. The few that respond to my conditions enjoy absolutely sure reply, and I happily pay the 60 Cents US to send to them! AND I do not have that huge pile coming from the Buro.

Isn't that rather unfair to the DX stations who need *your* QSL?

A fair number of DX stations are working on WAS and USA-CA (worked all
U.S. counties), and really want your USA QSL card. Especially if you're
a W7; W7 is relatively difficult to work from Europe.

I suppose it's your station, and your right to set your own QSL policy.
(there has, in fact, been a robust debate on this subject on the
contesting reflector from time to time - and some stations have
specifcally stated they will not answer the CQ of a station that's known
not to QSL) If you're in a rare country, and make tens of thousands of
QSOs a year, bureau QSLing may not be practical. But remember how
anxiously you awaited those QSLs when you first got your license...

>Isn't that rather unfair to the DX stations who need *your* QSL?

>Doug Smith W9WI
>(who replies to about 1,500 incoming QSLs every year)

How fair is it to a DX station that doesn't collect cards ? Let's say
ZD8Z likes to contest but has no interest in DXCC, WAS, or any
other awards. Should he foot the bill for envelopes and postage
for everybody who needs his card ? I don't think so, but I'm sure
that somebody who needs a ZD8 card does..... Is it fair to expect
that since he worked 4,000 stations in a contest, he's obligated
to buy 4,000 envelopes and 4,000 stamps ?

I think the fairest way to do it is if EVERYBODY pays for their own
awards, i.e., if you need a card from me for your DXCC, you send
me an SASE. If I need a card from DM for my W.A.S., I'll send him
an SASE.

We seem to forget that the bureau isn't free.... If someone in Guam
wants to send out bureau cards, they must first join the ARRL. Then
they have to pay the postage to get the outgoing cards from Guam
to Newington, and include whatever the ARRL is currently charging
($6 a pound?) for outgoing cards. If we send 1,000 cards to the JARL
bureau in Japan from Guam, the postage is about $26.00 for surface
mail. Cards cost $34.00 per thousand. So working JA's in a contest
costs $60.00 per thousand contacts via the bureau.

Happy New Year,
73, Jim KH2D

Now Doug....I NEVER deny anybody my QSL. I do ask domestic guys to send me a SASE. The DX guys ....every one of 'em....get my standard answer....."QSLL CBA ONLY, AM NOT IN BURO, SRI. BUT QSLL DIRECT SURE FB". If they seem to be English qualified, I even TELL them I'll be happy to pay the postage back, just send the bloody thing to me direct. Can't be easier than that.

I do NOT handle 1500 QSLs a year, thank Ogar Mung, as I choose to operate, not do book-keeping, and also find the cost too much. No, I do not need a shovel full of assembly line QSLs a month, but if a guy will just step out and send me direct, I guarentee a reply. I received an E-Mail asking if I got a QSL, yes I had, and replied....apparently it "got lost"...no problem, I sent him another!

I should know better than to get into it about QSLs....I just wanted to try and help, with MY twist on the handle of the Sticky Wicket! 73 "DM"

Hello Wayne,

I realize you meant to ask about DXCC and got a "smart guy answer" from
"dm".

DXCC is DX Century Club.

It is a group of awards given for proving you have worked and confirmed 100
DX countries.

It is a real big deal to some and is run by the ARRL. The "Board" decides
which countries count"
by a nifty set of rules. The number of total DXCC entities is subject to
constant change and that makes it
more interesting

Radio Shack has now a really nice - wireless - indoor / outdoor
thermometer that so far in my shack shows no interaction with my TS450S and
AL-811H. I also have an HTX-212 45W 2M mobile rig in the
shack and it also does not affect the thermometer. The indoor unit has
huge easy-to-read numerals and operates on 433.3 Mhz. Selectable for F
or C and is quite handy when giving out those DX / WX reports over-the-air.

DXCC is ARRL's DX Century Club. You become eligible for DXCC when you have QSLs from 100 of the countries on ARRLs DXCC country list. There are some 330 countries. You can continue to send cards to ARRL until you have worked them all. Standings are published periodically.

>
>"Slovenia"
>
>and be presented with all the prefixes that mite be used by the hams
>in that country.

I don't think you understand what you are asking for Le Roy.
For example if (like you say) you wanted to know all the prefixes
that France has allocated to it:

F1, F2, F3 ,F4 ,F5, F6, F7, F8, F9, F0, aannnddddd
FB1 FB2 FB3 FB4.....AAANNNDDD
TK1, TK2, (by the way, you do know that the # is part of the prefix
don't
you, everything after the # is part of the suffix)
TM1, TM2, TM3, TM4.....AAANNNDDD
TO1, TO2, TO3, TO4,.....

But wait, there is a very simple way to have this info right
at your finger tips ALL OF THE TIME even if the Internet is
down for the count or you can't logon because too many others
have taken up all the phone modems and you get busy signals.

Here is all you have to do: first, buy yourself one of the official ARRL
logbooks. (it has the table of allocations in the back). That means that
if you hear a TV1VV on 15 meters you can look in the back and see that
this prefix belongs to France. It won't tell you that it may be a special
callsign issued to Jo Bob Briggs from Monster Vision who is on
vacation in Reunion Island (and had the bucks or knew the right people to

get it). But it will let you know that where ever he is, the place is
under
French rule.

Next, go buy yourself a copy of the Radio Amateur's Callbook CD-ROM.
(Also Known As the Flying Horse CD-ROM) It has a listing just like
what you described by country {hey it even has them by prefix too).
Now it doesn't show ALL of them, it does show what I call the
Main Stream prefix of use though. It will tell you that FR5DX/J
means he is on Juan De Nova, or if he is signing FT8X/FR5DX
then he is on Kerguelen Is and such stuff as that.

Together with the info from the Table of Allocations you will be just
like those guys that seem to know where every guy is. You will

amaze your local ham club buddies BECAuSE>>>> when the
local ISP is down, or AOHELL has crapped out, or the Lan Administrator
is in the back office with the secretary while hackers take out the
system files, THHEENNN, you can amaze them because between
your paper logbook sheet and the prefix info on the CD-ROM,,,,
what can I say, you'll be considered a Master Guru among
all those that can hear you while giving out the words of wisdom as
they frantically keep trying to connect to the Internet and see if you
are right.

Don't want to shuck out $49 + S/H for the CD-ROM so you can
rub the other club member's noses in something? Then I know just the
guy for you to talk to. Get with Bob, WB2YQH of The 59(9) DX Report
(or e-mail him at: The599Rpt@aol.com) for a cheaper price. Just
think how those club members will feel when they find out you were
able to get yours for 20% cheaper.

But lets say you hear a station signing TO5MM. There is no place
I know of that would let you know that this is Doug on one of
the french rule Islands of Martinique (or was that French St Martin?)
Anyway, hope you get the picture that these WPX calls, Y2K calls,
contest calls, special event calls, my club is having a BBQ calls,
are not where you can find them easily unless you want to read every
bulletin and announcement and write it all down. In that case, just use
a search engine and look up the call. Hope this has helped.

73 & GUD DX (any PX you like it with)
Jack

49. Electronic Log Books What's Good/What's Not?

Newsgroup: rec.radio.amateur.dx

I would like to use an electronic log book. I have downloaded several demos. Some of them look like old DOS stuff and I do not want that. I could not get the Log Windows Demo to work because of a com port problem. DX 2000 only lets you download help files and I don't want to spend that much money unless I know something will work. The only working demo I have now is "DX 4 Win". If you know of something good please recommend it to me.

Thanks and 73's

While it is true that DXbase 2000 does not have a traditional demo I can testify as a user that it does run and run well without any errors since I have had it here on my computer the past few months. I too have tried and owned several loggers and DXBase 2000 is far and away the most comprehensive logger yet very intuitive to operate. It is also one of the very few true 32 bit loggers. It is a true Win9x database program which uses the robust Microsoft Access database engine. If you study the downloadable help file you can learn everything you need to know about the product. I have a link on my website to download the DXBase 2000 Informational Demo. I really feel from my experiences in trying several loggers that DXBase 200 is the Cadillac of them all. I believe the owner (Jack Lennox) has a money back guarantee if not satisfied. I seriously doubt he has needed to make good on that yet..... 73 / DX

53. Log Windows 3.06.50 now released on the web!

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-05 00:00:00 UTC
From: Rick Ruhl - CSS <ricker@cssincorp.com>
Message-ID: <nZNc4.6444$Ak.85963@news1.mia>
Source record: 22303
Cross-posted to: alt.ham-radio.packet,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

LogWindows 3.06.50 Shipping
Program available from Ham Dealers, CSS and the web
Muscle Shoals, Alabama. January 5, 2000: Creative Services Software announced today that the first update to LogWindows in 2 years, version 3.06.50, is shipping.

CSS is selling the program through dealers, direct sales and the web. The program retails for $49.95. CSS is offering upgrades to current users of the program for $25.00, as well as a competitive upgrade from other logging programs for $35.00. Once the 32-bit version is release, the upgrade price will in be $40 for the 32-bit version ($55 competitive upgrade) from the 16-bit version, but will remain at $25 for the 16 bit version upgrades. Price for the 32-bit version will be $79.95 with free 1.x upgrades.

"If someone purchases or upgrades to LogWindows 3.06.50 now, they'll not only get all the future 3.x upgrades, but also a FREE upgrade to the 32 bit version of LogWindows when it becomes available. So for $25 investment now, they are saving money in the long run", said Rick Ruhl,. President and owner of Creative Service Software.

LogWindows 3.06.50 is now on the web at http://www.cssincorp.com/logwindows. This version is a combination demo/release version, which will allow everyone to look at the new version of LogWindows. Once you have purchased the product you can enter your call sign, serial number and activation key in the registration screen and use the full capabilities of the program. Installing the demo version will overwrite any current version installed on the system.

Creative Services Software is at http://www.cssincorp.com
Windows, Windows 95, Windows 98 and Windows NT are Registered Trademarks of Microsoft Corporation.

A couple comments on Log Windows. It has no IOTA support whatsoever. It has no Internet DX cluster interface (telnet). It is still an old 16 bit program although there are plans for a true 32 bit version. Many of the other loggers will suit a DX'er much better then LogWindows. For a true 32 bit logger with every feature known to man check out DXBase2000 at http://www.dxbase.com

An acronym of some hex used by druids when the oscillator of their handies did not oscillate. Kind of "DC Exorcism". Is said to have been pretty powerful in its days, but the secret of the DCXX is lost. unfortunately. that's why more and more radio amateurs resort to buving commercially built equipment instead of homebrewing.

There were some old cordless phone that used a frequency between AM Broadcast and 160 Meters, around 1.7 MHz. It maybe a harmonic of this you are receiving.

Back about 20 years ago people sold cordless phones with base units in the frequency range of 1700-1800 kHz. The carrier was supposed to drop off when the phone was not in use.

My guess is that you have an old cordless phone somewhere within a mile of you that is not dropping off between calls. You are hearing the second harmonic of 1762.5 kHz. Listen to it for a while and eventually they will identify themselves. I've even heard people reading their credit card numbers over such phones. Once you know who it is, just send them an anonymous letter quoting sensitive details of their conversation. Tell them in the letter that you picked up the information by eavesdropping on their old non-secure, cordless telephone. If they have any sense they will dispose of the phone and your problem will be solved.

>How do you QSL through the bureau?

Check with your local ARRL affiliated club, they should be able to provide
all the information necessary.

Or if you prefer, there's a text dealing with how to use the outgoing QSL
bureau on the ARRL's information server. Send a message to info@arrl.org
with the words "send index" in the message body, you'll get back an index of
the files available on the server, in which you should find the one you're
looking for.

I suggest you look at the file itucalls.txt on the ARRL's information server
(info@arrl.org)... it has a list of ITU callsign ranges and the countries
they apply to.

This is a good start, but... For various reasons (mostly historical)
sometimes an "ITU country" can contain more than one "ARRL country".
For example, Alaska counts separately from the United States; Cocos
Island counts separately from Costa Rica. But as both territories are
run by the same government, the same ITU callsign blocks are used.

Which logging program is 'BEST' is question that has to be answered by the individual user. It depends on personal preferences, amount of computer skill the user has, what the users needs are, etc.

A logging program that is SUPER for a casual operator might be AWFUL for a very active DX stations - different people have different requirements.

Best thing to do is download a bunch of demo's, and then pick the one that you like best.

I tried quite a few demos & found they all had at least one fatal flaw. (couldn't copy information from previous QSOs - important to me because I will often make a dozen or so QSOs at a sitting on one frequency; limited award tracking ability; limited import ability (I operate many contests - a logger that can't import my contest logs is uselsss); whatever.)

I was then loaned an "unofficial" copy of Log Windows 3.0. It wasn't perfect, but it came pretty close and sure beat the heck out of everything else I'd tried - so I bought a legitimate copy.

Award tracking works quite well for DXCC, WAS, WAZ, and VUCC. This includes by-band tracking for DXCC, WAS, and WAZ. USA-CA is theoretically supported though in my experience that one didn't work very well. IOTA is not directly supported. (I suppose you could put IOTA references in the "remarks" field, export your log, and then use a spreadsheet to sort/count the IOTAs)

Many log import formats are supported, including comma-separated-variable which is what I use. Printing of QSL labels is supported. A "browser" allows you to query for contacts meeting certain criteria, including a date range, country prefix, CQ Zone, band, mode, state, or QSL status; it also allows you to exclude certain prefixes. The results of a query can be saved or printed.

Interface is supported to a TNC and to a callsign CD-Rom. (I'm no longer within range of a packet cluster so I've not made extensive use of the TNC support)

Version 3.0 is NOT Y2K compliant. (on a system that knows today is 5 January 2000, LW3 displays the date as 5 January 10 - delete a character and you can see it really believes the year is 100. You can manually overtype the date to read January 00 which is what I'm doing for the time being) I presume it's reasonable to assume 3.06.50 is compliant - Rick, for paranoia's sake can you answer that?

No, it's not currently a 32-bit program. Personally, I don't think
that's any big deal. I run a mix of 16- and 32-bit apps on both my
Win98 machine at home and the one at work, and I see little difference.
My ham shack runs under Win3.11 so I can't even use a 32-bit app!
(though that machine is about to get upgraded. A 486-66 w/8MB RAM will
do a reasonable job of running LW 3.0, but some functions - notably,
resorting the keys - can be rather slow)

I've not yet decided for certain, but I will probably be doing the
upgrade here.

Why upgrade when acceptable software is available for the hardware I
already have? I'd rather spend the money on radios! (but as I send out
over 1,500 QSLs a year, paper logging - more importantly, manual QSLing
- is not an option!)

Hi Charles,

Firstly, I'm glad that you have a fairly good Microsoft experience. I suspect that most normal users do have such an experience. However, as someone who works in a professional software development environment, and who uses Microsoft products every day, I can assure you that at times their quality control is less than effective. I regularly have to reboot my Windows NT40 system because it mysteriously hangs - clearly not a situation that you want to happen if you're running mission-critical applications! However, my biggest personal bug-bear with Redmond is that their software is definately bloatware - everytime the next version of a product comes out, it's 'n' times larger than the previous version - I sometimes think they're in colusion with the disk manufacturers! Still, having said that - I guess no software is completely problem-free. (Although Unix variations do seem to be more robust, but that's of little comfort to the general ham radio community.)

I have no extensive experience with MS Access, other than as a user. However, for logging purposes - particularly real-time or contest logging - I have found that Access is too slow for my own preference, which may be one of the reasons that most really fast logging programs avoid using it. While it is nice to have your QSO data in a QSL-conformant database, it strikes me as being overkill - so long as the data is safe, I'd prefer a 'lighter' database management system. Just my humble opinion.

73, Darrell.
NR3Y.

I have to agree in general with Jim's observations. However for my own needs
and after trying all the major loggers out there I feel semi-qualified to
recommend DXBase 2000 to others. I have a link to the demo on my website
on the SOFTWARE page. 73 / DX

Access itself is definitely serious bloatware.

The Access file format is the native database format of Visual Basic,
and in itself isn't really a problem. (we have an application at work
for tracking school closings that uses this format, and is quite fast &
reliable)

The vast majority of real-time contest logging is done under DOS.
Programmers say they can't write reliable CW-sending software to run
under Windows - and especially under NT which doesn't let you at the
hardware. (for reasons that are good if you're writing high-reliability
applications, but not so good if you're trying to make the hardware do
something it wasn't designed to do, like send Morse Code!)

A GPF during a 200/hr run wouldn't help the score much either. Quite
simply, serious contesters don't trust Windows. If Linux were easier to
configure (most serious contesters are also rather computer
illiterate..), a Linux-based contest logging program would probably make
serious inroads.

You bring up some good points but I have to take exception to the
'bloatware' remark and here is why. With processor speeds always on the
climb and hard drive space dirt cheap I don't feel the bloatware argument
has the substance to it it may have had say 5 or so years ago. DXBase2000
takes up about 27M installed. I have 11.6G to use. Do I mind that it is 27M
or that some other logger might be more or less? What is a 27M disk space
requirement in the age of dirt-cheap gigabyte drives?
The other point I do agree with is in speed. While I do not contest I have
witnessed the pace that serious contesters operate at and I can see where
speed would be important. Whereas DXBase2000 I feel is the Cadillac of
logging software for general logging and dx use I would concede that a
single purpose contest logger does have it's time and place. Thanks for
the nice reply..... 73 / DX

Hello All and thanks for reading.

I am the 5th District QSL "P" suffix sorter and I have several cards for
W5PWG who was QSL manager
for J8DX back in the late 80's early 90's before he became a silent key.
Does anyone have a route for J8DX or is anyone still handling these cards?

Tnx /73

Well, that's an artifact of your QSL bureau -- in VK it costs nothing
to collect your cards.

I use a 25 MHZ 386 with 80 Mb hard disk and a whopping 4 Mb of RAM, hooked
up to an amazingly huge 14" monochrome monitor... and the only paper logbook
I have is the copy of my electronic logbook I take out every once in a while
just in case...

Logging's just more fun in DOS :)

All I'd need to do is add another split screen window for it to either
connect to two comm ports (two TNC's), Pakratt/Pkterm and a Comm port or
either of the above and a Telnet connection.

So the answer is yes, it will.

You can get quite accurate timing under 95/98 without direct hardware
access -- good enough for accurate MIDI music playback. It requires
some very ugly hacks, though. The same hacks don't work on NT though.

Linux real-time support is very nice indeed.

Nonsense. Microsoft would not lose a measurable amount of income
by releasing their source code freely. Joe User like yourself would continue
to pay top dollar for it. Microsoft could even benefit as the user
community develops fixes for the many thousands of bugs.

My Microsoft bashing is not "tall poppy syndrome" -- it is because
these products are holding back the state of the art.

Thanks for the nice words Rick. I will be re-evaluating LW once the 32 bit version is out . How are the prospects looking for IOTA support in the 32 bit LW? 73 / DX

Great Rick...BTW I have a nice fixed width true slashed zero font that
works great for discerning O's from 0's but LW does not list it in the
available fonts so I am unable to use it in LW. If you like I would gladly
send the font along to you or you can grab it off my site for any possible
inclusion with future LW versions. 73 / DX

113. Question about validity of repeater QSO's

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-07 00:00:00 UTC
From: Don Ware <dgware@voicenet.com>
Message-ID: <yrR2OGrEZj5VpZCiyWxxe1ukTo9=@4ax.com>
Source record: 22345

I live in PA and need WV for my W.A.S.

There are linked 70cm repeaters that make this contact possible.

Is a repeater QSO recognized ?

I'm inclined to think NO.

I assume a direct simplex 70cm QSO with NJ would be OK.

Tnx, de KB3DMA

Thanks Charles. These comments from you mean alot to me. :) We're trying our best to do the right thing with software products, and I know you were a big LogWindows supporter for many years.

You know, I have talked to Jim and Jack about support Dxbase 2000 in Pacterm/Pkterm. I know they got tied up with Dxbase for dos and the Y2k issues, so hopefully they can re-examine it in the near future.

As I've said before, we'll continue to support other logging programs in our TNC product.

You're correct to assume no. The problem is that the repeaters are
doing most of the work - you are actually working the *repeater*.

> I assume a direct simplex 70cm QSO with NJ would be OK.

Yes. Because your signal made the complete trip to NJ - there was no
assist from a repeater in PA.

I think all stations with "/y2k" or "/2k", also as M`something :) are OK
via RSGB.
I worked few stations (M0KBK, G.../y2k etc) and info was the same: RSGB.

Not so big help :(:)

Hi,

Anyone got direct address for SP3WVL or is it buro only please??

Cheers, Bill G0VDE.

>to collect your cards.

In TI we have the same policy: no charge for collecting your cards... and at the present we have around 750 cards which are pretty much stale sitting around. The reason? It does cost to collect your cards: it costs you a trip to your local QSL bureau and a fraction of your day, especially if you live at a considerable distance.

I have successfully used MS Access to manage outgoing QSL bureau cards,
manage club member information, generate mailing lists, a whole lotta
interesting things... but I'd never consider using it to manage my logbook.
Darn thing's just too difficult to use for real time logging: press tab to
switch from one place to the next or the arrows if you prefer, but if you
start typing in something the arrows no longer work, and if you mistype
something the thing beeps at you and you have to type it again... I'd hate
to see someone working a CQWW like that.

Access has it's power... but it's just too much power for something like a
logbook. For that there's ready made programs that do the job very nicely,
and will run more than fine on any old PC you might have sitting around.
Basically anything you can do with MSAccess someone has already put into a
logbook program that's available for download on the net.

Well, I agree that disk space is dirt cheap and all, but it seems to me
that, at the height of the technological revolution and into the 21st
century and all we should have a basic notion of how to optimize our
computer programs correctly so that they don't take up as much space as they
can.

LEGAL CABLE TV DE-SCRAMBLER

Want to watch Sporting Events?--Movies?--Pay-Per-View??

*This is the Famous R-O Shack TV Descrambler
You can assemble it from Radio Shack parts for about $12 to $15.

We Send You:
1, E-Z To follow Assembly Instructions.
2. E-Z To read Original Drawings.
3. Total Parts List.

**** PLUS SOMETHING NEW YOU MUST HAVE! ****
Something you can't do without.

THE UP-TO-DATE 6 PAGE REPORT:
USING A DESCRAMBLER LEGALLY

Warning: You should not build a TV Descrambler without
reading this report first.

Frequently Asked Questions--CABLE TV DESCRAMBLER

Q: Will the descrambler work on Fiber, TCI, Jarrod
and satellite systems?
A: The answer is YES. In respect to satellite,
you just get more stuff! There is one exception:
The descrambler will not work with DSS satellite.

Q: Do I need a converter box?
A: This plan works with or without a converter box.
Specific instructions are included in the plans for each!
Q: Can the cable company detect that I have the descrambler?

A: No, the signal descrambles right at the box and does
not move back through the line!

Q: Do I have to alter my existing cable system,
television or VCR?
A: The answer is no!

Q: Does this work with my remote control?
A: The answer is yes. The descrambler is
manually controlled--but very easy to use!

Q: Can you email me the plans?
A: No the program comes with an easy to follow picture guide.

Q: Does this work everywhere across the country?
A: Yes, everywhere in the USA plus England,
Brazil, Canada and other countries!

Q: Is this deal guaranteed?
A: Yes, if you are unhappy for any reason we will refund your money.

Q: When I order, when will I get my package?
A: We mail out all orders within 24 hours of receiving them.

Q: How much does it cost to get the instruction
plans, the easy to follow diagram, and most
important of all the "Using a Descrambler LEGALLY Report".
A: You get the complete 6 page report and instruction package all for just--$10.00

Q: How do I order?
A: Fill out form below and send it, along
with your $10.00 payment to:

Cabletron FREE-TV
12187 S. Orange Blossom Trail #116
Orlando Fl 32837

(Cash, Check or Money Order.)

(Florida residents include 7% Florida State Sales Tax)

(All orders outside the U.S.A. add $5.00)

PRINT YOUR:

NAME_____

ADDRESS_____

CITY/STATE/ZIP_____

E-MAIl ADDRESS_____

We are NOT ASSOCIATED in any way with RADIO SHACK.
Neither the design nor instructions were developed
by, are sold by, or are endorsed by Radio Shack.
Parts for this fine-tuning device are available
at many electronics stores (including Radio Shack)
This is not a Radio Shack product.

Hi Don,
ARRL WAS Award Rule #7 states "Contacts made through "repeater" devices or any other power relay method cannot be used for WAS confirmation. A separate WAS is available for Satellite contacts. All stations contacted must be "land stations". Contact with ships, anchored or otherwise and aircraft, cannot be counted".

Hope this answers your questions 73 Murray, K3BEQ, WAS (Local MDC) Awards Mgr.

It certainly does seem silly!

I suppose it *MIGHT* be invalid for specific-mode WAS - for example, if
someone wanted their WAS endorsed "all phone". "Crossmode" QSOs, where
one participant uses CW and the other phone, are not unheard-of.

In VK (at least in VK3), you can arrange to have your cards given
to a 'distribution point', who is a member of your club and brings all
the cards for club members along to the club meetings. Or you
can collect them from the office.

Same in Belgium. Bring your card to the monthly clubmeeting, drop them
off and pick up incoming cards.. and all include in the price of
membership to your national society.

Happy Y2K

144. Re: "Mode" versus "2-Way Mode"

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-09 00:00:00 UTC
From: Steve Jepsen <jepsen@Nospam.com>
Message-ID: <387915ec@news.continet.com>
Source record: 22426

From Section 2 of the W.A.S. rules:
Two-way communications must be established on amateur bands with each
state. Specialty awards and endorsements must be two-way (2X) on
that band and/or mode.

>bureau. It's a common courtesy to answer a card that you receive.

And it`s the best way. Here in YU we have a bureau and it works fine! Few
times a year we are getting (Y)our cards, but we can send our card whenever
we want!
First what I have learned was: "Write QSL as soon as it possible! Your
unknown friend will be happy to receive it!" It was so long ago... Today - I
write QSL for (almost) all of my QSOs!

>>2) QSLing directly using a callbook address, if found.

>QSLing directly is mainly for working rare countries that you hardly ever
>hear on the air, special operations, and expeditions, you might also want
to
>QSL direct for those last contacts you need for DXCC/WAS/WAZ/etc.

That`s the point, indeed. There is a lot of your stations (K,N,W,A) but not
too much XW8SMT, for example! Also, if you like your "hobby" - what is too
expencive?
Or... Which hobby is cheap? :)

>>What general advice does anybody have on how to best QSL DX stations?

Dear Mario.. I hope to meet you somewhere between 160 and 10m..
This was so nice... It has to be written on every callbook, ham guide etc.
I must say it again for all of us:

WE HAVE OUR ENTIRE LIFE TO EARN DIPLOMA WE WANT... SO
WHAT`S A FEW MONTHS WAIT?

So, my dear friends... I wish you all good healthy life, with your family,
many, many qsos, and lot of happines!! If you ever hear me on SW, don`t
worry abt QSL card, but... Send me your QSL, too!

Come to visit me! Be my guest! :)

Best regards from Yugoslavia!

Maybe for that diploma...
But what about awars hunters? Thousands of letters? :))))
We do not have THAT long life :)))

I can`t imagine... Someone (normal, civilised, averagely :) smart...) made a QSO.
WHY? (Enigma song: I`m asking WHY!?) WHY is so hard to write a qsl card and put it at the place made for it (in radio-club i.e) or somewhere onto your desk... After few days, week...Send it! Why not?
I could understand far countries, or countries with not solved question abt send/receiving QSL

Till now, best "QSL writers" are Russian (and ex urrs) stations.

Have a nice time today!

>costs $60.00 per thousand contacts via the bureau.

Guam is Guam. Unfortunitly. :(There must be a solution for all countries,
stations.
Imagine this: before several years (in 1900 and some year.. :)))) who
could made a simple QSL card? And how much did it cost us? Today -
computers, printers, cheap paper, colours...

You worked JA stations in JARL contest. very nice! Lucky you! How many
stations have you worked? I`ll be glad to change with you! :))))
Why not to receive hundreds of JA qsl cards?
Aren`t you, at last, so proud of it?

You should be!

I wish you all the best!
And to the all others in this NG....

>Why not to receive hundreds of JA qsl cards?
>Aren`t you, at last, so proud of it?

Well, Uf, it's no trick to work Japan from here. Just like you working
UA's. But, contrary to popular belief, there are a limited number of
JA's on HF. So every contest we work the same guys, over and over.
And unfortunalty, JA's are programmed to QSL - every contact. If they
work you once on 15 meters in a contest and dupe you twice, they
will send you three cards (via the bureau). If they work you 11 times
on 15 meters in 11 contests, they will send you 11 cards.

Most hams in Japan spend a lot of money on QSL cards - nice cards,
usually with full color pictures. When I get 600 card from the JARL
bureau, no, it doesn't make me proud. It makes me sad that they
wasted their cards sending them to me, because I don't collect cards,
and if I did, I don't need 600 cards from Japan for 15 meter contacts,
I would only need one or two.

Granted, a QSL card can hold memories of a special QSO. But what
is special about '5NN 27' ? Not much... So since contest Q's aren't
specail, and I don't need a thousand cards from the same place, I
usually toss them in the dumpster, and that makes me sad. I'd rather
they didn't send me a card (unless they REALLY needed one from
me) and I'd rather have them save their nice picture QSL's for some
other ham who collects cards and would appreciate them.

I really think that if everyone sent cards only when they REALLY
needed one back (instead of as a reaction to a log entry) it would
increase everyones chances of getting the cards they really need,
and give the mailman a break......

>I wish you all the best!

All the best to you too, Uf.

>And to the all others in this NG....

I'm not sure if I'm ready to make that plunge yet, let me think about
it for a while.

Hi John, here's the comments you asked for:

First, the lettering is WAY too big. I usually sit in front of the computer and read web pages, not stand on the other side of the room.

Second, you seem to take things WAY too seriously. Lighten up and enjoy life. Take a refund, go buy another antenna. Be happy, don't worry..... Mosely never was famous for great antennas anyway..... You made a mistake. Don't waste the rest of your life worrying about it. Get over it.

Third of all, catch up on current events. For practical purposes, Mosley went out of business about 4 years ago, ham business anyway......

If you are as nasty on the phone with Mosely as you are on the web page, then no damn wonder you can't get anything done. Take some advice from my mother: "You catch more flies with honey than you do with vinegar".

Sorry to hear you spent so much time up on the tower. I heard a good yagi tip you might be interested in, for next time. Assemble the antenna (on the ground) the then point it straight up in the air. Check the SWR - it should be the same as what you get when the antenna goes up in the air.....

Anyway, sounds like your dipole is working pretty good, and bet it didn't cost $5,000 either did it ?

Yes, and why not? In some countries (I think, old OK belonged to them,
I don't know about the new licensing rules there) it is/was mandatory
to provide proof of a certain time as SWL before one could apply for
the radio amateur exam - in other words, one had to submit a certain
number of conformations of SWL reports, among them a substantial fraction
from abroad.

Amen!

What I have not figured out... In my last bureau shipment, I received *four* QSLs from the *same* Czech SWL -- all for different dates -- none specifying who I was working (which makes them VERY hard to verify<grin>!). And, I received a fifth card bearing the same name and address and for the same date and time as one of the SWL cards -- but this one bore a "regular" call OK2BHE.

I suspect he used the wrong stamp & meant them to be OK2BHE cards; one of other dates on the SWL cards also corresponds to a QSO I had with this station.

ZK1VMM (LA6VM) was on Rarotonga Island in South Cook together with ZK1DLL
(LA9DL) and ZK1XKK (LA7XK). QSL to all of them is to home call, direct or
via buro.

LA6VM and LA7XK were also active from Tubuai Isl. (Austral Isl. Group) as
FO0WII and FO0ERI respectively, from 2. jan 2000 to 7. jan. 2000 QSL here is
also to home call.

IOTA for Rarotonga is OC-013 and for Tubuai OC-152

After much deliberation, I have accepted the invitation to be the editor of the "DX Forum" column for 73 Magazine. I am quite excited about this, and intend to devote a great deal of energy to this endeavor. As I look back over my short 36 years of hamming and shortwave listening, it is DXing that has sustained my interest and devotion to our hobby. Now I get to write about it, too!

The first column will appear in the March issue along with an article I wrote on a shortwave listener's antenna that I designed while I was doing my radio show on HCJB. It is based upon the loop antenna article published by K6STI several years ago.

But enough about me, I want to hear from all of you. Please send your announcements, gossip, plans, and suggestions to me. My deadline is the 15th day of the month that falls two months prior to the actual publication of the magazine, so keep that in mind if you send me date-sensitive material about DXpeditions and the like. I also want to do interviews of DXers as well, so send me your suggestions as to whom you would like to read about.

Here's where you can send info:

Rick Olsen, N6NR
DX Forum - 73 Magazine
P.O. Box 538
Issaquah, WA 98027-0538
USA

or simply to, n6nr@arrl.net. You may send photos either in hard copy, or in jpeg format via the Internet. I prefer jpegs as I won't be able to return your hard copy photos.

That's it! I hope to hear from all of you soon. 73 es gud DX!!

de Rick, N6NR/7

168. Power Connectors

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-12 00:00:00 UTC
From: Ken Mirabella <kjm@flo-bin.com>
Message-ID: <Uqaf4.145$ze4.20945@typhoon-la.pbi.net>
Source record: 22203

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH
www.powerwerx.com

Ouch! I suppose at some point, these managers forget someone might actually want their own card...

I have also on occasion received, along with a PSE QSL card, a blank card from the same station. The only ethical explanations I can think of for that are sticky cards, and someone thinking it'd be a good souvenir. I can think of a lot of unethical ones<g>.

By the way, I received another bureau envelope the next day which contained your card for the Field Day QSO with K4FUN. I clearly remember the QSO but it may take awhile to respond while I try to come up with a K4FUN blank card. I was being a "mercenary" - I am not actually a member of that club. (working evening shift makes it rather difficult to participate in any local club!)

Add shipping, then UK import duty, 4%. UK VAT (payable on private deals too) 17.5%.
You can not declare the rig, avoiding duty and tax, but it is illegal.

I don't see why we should pay duty and VAT on private transactions, but we still have to.

My card has a box titled "two way", but it also has a box
titled "confirming qso with". If your card says something to
the effect that you are confirming a qso then it would have
to be "two way". If so, your card should be good for the
WAS award.

That's dreadful. VAT has already been paid at the time of original
purchase -- you shouldn't have to pay it again.

We're getting a GST here in VK mid-year. Should be interesting ...

Sure, 5 simple steps to building a linear amp:

1. Get a tower
2. Get an excellent antenna
3. Get some serious feedline
4. Upgrade to a good transmitter
5. Upgrade to a KW+ tuner
6. Check the ARRL Handbook, which has an entire chapter dealing with
amplifier proyects.

Warning: skipping steps 1 through 5 may result in a nasty, splattered,
RFI-filled, inefficient station...

195. New Internet PacketCluster Site more.....

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-14 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <85ns5bajt1@nnrp1.deja.com>
Source record: 22227

As a result of my earlier post inviting you to connect to the New Internet PacketCluster at KC0DJO in Duluth I have received several direct e-mails asking what software was required, how to 'do' telnet etc. So here is an explanation:

First you must be connected to your ISP!

If you are running Windows 95 or 98 you already have the needed telnet software. Simply open a DOS window as follows:

Click on Start
Click on Programs
Click on MS-DOS Prompt

In response to the prompt type telnet. It will look like:

C:\WINDOWS>telnet

This will generate a telnet window.

First click on Terminal then Preferences and put a 'check-mark' in the box for 'Local Echo' then click on OK. This is needed so that you can see what you type as AR-Cluster does not echo your commands.

Now click on Connect then click on Remote System...
This will open a box where you will put the address 209.32.226.63 in the space following Host Name. The Port should be shown as telnet and the terminal type will be fine as vt100. Now click on Connect.

Now the original information reproduced below should guide you.

Original posting:

You are welcome to connect to a New Internet Accessible PacketCluster at telnet address: 209.32.226.63

This AR-Cluster is located at KC0DJO in Duluth Minnesota and is part of the Midwest PacketCluster System.

At your initial sign on you will be asked for your call, name and QTH. Enter your QTH as 'City State' or 'City Country', e.g. Chicago IL or Oslo Norway so we can see where all our new friends live.

Enter HELP SET for information on setting or resetting your Location (Lat/Long), QTH and NAME.

You can send a cluster mail to the sysop with the command 'S KC0DJO'

73 and Welcome

Ron N5IN

SWL MULTI-MODE CONTEST 2000

DATE : from 01/06/2000 00h00 tu 31/06/2000 24h00.

CLASS : SWL Mono-op�rateur

MODES: CW-SSB-RTTY-SSTV

BANDS : from 10 to 160 Meters WARC included

GOAL : Logging each DXCC country by mode and bu band.

POINTS : 1 point for each DXCC country from the same continent as the
op�rateur ,
5 points for the others

MULTI : 1 point for each new DXCC by band and 5 points bonus for each DXCC
logged in the same band in the four modes.

SCORE : =somme of points for the band multiplied by somme of multi for
the
by band same band

LOG : Separeted logs by band .
They must include:
DXCC-DATE-HOUR-1stSTATION-RST-2ndSTATION-(except in SSTV)-
POINT-MULTI
Give a sheet with resume of all multi by band.
For receiving results himself , send with the logone dollars or
one IRC.
logs must be send before 30-AOU-2000 TO :
NOGENT MARC
F-11734
60 RUE Foch
57390 AUDUN-LE-TICHE
FRANCE
E-MAIL: marc.nogent@wanadoo.fr

CLASSEMENTS AND RECOMPENSES :

2 categories : one for the four modes, one only for SSB and CW.
One cup for the first of each category and a diplom for the first of each
country.

Good Luck.

197. 6m F2 skip yet?

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-14 00:00:00 UTC
From: Darren Ream <w5dke@arrl.net>
Message-ID: <387F84F0.A5030FB6@arrl.net>
Source record: 22229

I am a relatively new 6m operator and have been waiting patiently for the band to start having F2 openings, but so far 6m has produced only an ocassional sporatic-E opening. I've read that when solar flux reaches 200, the MUF should reach 6m enabling F2 propagation. Today, solar flux was measured at 209 and it's forcast to hit 215-220 Sunday or Monday. I've yet to hear a peep out of 6m when I thought it should be opening up. What other factors going into F2 skip on 6m am I missing? I've worked plenty of sporatic-E on six, but I certainly don't want to miss any F2 openings this weekend. What should I be looking for to tell if six is about to open (other than listening to beacons or other stations)?
Thanks in advance to all the exeprienced 6m operators replying to this post.
Darren

Ham Radio University - HRU2000
Babylon Town Hall Annex
Phelps Lane & Miller Ave
North Babylon, NY
Sunday January 23, 2000
9:00 AM - 2:00 PM

This is a special day of education for amateur radio. Many ham radio Clubs and organizations from the New York City-Long Island Section will have information booths. This is your opportunity to meet the local clubs and organizations and learn their activities, meetings and membership. There will be a free tune-up clinic, DXCC & WAS card checking, eye-ball qso room, a full VE session along fifteen technical forums with guest speakers from the NLI section.

Donation: $2.00. Spouses and children under 12 will be admitted free.

For more information via Internet: http://arrlhudson.org/nli/hru2000.htm

Contact: Phil Lewis N2MUN (631) 226-0698

FORUM SCHEDULE
10:00 - 10:45 AM
Session 1A -Amateur License Restructuring - George Tranos N2GA
1B -Packet- John Papson WB2CIK & Bob Anderson K2BJG
1C -RFI & SWR - Sid Wolin K2LJH
10:50 - 11:35 AM
Session 2A -DX - Marty Miller NN2C
2B -APRS - John Blowsky KB2SCS
2C -YL Forum - Diane Ortiz K2DO
11:40 AM - 12:25 PM

Message-ID: <VhQf4.248$p_4.21654@typhoon-la.pbi.net>
Source record: 22231

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in
radio and tube audio gear.

There are over 300 in the lot and the current bid is $15.50. I have
seen these go for over a buck a piece at hamfests and over $3.00 each
on the net.

Stock up now!

Don't miss out on this one!

Hi Eric -- to QSL via the Bureau you must be an ARRL Member -- for full details
--see URL:
http://www.ac6v.com/page2.html#ARRL
Covers both incoming and outgoing services.

QSL via another operators callsign means just that. Example -- an operator is
temporarily
in a remote location and wants all QSL cards sent to his/hers home call address
or a ham buddy. Or has a manager who handles all his/hers QSL chores.
Fill out the QSL card to the station call letters you worked -- but address
and send to the via callsign.

For the bureau via cards, I fill out my QSL card as follows:

CONFIRMING TWO CONTACT WITH:
DX2DX (via IK2XYZ)
ETC
and sort by the IK2 not the DX2DX as per bureau instructions.

Source record: 22240
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.dx

The following "A-1 Operators" stations were heard operating a North American contest in the DX Windows listed:

(Times listed are representative)

1835.3 W4AN 0227 16 Jan
1838.0 K3MM 0259 16 Jan
3791.0 W9RE 0216 16 Jan
1835.3 W4AN 0257 16 Jan
1839.0 N2FF 0330 16 Jan (Hudson Division Director)

The facts speak for themselves.

Note that N2FF, an ARRL DIRECTOR, can't even follow his own band plan.

The true A-1 Ops are those who know they are courteous, obey the Gentlemen's Agreements, and don't run their ham stations like commercial traffic stations, relying only on quantity derived from automation and voice recorders.

I've often wondered about the A-1 Operator's Club---is it another off shoot of some fraternity. How does one get into it---nominated? How... by brown nosing (or !) another A-1 op? I remember back when there was comotion within the ranks regarding that no new A-1 ops were being nominated and it kinda turned into an insiders club. I think that the requirements for the A-1 Op Club should be reduced and issued maybe for 10 contacts with Rag Chewers Club members and maybe endorsements for suceeding groups of contacts.

How about the Woof Hong club/society/secret fraternity? Maybe that ought to be brought into the light as well.

I'm a "member" of the A-1 Operator's Club but the club doesn't do anything except see to that you are sent a certificate of memership. Oh, yeah, that and 50 cents gets you a cup o' joe at your neighborhood McD's (if you can call their "coffee" "coffee"!). I was nominated back in 1978 by a member in the section I was then living in, Northern Virginia, and by a by a second fellow some six years later. In turn, I have nominated a number of people myself, but with one exception, I don't know whether or not they are members. There is no club, of course, but the "club" supports good operating -- whether on CW, sideband some other mode -- which includes being considerate, forming code clearly and cleanly (NOT speed!) and in general being an all around nice guy. But the only benefit of the "club" is being a member, that's all. Hey, you don't know if you've got a nomination on file and are just waiting for that second one!

> How about the Woof Hong club/society/secret fraternity? Maybe that
> ought to be brought into the light as well.

Aw, that's silly -- I mean, I joined the "Royal Order of the Wouff Hong" in 1966, at the tender age of 16, while at a division convention in Tarreytown, New York. It's really just a joke, at least the "secret handshake" and what-not are. If there is anything serious about it, I sure don't know!

Now, I would be curious about the Rettysnitch and whether there is a secret organization around it -- something like the "Knights of the Templar Rettysnitch" or some such organization! *That* strikes me as ominous (!).

73,

Joe, W2RBA

I have one. And in its ideal form the "club" is an OK idea, and should
work as you say.

But since its resurrection, as I 've said (and at least in the East) it
has become a who's who of ARRL employees, ARRL "position" holders,
contesters who know them, and contesters who are ARRL people.

If ARRL and FCC can claim 13 and 20 don't make good operators, neither
does ARRL membership. Yet how many A-1 ops are not affiliated in one way
or another ?

Boy I'm really glad you brought this to light...Its so unfair to have any organizations or awards that take effort to achieve. The ARRL should include with their membership card the following

DXCC certificate
WAS certificate
A-1 op certificate
Rag Chewers Award

the list goes on and on. They all take too much effort...and there are so many people who feel bad cause they don't have these yet..surely its cause the requirements are too tuff.

Just a thought

Here's a few of my personal favorites.

www.russianmafia.net.ru (and they speak english pretty good
since all that practice with the New York banks)

www.eskimosfrozenbehind.icepack.org (they are there pretty often
and do pretty good with just a 8088 and one of the dogs in a
squirrel cage running the generator)

www.rockabovewaterlinenow.oceana.net (this one you have to
catch at low tide)

www.iraniancameldung.com (what can I say, it speaks for itself)

(and the one I cyber-plop into every night)
www.wa4jtkknowsDX.net.net

(forgot this "CHAT" channel hiding under the Alphalpha 10K)
#/ VK0penguin.pooper.scooper on the under,a,pile server

73 and Gud DX (any way you like it, so, enjoy it while you like it)

Jack

You can find more info on QSLing via bureau on the ARRL's info server.

When you QSL via another operator's callsign, you make out the QSL as is
normally done with the callsign the person was using, but when you're
looking for a mailing address, you search for the other callsign. Happens a
lot with expeditions, contest stations and special events.

221. DX Cluster?

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-17 00:00:00 UTC
From: ti2dll@ti2dll.dynip.com
Message-ID: <slrn884dn1.6p.ti2dll@ti2dll.dynip.com>
Source record: 22253

Hi,

I've been using DX clusters through the internet for about 6 months now... but something tells me the internet is just some kind of a secondary pathway, and the clusters are actually made to be accessed via packet.

Could someone explain how the DX cluster work? Is it possible to access them via packet? If you don't have a cluster working in your area, is it possible to "telnet" to another area's cluster?

--

222. New Internet PacketCluster Site

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-17 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <85vpgnmqm1@nnrp1.deja.com>
Source record: 22254

You are welcome to connect to the New Internet PacketCluster Site at KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH. Please enter your QTH in the form: Chicago IL or Oslo Norway so that we will know where all our new friends are from! You will also be reminded to SET/LOCATION, that is optional but recommended. If you properly do set your location, then the cluster will calculate beam headings for you to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION -your call-

You can correct any errors using the SET commands.

For more information on PacketCluster including a Logon Tutorial and Command List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet connection. Its a huge advantage as then your logging program will monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions using software already a part of Win95/98:

First connect to your ISP.
Click Start / Click Run
In the box enter: telnet 209.32.226.63
Click OK

You should now be connected to the KC0DJO cluster.

Enter your call. If it did not echo, then you will have to turn on local echo. Click on Terminal / Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C
HELP

Welcome and 73 de Ron N5IN

For the most part the 'Internet DX Clusters' are accessed by Telnet directly
and respond faster then if you connected by conventional packet means are
somewhat more reliable. The actual nodes themselves are a hybrid mixture of
packet and telnet input. Besides being faster and more reliable where telnet
cluster really shines is in those areas where Hams may have no conventional
packet cluster node to connect to. Also telnet sessions permit you to select
which node in the world you want to connect to that may serve your needs best.
For example if I am interested in Pacific stations of an evening I will connect
to a California cluster via Telnet (N6VR). For daytime general cluster use I
connect to K5DXC in TX. for country - wide coverage in general.
For a complete world-wide list of Telnet DX cluster nodes with direct links
see the 'Ham Radio Links' page on my website listed below my signature. 73

225. FS: WONDERBAR RADIO FOR '57 CHEVIES - EXCELLENT!!! (fwd)

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-17 00:00:00 UTC
From: Louis <lou1@primenet.com>
Message-ID: <Pine.BSI.3.96.1000117213608.15919G-100000@usr06.primenet.com>
Source record: 22257

www.ebay.com item 238999733

FS: wonderbar Radio for a '57 Chevrolet Belair, 210 and all related
models. It is in near-Mint condition! It has very recently been
totally restored electronically. All new circuits, capacitors,
tubes and totally checked overy by professional radio repairman.
The chrome is in very excellent condition - extremely shiny!
Everything works on this very rare radio.
All metal is in
really great condition. No rust. All checked out and ready to play
in your classic car. ..
I can send along the receipts I have for all work done. It is still in
original box from repairman. Due to the age it i sold AS IS. However, if
it fails to work when
installed it can be returned to the repairman to be fixed at no
cost except for parts.
Chrome is truly excellent but it does have a couple of tiny 'specs'
on the knobs. No fading at all on the chrome. Very shiny. Black
buttons are mint. Needs nothing! Tops of tubes have a nice shiny
chrome on the glass. These were not chrome plated but are a natural
part of many tubes. Lettering on "Wonderbar" switch is perfect.

230. DX FANS LOOKING HELP...

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-18 00:00:00 UTC
From: Kivi <bank@takas.lt>
Message-ID: <861ogr$16r4$13@trimpas.omnitel.net>
Source record: 22262

Dear Ladies and Sirs,

Hello! At first we want to give our best wishes to
Yours dx radio organisation and also we wish You all the
best in the future!

My name is Arunas Bagdonas. I a 28 years old lithuanian
man, I live in Lithuania,in Europe. I am a PC and Multimedia
student, and I am a senior manager of our established "DX
Club". My friends students (this Club members) are DX'ing
fans in Lithuania. But we have a problem : we have not the
information about frequencies and radio stations, dx news
etc. who is very valuable for us, students and DX radio
lovers...

So, we (our Club) asking Yours help : please,
help us, students, and if You can, send us free
shortwave Utility stations (air, marine, military)
frequency list (book orCD-ROM) and 2-3 latest
issues of Yours country DX magazines, please....

Please, do it for us, lithuanian students, maybe like a
humanistic aid !

We hope, that You will help us and send us frequency list
and dx magazines !
We (8 students) will wait the answer from You !

Our address:

Arunas BAGDONAS
c/o DX Cl.
RAMYBES 5-37
LT-4930 ANYKSCIAI
LITHUANIA,
Europe

Best greetings from Lithuania !

Sincerely Yours Arunas

DX4WIN has persistent information in the Date, Band, and Mode fields from previous QSOs while you are working repeated contacts in one sitting. It time-stamps each new qso with the current time (from the PCs clock), but does not assume that the signal reports are the same. All sig reports default to 59 or 599.

DX4WIN also contains a handy feature by which you define the "tab stops" during data entry, so that the cursor only stops at the fields at which you intend to enter info during rapid-fire logging (for example: stop at callsign, sig report, and name, ignore all other fields.) IF you need to enter data in an un-tab-enabled field (such as the QSL manager field, or maybe the IOTA field, for instance) during one of these rapid-fire sessions, you can move to the field with the mouse and make an entry. Changing the tab definitions for another sitting or another event is merely a matter of setting radio buttons on a pull-down menu.

DW4WIN also has incredible flexibility in importing data - anywhere from a contest logger to an Excel spreadsheet. It also tracks lots of awards - but I am not an award-collector so it may be weak in that regard and I am simply unaware.

233. Need QSL-info!

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-18 00:00:00 UTC
From: gerca297@ida.liu.se
Message-ID: <862ruh$o0p$1@curofix.ida.liu.se>
Source record: 22265

I need the following QSL information:

QSL route or address of CM3ET

Address of CT2HOM
(Not in Buckmaster, QRZ etc.. Is there a Portugese callbook on the net?)

Reliable route to EP2MKO, I have sent 3 cards to RU6FZ without reply so far..

Address to or manager for UZ2FWC

Thank you in advance,

/Gert, SM5LWC

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in
radio and tube audio gear.

There are over 300 in the lot.

Stock up now!

Don't miss out on this one! Only 22 hours left to bid!

Hi Mike,
Yes there is a site for many DX locations by OH2MCN which can be found at
http://www.qsl.net/oh2mcn/license.htm

Once you get all your details worked out please let me know for The Daily DX.

Hi;

One lot of (250) 9 pin miniature tube shields. These are for the
12AX7, 12AU7 ...etc tubes. Current bid is only $10.50 on the entire
lot.

I have seen these go for over $3.00 each on the net.

This is the last lot I will have up. I doubt you will ever find a deal
like this again!

A story and request for advice -

As a CWer struggling to get my code speed up, I've found the 30+ wpm DX exchanges to be a stretch for my 20 wpm brain. Last night, I found a JT station calling CQ on 20M, and quickly (as possible, anyway) tuned up my ancient TS520 and found him again. Oddly enough, there wasn't much of a pile-up to be heard. Good thing, since I can't pick anything out of a pile-up. Especially when the op is cruising at 30 wpm! I listened to his exchange long enough to get the callsign and his basic operating pattern (he was your classic "UR 599 TU" ... [my rprt] ... "QRZ?" kinda guy). Then I called him at 20 wpm. I nearly fell out of my chair when he came back on my second call. Forgot to write down his report. Sent him a report that maybe wasn't garbled, heard him blast out another QRZ? and sat back to laugh at myself. Or, at least I *think* he was sending another QRZ ... I'd gotten brain lock-up by then, and he was calling for someone who didn't seem to be answering. I don't think it was my callsign, but at that speed, I'm not sure I would have known.

So - guess I'll find out if he considered it a complete QSO when/if I get a card back! :-)

Which brings me to my request. The JT was listed in QRZ, so I've got a direct address to QSL. No way could I copy any QSL info, and I don't see a listing in the QSL Manager database on QRZ. Two questions, then:
(1) does anyone know of a QSL route for JT1DA aside from callbook?
(2) any clue how many IRC's I should send to Mongolia?
or should I send "greenstamps"?

Thanks. Listen for me on the bands. Chuckle as you imagine my panic while trying to key out something intelligible.

Hi.

LOG EQF from N3EQF is great.
It covers DXCC WAS WAZ and TenTen.
It connects you rig's callbook cd and dxcluster.
It's NonWindows and runs also with smaler
hardware fast and nice.

Message-ID: <86c2fp$2fil$1@arachne.labyrinth.net.au>
Source record: 22279

Has anyone experimented with BeaconSee? See www.ncdxf.org for a link.
It gives a visual spectrum on the NCDXF beacon frequencies so you can identify
which beacons you can hear easily -- effectively you can see which
bands are open to where. It can also do multiband and control various
radios (works great with my ICOM).

A problem I'm having though -- I don't get very much contrast at all,
compared to the screen shots at the web site. It's even worse if I use
the CW narrow filter on receive; I just get whole white blocks.
Anyone else had problems like this? My input audio gain is very low
and it's not clipping.

Hi all

Logger is a pretty nice free program, but I forgot where I downloaded
it from. AC6V comes to mind, great site and that is probably where I
got it from. From all I heard the developer is more than willing to
help with tech problems, although I haven't had any. Free is nice but
if it doesn't do what you want it's pretty useless to you. Good luck

Dan

Try making a template using Word or Wordperfect....I found an article on the
web about a ham that used Word...I prefer Wordperfect and created a template
that prompts me for all the QSL card specifics. I set my template up to
print on Avery 5389 post card stock. If you want a copy of the template
I'll send it upon request.

257. Re: FT-1000MP Phase-out?

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-22 00:00:00 UTC
From: Bill Rothwell <bill.rothwellNObiSPAM@btinternet.com.invalid>
Message-ID: <05730fbe.98cef478@usw-ex0102-011.remarq.com>
Source record: 22289

Hi,

Just my ha'porth....

Got FT1000MP abt 3 years ago - super radio, but a (I think) a
...little....weak in TX section (only 100W out, and rated at 50W for
RTTY and continuous use). Note only 12 V finals.

Got IC775 DSP a few days ago, and amazed at it (so far....). 200W
continuous (28V finals) - measured in excess of 200W - and super RX -
if anything, filters work better than 1000MP, and DSP very good. Audio
reports (unsolicited) 'your audio sounds very good' - from FO5QB - very
DX to me - and one or two others.

Prices - in UK, can get 775 for a few £100 more - 1000MP is STILL a
super radio, but 775 possibly has an edge, at least the late models. I
expect it is the price, but I am surprised 775 has not sold a bit more.

I certainly hope they keep on with the 1000MP - but wish it was full
rated and 200W....Still, it is up with the best. Pity they did not put
full DSP on 1000D....

Just my thoughts and observations....
Cheers, Bill G0VDE.

I haven't finished mine yet Harv. Still collecting data for the charts.
My paper is on the subject of the ill effects suffered by DXers after
prolonged exposure to Penguin Poop and cold weather in conjunction
with RF fields.

One of my best case studies is currently active right now and I don't
believe I can accumulate enough raw data for a summary in time for
VISALIA. May be you have observed this phenomenon in the operator
V K 0 Mega Moron?

Body handling: HTML body converted to readable text

I there.

I use the serial-print function from Word to print
the back of qsl automaticly from the logfile.

The Log goes to dbase. From their I have a
excel makro sorting the call's and print with word
on a HP 6p right into the stack of cards.

Try AALog (http://www.dxsoft.com) latest version
is 1.1.0

Main features of AALog:

- Keeping multiple logs for single callsign as one
huge log.

- Keeping multiple logs that have different
callsigns with the overview of every log

- Logging functions
Entering QSO online as well as offline
Checking the database for repeated QSO
Directing the antenna and calculation of distance
to the corresponden
Editing the QSO database
Sorting the contacts made in the log by time,
callsign, frequency and mode
Filtering the contacts by many fields
Tracing countries according to DXCC and zones
according to WAZ
Detailed prefix list
Compiling a file with contacts data from multiple
logs
Printing the log

- Export/import facilities

Export to ADIF format
Export to text file
Exporting labels for QSL cards into a text file
(can define own QSL-label)
Import from ADIF format
Import data from OH1AA logger
Import any text file with clearly specified
positions for every contact characteristic

- Digital modes

You can use TrueTTY for RTTY and PSK31 and
CwType/CwGet for CW operations.

- External databases

AALog can get information from Buckmaster HamCall
CD-Rom, QRZ CD-ROM.

Also you can use qsl-managers databases QMGR, QSL Routes

- Help and documentation

AAlog has help and documentation in English, Italian and Russian languages

Another proof why we should NEVER abandon CW requirement. . It filters
things like this. Once you allow CBers on HF this is what's gonna happen.
Well not exactly the same, but kind of ...)

I beg to differ. This is a reason why people accessing the Internet should have to have passed an exam and screening.

I'd like to see the look on this guys face when the judge explains to him that it IS illeagal to take pictures of minors in the nude.

There is nothing wrong or illegal about the artistic representation of a young body. If you have a problem with this post, please e-mail me and I will not post to your newsgroup again!"

Oh, on the contrary, keep on posting. We want to make sure the authorities contact you so they can lock you up in Folsom. By the way, why don't you post your phone number too?

It does no good to post and answer to spam in a newsgroup. Spammers post their spam to hundres of newsgroups and they never see any reply messages. You need to complain directly to the hosting site.

Judging from the list of addresses embedded in here, it looks to me like
somebody has a beef with PacBell.net and is trying to harrass their
support lines by filling them with porn complaints. I don't think
there's any real porn going on here. It almost looks like the jerk got
shut down for spamming & isn't willing to pay the penalty.

He'll probably wish he had when the police show up at his door.

282. Passive AM loop capacitor

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-24 00:00:00 UTC
From: zpt2718@my-deja.com
Message-ID: <86i6k8qsn1@nnrp1.deja.com>
Source record: 22165

I'm trying to build a simple passive AM loop, so I
can reach stations in the New York area where I
used to live (I'm now in Toronto, Canada).

I have two questions:

1: Will a passive loop bring in 50KW AM stations
in the daytime, or am I wasting my time?
I have a GE "Superadio".

2: Where can I get a variable 360 pF capacitor
for under $10? I got one at a surplus store
in town, but it's got 4 wires coming out of it,
and I don't know which two are the right ones.

I'll try to keep an eye on the newsgroup, but
email answers are best, if possible.

I'm at: zpt3141@hotmail.com (that's not right,
replace 3141 with 2718).

A special callsign OG6K will be used in CQ160m CW. This is the only chance
to work us with that prefix. We work in category M/S.
QSL is ok via OH6AD buro or direct.

Just a quick heads up on a web site that I've created; it's provided
as a service to help others find various info and software for PSK31.
I hope you come and visit, download, and then join the fun on the air.

You can just stay in 1 news group, and read all the cross posts, i like
that idea!!

zpt2718@my-deja.com wrote:
> 1: Will a passive loop bring in 50KW AM stations
> in the daytime, or am I wasting my time?
> I have a GE "Superadio".

Fairly likely, depending on which stations you want. (660 and 880 and maybe 1130 should work. 710 and 770 are going to be a problem because of nearer stations on the same frequencies, and of course 1010 and 1050 will likely be impossible. I don't think 1560 is going to work either.)

> 2: Where can I get a variable 360 pF capacitor
> for under $10? I got one at a surplus store
> in town, but it's got 4 wires coming out of it,
> and I don't know which two are the right ones.

Is this an open-frame capacitor? (with sets of half-circular blades, one fastened to the frame and the other turned by the knob) Those usually had two sections, one for the local oscillator and one for the RF front end. Each section had one or two solder terminals on either side. If there were two solder terminals for one section, they were connected together. (the other terminal is the frame of the capacitor) You want the larger section, the one with the most plates. (this is the front-end section. The local oscillator generally operated above the frequency the radio was tuned to, so it used fewer plates and had less than 360pF.)

How would CW stop this? All we'd get is:

.- -. -.-- -.-- --- ..- -. --. --. .. .-. .-.. ... etc

CW is not an acceptable behavior filter. In fact, if I had a dollar for
every time I had ... . - and ..-. ..- and so on sent to me (at high
speeds even!), I could buy my 20 wpm code test and have a "real" Extra
license before they go extinct. :-)

Since I do have a radio which goes there and listen on 10 meters half
the time, I have to say that I have heard maybe 3 or 4 CB'ers in that
low segment in the past 3 yrs. However, I have heard more bootleggers
on VHF/UHF than on the HF bands. There isnt anybody allowing CB'ers to
use The ham portions of HF legally. They usually dont last too long
when they are there and we must remember that other countries sell
radios as CB that cover these bands and may well be another country
you are hearing. While I do admit that there are CB'ers that go there,
I also find that in that segment there SWR is really high and that
deters them from coming back. Another reason I think that FCC doesnt
do too much about CB radio is the fact that DX kind of helps the cb
get away with alot since I know I dont want to travel 3,000 miles to
catch an operator in the act, plus the other countries that operate
legaly in those bands as CB operators kind of help to camouflage the
signals. That is funny about the roger beeps and weird talk.....

When I asked the question below, I just thought that there was some
news that I didnt hear.

Don,

I'm building the DSW-30 right now, mainly because I am so pleased with my DSW-40. The DSW models
have to be the best single band QRP rigs around. I get many unsolicited reports of the sharp, clear
CW note. With the Tick keyer and CW frequency readout, it's a joy to operate. Plus, it's fun to
build. Concerning your DSW-30, I'd say GO FOR IT!

It's pretty much impossible to work HF mobile with my new Ford Power Stroke. The general opinion seems to be that the most obnoxious comes from the injector solenoids.

Has anybody actually managed to solve the problem on a Fords PSD (no theories please)?

Thanks

Paul

Your not quite correct in your thinking. The Ford Power Stroke engine is not Electronically injected, it is standard direct diesel injection, using hydraulic pressure to operate the injectors.
I suspect that the source of the noise is the PCM Power Control Module, or computer engine controls.

300. The Daily DX newsletter

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-27 00:00:00 UTC
From: Charles T Johnston <charles@ab7sl.com>
Message-ID: <86r0t8$6lg$1@nnrp02.primenet.com>
Source record: 22183

I got the free two week trial of the Daily DX newsletter and it sold me to subscribe for a year's worth of this great service. Not only does one get the Daily DX newsletter like clockwork but also you get immediate notification of important DX news that can't wait till the next day's issue. If nothing else get the 2 week free trial and see how you like it.

http://www.dailydx.com

I look forward to each issue now......

Just how is the FCC giving it away? The last time I checked, The
license structure is still in tact, thus it isn't being given away.
If ham radio was going to turn into CB, It would have done it years
ago when the no-code tech license was invented. As for some on ham
radio that allready treat it like CB, They need to be dealt with so it
isnt inviting for those. Address the current problem, then deal with
what is up and coming.

When I use the various on-line sources of QSL info, the calls that consistently throw up "not known" are German. Is there some reason for this? Maybe the German authorities don't make this information available top Buckmaster and the like?

I like to try and QSL all "important" (i.e. needed for some award or other) direct so if there is a source of information for German stations I'd be grateful for someone pointing me at it.

Cheers,

/Denis MW0CBC/GW8OQV

Hi Denis,

actually all German calls should be in the latest callbook, but I don't know if the addresses go to buckmaster automatically. Normally, most German calls are ok via the bureau. If you need an address, eMail me at DL7DST@t-online.de and I'll try to find one.

Try rec.radio.amateur.digital.misc newsgroup.
Also, do a search on Hamcomm, Intercom RTTY, and Log-Eqf for
some software to try out with the Hamcomm interface.
None of them do CW decoding too well, but then nothing does unless
the sender is a computer or very consistent about spacing, etc.

I'm sorry, but what does this moronic spam have to do with cb and relaxing
requirements for licensing? I know that there are a lot of folks who don't
like the idea of the way restructuring has gone, but give me a break.
That's kind of stretching a bit.

The website indicates the logs will not be kept
online during or after the completion of the
DXpedition. Take a look at:

http://www.getnet.com/~k7wx/qsl.htm

for more information. Hope this helps.

Ameritron AL-80 1KW amplifier. Covers 160 thru 15 meters. Can be modified to cover 10 meters too. Between 600-800 PEP watts output. Uses single 3-500Z tube. The tube is recently replaced, with approximately 20 hours on it. Condition is very good. Has a few minor scratches but no serious blemishes. Includes original instruction manual and double-box packing. Very similar to the Heathkit SB-1000, Drake L-75, amplifiers. Now that the bands are hot, you too can be a "DX Pileup Smasher". Reason for sale: I just upgraded to a fully solid state, fully automatic, half kilowatt amp, so this one is surpluss to my needs.

I'll type slowly.

You asked, "Who is allowing CB'ers on HF?"

I answered, "The FCC."

Please note, the words "giving it away" were never used.

Your comment about no code techs are irrelevent to HF and CB, since they
were not given voice priveleges.

Some would argue amateur radio has already turned into CB, some before
the No Code Tech licenses were issued.

316. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.dx
Date: 2000-01-29 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <86vqei$lm4$1@nnrp1.deja.com>
Source record: 22053

You are welcome to connect to the internet accessible AR-Cluster at
KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH.
Please enter your QTH in the form: Chicago IL or Oslo Norway so that we
will know where all our new friends are from! You will also be
reminded to SET/LOCATION, that's optional but recommended. If you set
your location, then the AR-Cluster will calculate beam headings for you
to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and
Command List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet
connection. Its a huge advantage as then your logging program will
monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions for using software already a
part of Win95/98:

First connect to your ISP as you normally do when using the internet.
Click Start then click Run.
In the box enter "telnet 209.32.226.63" (without the quotes of course).
Now click OK.

You should now be connected to the KC0DJO AR-Cluster.

Enter your call. If what you type does not display, then you will have
to turn on local echo. In the Telnet window click on Terminal /
Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C

HELP

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

Maybe I'll type a little slower. The "giving it away" was stated,
Since the complete thread is not here, you cant see that.

About the No-Code Techs and CB, Your Right and Wrong. Again since the
complete thread was left out, The whole reply was towards HF/VHF/UHF
thus meaning "Ham Radio" like stated, Techs do have voice priviliges
on VHF/UHF the last time I checked.

I dont argue with the fact that others would say Ham Radio has
somewhat of a CB Attitude on certain frequencies, But I will say not
all Ham is that way.

Source record: 22058

3F is a prefix for Panama which has been used a lot this year and late last year to commemorate the reversion of the Panama Canal to Panamanian sovereignty. I did a search for 3F2K on the OH2AQ DX-Summit historical spot search (http://oh2w.kolumbus.com/dxs/qin.html) and it brought up a lot of spots for 3F2K over the last few days with the information:
Op Rick QSL HP2CTM
So, my guess is that it's a perfectly fine contact.

INTERNATIONAL POLICE ASSOCIATION RADIO CLUB
DUTCH CLUBSTATION * P I 4 I P A *
==========

You havent heard our clubstation for long time. As everywhere there
are troubles to find members who have time to open the IPARC-net.
I like to work "PI4IPA" but it didn't work so easy because I have had
a brain-infarct. I try to restart PI4IPA. I must find a good frequency.
My best frequency is 14 MHz. So I think I will restart on this frequency
and try to make a new start. I will start on 14.165 MHz where I have made
contacts before. The time I will be on frequency is 14.00 UTC. I think
I will be active every Tuesday when it is possible. You can collect points
for: 1) The Windmill Award and 2) The Sherlock Holmes Award. I will give
you more information if I now details of it. Hope to meet you on frequency!
For everyone included your family a prosperius 2000!

RESUME: PI4IPA For the crew of PI4IPA

Sorry, pal. The direct injection uses high pressure to be able to
inject into cylinders with high pressure, therefore the hydraulic
pressure boost system. The injectors are actuated by 110v, via the PCM
(powertrain control module for the uninitiated) and the IDM (
injector driver module for the same) The collapse of 110v in the
injector windings creates mucho RFI via the voltage spikes induced
into the windings. There is no more injection pump as in previous
diesel engines, therefore no mechanical way to adjust the timing
either. Timing is determined by the PCM, while actual engine position
is relayed to the PCM by crankshaft position sensor. Also, there is no
mechanical throttle linkage, save for the pedal and pedal pivot. From
here a variable resistor with a 5v reference supply varies a throttle
% to the PCM, which then holds the injectors open longer to allow more
fuel into the combustion chamber. These ar RFI nightmares!

I've been trying to use a program "BeaconSee" with my Kenwood 850, but apparently it doesn't have the correct command sequences to tune the rig under control of the PC.

To make a long story short, does anyone out there have the list of Kenwood control commands that may be sent from the PC to the rig (via the RS232 interface)? I can't seem to find it in any of my Kenwood manuals.

Any/all help is greatly appreciated.

I have the ones for the IC-10 chipset (R-5000, TS-440,etc.) Are they the same? What chipset does the 850 use?
Brian Denley

Greetings Bill...

Welcome to Icom !
How about that! There's a reason they're No. 1 in the amateur radio sales world-wide! Further, 3 years down the road when you need parts for that IC-775.. They'll be available.

Cheers,
Gary

If you get a chance to take a look at some of the service manuals for their HF rigs, I think you'll appreciate their designs and why they perform the way they do..

Greetings Charles..

It's funny you should mention Trio-Kenwood. These are the same folks that put out stereos, CD players and assorted other electronic consumer products..

They have got to have the fastest turnover of amateur radio gear in the market, especially in the VHF/UHF market. After purchasing one of their earlier tri-band radios, to my surprise, my very good friend out on the west coast that was managing a amateur radio store at the time calls me at work. Says get down here to pick up the accessories you want for that radio, Kenwood is obsoleting them! I replied, you're kidding - come on! He said, no I'm not, they are no longer available to us and after we sell out stock, that's it. The radio had only been out less than 4 months in the states.

Although I had once purchased a Kenwood HF rig long ago (TS-820S) I haven't owned one since. It seems that they've had a hard time succumbing to the idea of a finger hole in their HF radios was probably a good idea - probably more interested in 'look' at the time - compounded by the fact that it's a left hand radio. No doubt great for the lefties - but the idea of putting the volume (AF) on the right side of the radio amazes me.. In any event, if you're ever in need of parts for your Kenwood, as Bruce Williams says on his syndicated AM broadcast radio program - "I DO wish you well my friend..."

Cheers,
Gary

Don't know Kemo Sabe - he just rode in - then out -- but I think he owns a Kenwood right-handed radio and the only spinner knob he wants or owns is on a 64 Chevy!! Plus he has a valid E-Mail address.

Hi Ho Kenwood Away
The Masked One

They want a listing of calls in alphabetical order - by the entire
call.
DK0TU, K0GU, K5AM, K8LEE, KB2ZVP, N5JHV, N7ML, VE3KZ, W5UWB, W9WI, etc.,
etc. Don't worry about country prefixes or geographical areas.

The Kenwood TS870 manual used to be available for download at their site.
The control codes for that rig are in the manual. I don't know if they are
the same as your rig however...

348. contest dupe sheets ?

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-01 00:00:00 UTC
From: wbcapps@mindspring.com
Message-ID: <38963cd0.6950397@news.mindspring.com>
Source record: 22082

hello all
I know this isn't dx oriented, but i was hoping there might be
a contester in the group.
i worked the CQ 160 CW contest this past weekend. I used a
paper logbook to log my contacts. I am now getting my results ready to
send into the contest manager.
please help me with "dupe" sheets. the rules stated below,

"Dupe/Check Sheets: All logs over 200 contacts must provide a check
sheet or dupe list. A check sheet or dupe list is a list of all calls
in alpha sorted order."

what is "alpha sorted order?" . is this a listing of the calls
from the various geographical areas, or a listing of the calls
alphabetically? "prefix or suffix?"
I was hoping to get this straight before i send my results
off. any info would be appreciated.

thanks and 73

> manuals.

Kenwood used to supply the command set with the chip set, not the rig itself. I can't help you as my files stopped with the TS-940 and R-5000. The basic command set hasn't changed, but each model added or subtracted data strings to the basic set. Have you asked Kenwood for the datasheet?

Bill:

A dupe sheet is a list of the call signs of the stations you worked in some order other than that in which you worked them. A dupe sheet shows the contest adjudicator that you have tried to detect all your duplicate contacts.

By "alpha sorted order," I suspect that the author of the rules means, as you inferred, alphabetical order. If you logged with a computer, using any of the popular contest logging programs, your software will generate a perfect alphabetical listing of the calls you worked. Look for a file that ends with ".DUP"

If you logged on paper, I suspect that a dupe sheet ordered by prefix, by last suffix letter, or some similar system would be accepted by the contest adjudicator.

73,

Dave VE2ZP

352. HF Resources

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-01 00:00:00 UTC

Howdy, folks.

New site! http://cw.hfradio.org - CW / Morse Code Resrouce center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

Also, if you are into HF, consider getting onto 10 meters! It is hot right now. Lots of DX. The Ten Ten International club is challenging Amateurs to work 2000 contacts on 10 meters, any mode, any 10 meter frequency, in the year 2000. I've posted my current 10 meter logs on the site. See if you are in there (if ya worked me!).

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

In Germany they just put a new set in place.
It comes with some filters already installed
to a bundle price. I don't think they fade out.

359. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8782mu$8fl$1@news.hawaii.edu>
Source record: 22093
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

You would certainly think so, but my experience in the last days of paper logging (when I ordered them by the first letter of the suffix - XU7AAV, then G3NYY, then W9WI, then N4ZZ) was that there were major differences in the number of entries under the various letters. And that was before the current vanity call program got started here in the USA.

On the other hand, there had been a previous vanity call program (which is why I'm no longer WB9NME) and at that time, I had never made a serious entry in a DX contest from home - maybe the letter distribution among North American stations is significantly different from that in other countries?

The real challenge was finding enough ways to denote the rapidly growing number of prefixes. Computer logging probably came along just in time. (or, one might argue that contesters would never have selected the exotic prefixes many use if they knew those calls would have to be duped manually) A lot of people, myself included, had taken to writing out the entire callsign, but that was significantly more writing for people used to writing just a letter or two & maybe an underline or circle.

At least I no longer have to spend the Monday after a DX contest rechecking multipliers and dupes...

Greetings Walt..

I have no idea what your personal hearing is capable of or even what kind of speaker your listening to however, I have never noticed "bad" audio from a desktop ICOM HF radio that is properly aligned and set up. Relative to a radio with the AF on the right-hand side of the radio I believe you'll find that that design is more the exception than the rule. So much for ergonomics unless, of course, you're a lefty.. Further, Walt, they are currently No. 1 in the amateur industry. No doubt, they certainly weren't before - but they are now. The IC-756PRO is going to further break new grounds here in the states once accepted by the FCC. Should be interesting to see what Trio-Kenwood and Yeasu Musen Co. does after seeing the trend set by Icom regarding front LCD based displays on their HF radios. We're even beginning to see this approach taking hold at TenTec as they offer their 'black-box' approach were the visible features are on a PC attached to the radio (ref. Ten-Tec Pegasus - Feb. 2000 QST and PC Radio - shortwave listening amongst others).

Cheers,
Gary

Helmut,

This sort of "bundling" is exactly what manufacturers do when a product is on the downslope of it's life-cycle. There are other reasons for doing it to - but propping up a product as it approaches end of life - flushing out old stock before the new model arrives etc is a very common one. In fact, it's a text-book tactic!

Cheers,

/Denis MW0CBC/GW8OQV

PS I have a 1000MP and think it's a great rig! If the price starts to drop - I may even buy another!

365. Repeat questions on contesting.com

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-02 00:00:00 UTC
From: wbzguy@my-deja.com
Message-ID: <87a2h2ufg1@nnrp1.deja.com>
Source record: 22099
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

The following is often seen on contesting.com. Bill can run it however he wants (it seems by the declining posts over the past 4 years he's censoring it into the ground), and I get his point to limit repetition somewhat, but this is getting to be bit much. Let's face it. This is a guy and his cronies who spend entire ham "careers" repeating the same thing as much as possible in contests.

But he wants contesting.com to be repetition free...

Now his reply will be don't like it, don't use it. Or some poop about bandwidth (what year internet is this guy on ???). But these are contesters who think it's ok to jam repetition down our throats 35 weekends a year for 48 hours.

Guess people don't like in others what they see in themselves.

At least he took the time to summarize for the guy, but geezus enough with the damn chant. Shut it down if you can't handle it being a publicly used site.

Well, I hate to disagree with you, Walt, but the Icom IC746 has a very readable display. And given all of its functionality, if it didn't use multi-function buttons there would be knobs on all 6 sides of the unit. It is a bit much to learn, but once learned I find I like it alot.

Well, I don't know what the RRP is in the US for one of those, but
down under it's damn expensive. Far, far too expensive for most people.

It's more than twice the price of the FT-920, nearly 60% more than
the FT-1000MP, and I think even more than the IC-775DSP. It's a nice
radio I'm sure (I have seen it), but I think I'd rather have the 775
for that sort of money. Or the 920 for a lot less.

> what Trio-Kenwood and Yeasu Musen Co. does after seeing the trend
> set by Icom regarding front LCD based displays on their HF radios.

But the litmus test -- does it really make for a better operating
experience? Like, does it really help to know who else is nearby?
Does it help to be able to change the fonts? Can you play Tetris on it?

Easy there, Walter.

(1) Someone's sexual practices should be their own business, so long as consenting adults are involved. You have no cause to reprint this stuff here. Secondly, if you do in fact find something wrong with it, what the hell were you doing browsing the newsgroup where these were posted?

(2) As for the Declaration (I presume of Independence), whoever made the statement you are quoting below is in fact correct. At the time of the signing of the Declaration of Independence, "all men" would surely have meant white males only. This is unfortunate, but a fact. You must surely be aware that Thomas Jefferson, the author of the Declarartion of Independence, was a slave owner.

Next time, think before you type. And let's stick to DX, it's a more interesting subject.

What you think of idea of realization of radioexpedition on Southern Altai?

Southern Altai - highland is on the board of Kazakhstan, Russia, China and Mongoly.
Land of lakes and waterfalls, mountain taiga and stormy rivers, deserts and snowy peaks...
In time of Soviet Union this territory had been absolutelly inaccessible for foreign tourists (and furthermore for radioexpedition) - in locale
It is not enough of ham stations.

The base camp of expedition is planned to place in region by highest Fastigiums of Siberia and Altai of a mountain Belooha, lake Markakol and Zaisan.

If you were interested by our proposal, we can be found on ranges 21Mhz, 28Mhz call sign UN8JZZ (collective radio station)

A Yaesu FT-470, dual-band handheld was stolen here in Tempe, AZ. I am trying to get it back. I can offer a small reward.

Yaesu FT470, serial #2D520533

If located, please contact me, N7OUQ@ARRL.NET or the Tempe Police at (480) 966-6211.

Thanks
Ed (N7OUQ)

Boy am I glad I eked out a 17 meter QSO with XZ1N. When the west coast and even W8/9 were reporting good signals
on 17, 12, and 10 meters there was no opening. Unfortunately the gap between sunset and sunrise provided no conditions
on 10 and perhaps one opening on 12 (Solar Flux was 200+ that day). Best shot was sunrise plus or minus a few minutes
on 10 and 12 (1230 to 1300 Z). On the 4th stations as close as North Carolina worked them on both 10 and 12 (signals were just S1
on CW). I did hear them on 17 CW at 0100 two days (at 339).

I tried several days to get them to come up at 1200 to 1300 Z on 40 SSB but they always came up well after 1300 (usually 1400)
and sunrise is about 1230Z here. By 1400Z I can hear W5 still but not much DX. 40 was my best band for 8Q7, 9M0, HS et al
in the past. With only 11 left to work on 49 SSB sure would like to work them here.

I lost my big 80 meter antenna (only one left was a NE dipole sloper)and 2200Z is just too early on 160.

Guess with conditions (this is the hardest area of the world to work from SE USA) having XZ on 20, 15, 17 and 10 (from 1959 in W5)
is not all bad. At least we came close to hearing them at times unlike BS7 (no signals at all anywhere twice) and Pratas (first and second trip) and P51 (no chance anyway except for the qso with Romeo). Later in the spring(March or April) puts the activity right in the middle of storm season altho the sunrise and sunset times are more favorable for 10 and 12 and maybe 80.

Maybe we can get a relay station on the left coast!

Maybe for 160, 80, yes, right. However for 40, that should not have been
the case for you.

This operation had a WONDERFUL collection of operators who really
understood LP lowband, and especially greyline mode! As well, they had
gain antennas which they set up to take advantage of that LP reverse
signal path to the Southeast and South Central USA crew!

If you listened CLOSELY to the whole operation, at least in the early
days, they focused intensly on putting at least two transmitters and
operators on low band work from about twenty minutes before their
SUNRISE to about twenty minutes after it with the beams reversed to LP
to the USA.

This was a spectacular example of near-sunrise enhancement of low band
signals if you listed carefully. For example, their sunrise on the
second and third day of the operation was at just about 0003 GMT. You
could watch the signal on LONG PATH pump up from a realistic S3 or
so on my 4 element phased vertical arrays headed south, to a for-real
near S9 meter peak on my FT1000D. The peak was about the exact seven
minute pre-sunrise time, their site. It then held for about five
minutes post sunrise and rapidly decayed into the noise here.

This was the clearest repetitive example on a several-days run like this
that I've seen from an 'expedition' station since the trip the Russian
crew made with U0Y to Kyzl in the Tuva Oblast in Zone 23 back in 1974.
With 4 element phase arrays there, they gave us a very rare shot at Zone 23
on 40 and 80 here in the USA.

Those contacts were where I first gained some real insight on how important the sunrise side of the line can be to getting these in the log!

My own two contacts with XZ0A on 40 and 80, each, came on successive days at exactly 7 minutes ahead of their sunrise and at exactly the peak for the onrushing avalance enhancement of the layer where it gives that mirror effect of angular support to the propagation that we think we now understand about serious greyline and low band work.

I will admit that the W5 crew here was in better alignment for a real true peak at this. Early in their expedition, we were only about 15 minutes off a true simultaneous greyline terminator-to-terminator location path. That would have, in my personal experience, gotten us about an additional 10 DB worth of signal for the task. Had they not been running gain antennas for the job, it might have been necessary. As was, they gave hundreds of W5 and W4 USA stations one of the most unique and special contacts that many will have in a lifetime of ham radio on the low bands. You should have been able to have stood a good change of working them on either 7006/7 or 7023, or 7047 or 7049 on SSB at least one or two days and made it in this way. Their signals on the LP were easily 30 DB better in enhanced mode than any day I was able to listen for them short path in our morning and their sunset.

It was Dave, W5UN, who gave me my first notice in his spot that they were aware of and concentrating on the effect. He is a VERY smart operator and VERY much a contributor, has been, ever since I first personally met him as a novice down in Houston in 1954 as WN5WZQ!

Yes, based on personal experience, I'm not sure that you would have made it on 80 that way. They were a lot weaker on 80 that way, but that path did also work here for me as well this time.

To my feeble understanding of all this, you only get the rush of that glorious little peak on the SUNRISE side of the terminator! That's why it is critical to have a low band operation which understands it and uses the technique to make the play LP for us here in the rough parts of the USA for these contacts. The enhancement effect goes off much better, in my opinion, if the DX station is using the technique for working us here in the USA, rather than the reverse.

The technique isn't just pure greyline either, it goes for sunrise at the site even for non-greyline paths as well. You'll here this little peak all the time on stations in the Mid-East, the East coast of Africa, and even VU and UA9 station on 40 and 80 that will get on just at their sunrise and try for us here.

To my knowledge, only HZ0ZAA and Ross, 9M2AX, over in this part of the world, have ever really exhibited the understanding and patience to operate in this mode fairly regularly for us here. I treasure both of their cards for this work in my collection of stuff here as a result of their kindness. At the right times of the year for true co-incidence greyline, you can produce a week or two straight of contacts like this, given half

a chance of ion cooperation. That even with no more than 100 watts and a vertical at one end or the other, and gain antennas at the other.

Yes, the run of flux up at 190 and A and K index values of 2, 3 and 0 was a dream of a lifetime for the low band crew here in the USA.

I'm VERY greatful for the skill and the cooperation this crew gave us.

Maybe this post will help explain it all to others and give others both the motivation to do this when they travel or are the DX in this part of the world, and to be able to take advantage of it if you are on the non-traveller or DX station!

399. FOC contest?

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-06 00:00:00 UTC
From: Larry Gauthier <larryg@ismi.net>
Message-ID: <389e38a0@news.ismi.net>
Source record: 22133

Advice needed:

While working 10 meter CW this weekend (the band was in great shape!) I encountered a number of folks calling "CQ FOC". Refering to the latest CQ and QST contest sections, I could find no reference to a contest or group called "FOC". I then tried working them, but was told that the event was closed to all but "FOC members" and was refused a QSO.

So, can someone please enlighten me? What is this FOC group? I am an avid CW guy, and my favorite band is 10 meters. Seems to me that if someone is having a 10M CW event it might be a group I'd enjoy... except they were kinda' rude to me.

Bob:

You can operate right away under CEPT. See
http://www.arrl.org/field/regulations/io/.
This ARRL site has all the info. But, if you are going to be there
pemanently, then you'll need a Belgium license.

Hallo.
Ik ben in bezit van het code 3 prog.(ongeveer 6jr oud).
Deze heb ik altijd gebruikt op een 286 computer en werkte goed maar helaas
die heeft de geest gegeven dus dan maar een 486dxII met win95.
maar.......alles lijkt goed te werken maar geen enkel telex station goed in
text omgezet.(werkt wel in dos mode).
Ik werk verder met een kenwood 5000.
Vraag 1: waarom werkt het nu niet
Vraag 2: kan ik ook andere software gebruiken (op een lf3 interface)(windows
software)
groeten
Jan.

I like to sell my ITT linear amplifier with 8930 Eimac tube.
The price is 900 us $ and included in price i send 1 new tube more.
The amplifier working at following features:
5w input - 500w output
It is made in coaxial cavity and the working range is 138-149Mhz with
same features.
Please contact me for more info and for shipping.

Does anyone have any experience with this antenna? I wonder if the problems experienced by R-7000 owners with water getting into the traps also occur with the R-6000. I've heard that the SWR skyrockets on certain bands on some R-7000s when it rains. Any insights would be appreciated. Thanks.

431. OX DXpedition

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-11 00:00:00 UTC
From: fj@cfjensen.dk
Message-ID: <38a4138b.18245404@news.inet.tele.dk>
Source record: 22015

Dr. OMs

OX2K DXpedition

We are a group of Danish hams who for several years have had a dream
of activating OX, Greenland on 2m, 70cm and 23cm EME
Well, now the dream is a reality!
Besides the EME operation, 6m and all HF-bands will also be operated
around the clock on CW and SSB.
We are 25 hams putting up this large scale operation as OX2K in the
period from 29th of May till 6th of June 2000.
The prefix OX2 has not been in use for many years, and Greenland is
exceptional on VHF-SHF and still rare on 6m and HF.
Of course this operation is expensive, so we kindly ask the DX and EME
community to support the DXpedition.
Please visit our homepage at http://www.qsl.net/ox2k and get all the
information about EME-skeds, QSL-info, equipment, planning details and
so on.
We will be very glad to give you "a new one" on HF or VHF-SHF.
If you have any questions or suggestions, please send us a E-mail.
mailto:ox2k@qsl.net
Tell your friends about this DX-pedition.

CU on the bands.

Best 73 the Greenland Team OX2K

I've used the R6000 for a little less than 1 year. I have no problems with trap arcing etc even when running 1KW (AMP Supply 450 ZC).

However the bandwidth on 20 changes when it rains. It is still resonant at 14.20 but the VSWR at either end goes up to about 2.2 to 1 from 1.5 to 1.

The other bands do NOT exhibit this special "feature".

Deacon Dave, W1MCE

Hi Merius, I try to keep track of FreeBee manuals on the web but haven't seen
a site that has Yaseu downloads.

Some of the manual vendors on the web have what you want.

The ARRL announced a year ago that they would
begin to accept E4 cards as of October 1, 1999.
Cards submitted earlier would be returned with
no credit.

The DXCC desk was not accepting any cards from E4 until 10/1/99. This
was announced early last year when E4 operations started. So, cards
submitted before then were returned with no action. Since then, cards
should be accepted. See the DXCC press release from February 1999 at
http://www.arrl.org/awards/dxcc/news/990204.html for more information.

It is a real shame when something gets lost that is almost impossible to replace. Had it been a simple letter for example you could have sent a duplicate. I am sorry that evidently the US Postal Service has failed to respond to the Belgian inquiries (twice) and now your cards are presumed lost. Millions and millions of letters and parcels are handled each day in the USA and more then 95% of them arrive at their destinations. Regrettably yours has not arrived. Your case may be another good example why electronic qsl cards should be accepted by DXCC desk. If that was so you could have easily resent your 24 cards. 73 / DX

Dear Egbert:

You have my .. and I am sure, a *LOT* of other hams' sympathy over such
a loss. However, just to put things in perspective as to the regularity
with which these things might happen here in the USA, I'll comment.

I've read the page. Yes, things do happen, and in any postal system.
For a period of about twenty years I made requlars mailings to about an
18,000 souls in several-times yearly mailout as direct mail and mostly
first-class mail as well, here in the USA.

For telemarketing purposes, and these were *NOT* blind new business
efforts, but reasonable approaches to our current client mix, I really
had a chance to get a feel what got lost and so on.

The real loss rate is way down there, to my observation, such that in
just plain first class mail in the USA we would have not more than a
half dozen even questionable items in a 60,000 to 80,000 piece year. Of
course folks move. Of course, mail gets grunged. But the actual bungle
count was about this per year.

I've also noticed, that as time has passed, it seems to be getting a bit
worse here in the USA. In roughly 30 years, at the postal use rates now
less than that above, I actually have first hand evidence of only *TWO*
bungled Certified/Registered mail deals. One occurred in 1972, in which
the item was delivered as a registered letter with the mail-back card still
left on it and unsigned! The other happened in 1998 over a US Postal Money
Order that was lost and the receipt never ever showed up either!

After the first incident with the deal in 1974, our attorney counseled
us that we should make a copy of the correspondence in Registered and
Certified mailings, just in case. We do.

I wouldn't bet a cookie on it, but, given the circumstances, and proof of loss in mailing that can be traced to a USA fault, you just might be able to ask for advice on what to do from the ARRL based on the actual evidence you would have. Yes, the award is rigorously bound to proof and original paper. Probably I'll create a stir by even suggesting that you might try this if you have proof of the original paper .. However, accidents do happen. Mail does get lost. It does get destroyed. It does get mis-sent.. Were I in your shoes, I would sure try that approach before giving up, but if I did get variance, I sure wouldn't talk much about it! Grin!

There is a scale to things, emotionally.

Just think about what might have been aboard the Egyptian flight out of New York as well as the souls that were lost. Of course mail doesn't move as it used to as part and parcel of passenger flights like it used to, but things happen.

So said.

You know, I've always thought that loss is always loss. It really isn't fair to atempt to try to scale it, perhaps, in the way we commonly seem to do these things as humans. Sure some losses are bigger than others, however, a phrase I've adopted over the years seems proper.

The sum of all man's misery is a constant.

Said a little different ..

All man's missery has the same sum.

Condolences, but please don't think all the US Postal Service is a bad ride. I don't work for it, but I do know the average postal worker here tries very very hard to prevent anything like this from happening.

--> Sleep well; OS2's still awake! ;)

Congratulations, Norman! Me too! I did it by taking the tests on
qrz.com, exclusively......

Got a new call here, today. Wanted a REAL ham call for over 30 years.
My new call is W4CSC (Charleston South Carolina). I couldn't believe
it was open!

I've got a much better idea on what to do with that book! It's a
little late now, but you can still do it. Did you or do you know any
KIDS that passed their Tech test or General test at the testing
session? Are there any Tech KIDS in your ham club?

GIVE ONE OF THEM THE BOOK!!

Larry W4CSC

Why cant you re-QSL the stations with a IRC and a explanation letter and try
to re-collect the cards. I know you should not have to but whats DXCC worth
to you? I think I would try that, and not declare a total loss.

DXCC cards (for most countries) can also be checked locally. Whether
there are any "registered checkers" (or whatever they call them...) in
Belgium I don't know, but would certainly think so.

I lost some JA cards (mailed to JARL for the AJD award) some 15 years
ago. That said, it's not exactly difficult to replace the cards for the
AJD.

Millennium Radio Poject - results.

We have asked you to participate in the Millennium Radio Project.Our goal was to record how radio stations celebrated the start of 2000, year Y2K.

Now these recordings (sample Real Audio files) are avalaible on our webpage.
We have followed as new year started in every time zones of the planet from Fiji to India to Ukraine to the UK to San Franciasco. We have heard national anthems, the Auld Lang Syne and live programs from the Tour Eiffel and the Big Ben. We could listen to the sounds of fireworkd all around the globe. We heard Happy New Year from ABBA in several countries, several stations.

Big thanks for the contributrors (stations and individuals) who helped this project to became true. Now all you have to do is to enjoy these real audio sample recordings.

I already placed my order.Should have it operational by the weekend.I
spoke with several Ops who were using the rig(on 80 Mtrs) and they all
were happy with it.Bottom line is...I can evaluate it for up to 30
days.If I decide to return it,the Ten-Tec factory is only about an
hour away..:>)

Hi!

YO2ODE was YO5ODE, search for that callsign.
He moved into YO2 land few weeks ago. I do not know his actual mail
address, he call me sometimes on phone line or in 80 m.
Regards
73 de yo5te!

472. EP2MKO QSL card

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-16 00:00:00 UTC
From: Scott Hummel <hummel@toolcity.net>
Message-ID: <38AAB3F3.9B3ED0A8@toolcity.net>
Source record: 21956

Has anyone received a qsl from EP2MKO lately? His manager is RU6FZ.

I've heard he's a slim and I've heard he's good but qsl's take a long time.

Anyone have any experience with him???

Thanks...

Scott

Is there a URL or FTP where one can read the Ham-DX Digests????

Thanks

475. Survey of DX'ers Radios

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-16 00:00:00 UTC
From: "David (K5kH)" <holtkampxx@mindxxspring.com>
Message-ID: <38AAE54F.C8E1AA14@mindxxspring.com>
Source record: 21959

I seem to remember seeing a tabluated survey of what radios were used by prominent DX'ers worldwide. It was in an appendix in a book, but I'll be darned
if I can find that book again. It was done about 10 years ago or so, and is probably somewhat dated, but I'm hoping that followup surveys have been done and more
current information is available.

Any help with suggestions where this survey might be found will be greatly appreciated!

Best wishes and 73s!

David (K5KH)

Howdy,

Sounds like a winner!:-) Only reason I'm waiting, other than cash, is my plate is full. :)

Do have hopes though. Maybe work and HF at the same time is in my future. :-)

The QST review is impressive.

Jim

I know the pain. For my very first award as a Novice operator,
Worked All States, I sent the 50 QSLs to ARRL HQ with my application.

I got the award certificate, but the cards never returned.
ARRL said they mailed them. I've no reason to think they didn't.

Those were 50 of my very first QSL cards. It pretty much ruined
my appetite for award chasing. I only get DXCC cards checked in
person.

Memories, ugh.

He is not a slim, but you must send your qsl via registered certified mail, otherwise his mail gets pilfered. I got my card that way, after 6 attempts via regular mail. 73, K7JY.

Someone at the league probaly threw them away on purpose. They do the same thing with contest entries. If you are on their list, they roundfile your entry. This is commonplace with the pampered scumbags at Newington.

482. Re: What's it going to take to get 5A1A card?!?!?!!?!?!

Herb,

Today I received my direct card from Abubaker. In earlier QSO's he
has said many times that he does not receive direct cards that are not
sent registered mail. It is just as frustrating for him as for us, I'm
sure.

I sent mine 10/19/99 with a green stamp, sent it registered mail and
requested a return receipt (cost an extra $ or 2). I received the return
receipt that confirmed that Abubaker received it in early december. I
was beginning to despair, but today I got his card. And on the envelope
is the largest most beautiful stamp I've ever seen! It is about 2 x 3.5
inches with a lovely colored background and a golden Gaddafi riding a
horse!!! <no kidding>

Don't give up hope! Abubaker is a good man and will QSL when he
receives the necessary envelope, green stamp, etc.

Best wishes and 73s!

David (K5KH)

Among many other possibilities, try http://oh2aq.kolumbus.com/dxs.

I sent a card with a greenstamp direct back in 1998. Total cost was
something like $6.50. I finally received a card back via the buro. As
for the comment:

> Today I received my direct card from Abubaker. In earlier QSO's he
> has said many times that he does not receive direct cards that are not
> sent registered mail. It is just as frustrating for him as for us, I'm
> sure.

This can be solved if there is a desire to. Appoint a QSL manager (I am
sure there would be many volunteers) or perhaps a DX club in Europe
could setup a mail drop. In fact, last year there was a 5A special
event station with a manager in Italy. The manager had to put out a DX
bulletin to the effect that he/she was only handling contacts for the
special callsign and not 5A1A. So obviously there is demand for it.

For a while, there was a group in Spain, IIRC, that would collect cards
for 5A1A and a member would bring them in by pouch on trips to Libya.

I just bought my first HF rig which I will be using in my car and home. For the car I am thinking about the above auto-tuner but some tell me I'm better of with a small mobile tuner which i adjust myself. Anyone have any experience with AT-50 to say wether or not a good enought unit to justify $350 or so.

RG-213 @100ft,has a dB loss of appx .18 @1 MHz.....appx 1.3 @ 30MHz.
Multiply values by 2.5 for 250ft of coax.With a reasonable antenna
gain,this isnt a problem.With a less efficient antenna,I would try to
get the antenna closer to the shack.

Dean,

Writelog! Even includes Rittyrite that uses your soundcard to generate AFSK and PSK. I still own a copy of NA, but don't use it too often (except 160 meter contests where my computer generates so much hash on the band I have to resort to an old 386 laptop) these days.

You KNOW it's just funny that today you should have to go looking for RTTY & fax frequency lists. Not too many years ago(about 20) you couldn't avoid stumbling over press service and WX fax BC's. They were all over the HF spectrum like demented vermin going on, and on, and on, and on, for hours and hours at a time with traffic lists, and frequency call up lists, and list of lists, ad nauseum .

Boy how things have changed lately, especially since the Internet got going.

I tried several routes which included the Spanish mail drop. They had
received my card and emailed that it had been forwarded on, but never
received anything as a result of any of those attempts. Finally got a
card from a US manager via an Austrian affiliated with some of the well
known nets. I was happy to get the card any way I could. My registered
letters--two of them--never resulted in anything, and never had a return
receipt. That card was expensive!!

This method is not too reliable. You need a method of locating all
sites pointing to yours, right? So - do a search using altavista,
for sites with links to yours.

The syntax for the link search is all on the Altavista advanced help.

Basically you search for link:blah.com.au/jabba
or whatever your site is.

This way you will find all sites linking to yours (within the currency
errors of Altavista) and you can compile an email list while you're at
it. Then when you next move your site, you can just email those
webmasters and request the change direct.

You will find other very useful facilities on the advanced help of
most search engines. The other one I use often is to limit the domain
range to sites in .au or .com. This does mean you won't find
Australian sites hosted at a non AU domain.

515. Advice wanted: Butterfly or similar antennas

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-21 00:00:00 UTC
From: Mark Jeghers <mark@t4p.com>
Message-ID: <38B24195.87B050AB@t4p.com>
Source record: 21999

I am trying to identify some directional antenna smaller than a
traditional Yagi,
but still having the best possible performance, trouble free, etc.

I've looked at the Butternut Butterfly, and heard both good and bad
reports
on it, so I don't know what to think about it. I'd like to know REALLY
how
this antenna is, as well as any alternatives I should consider.

Please let me know your thoughts on the Butterfly or any other antennas
of
similar size that might also do well.

516. 10 mx IOTA freq?

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-22 00:00:00 UTC
From: "Kenneth D. Grimm" <grimm@NOSPAMlynchburg.net>
Message-ID: <09uxOERy3S7u5n0eTMYejDgsg6io@4ax.com>
Source record: 21900

I'm planning to be active on 10 mx from IOTA NA112 from Bogue Bank on
March 3-8. Is there any particular 10 mx frequency that IOTA chasers
prefer? SSB, AM & FM using my new little HTX-10 to a ground plane and
lots of salt water. (I don't expect a pile-up, but am prepared to
handle one if it develops.) 8*)

School Round Up went well. The students at Brionnon (Washington) School (5th and 6th graders) really enjoyed their first on-air experiences. We made some very excellent contacts. See some pictures at http://hfradio.org

A reminder:

http://cw.hfradio.org - CW / Morse Code Resource center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

520. VP6BR activity

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-22 00:00:00 UTC
From: George <sp2brz@worldmailer.com>
Message-ID: <38B287D4.98BAC194@worldmailer.com>
Source record: 21904

If here is any OH being in contact with VP6BR please give that question to Pictairn: "why his activity always starts last afternoon on 15 to 10 meter when no any propagation for northern Europe???". In that way he works only many EA's, I's which give still good reports when no any signal on those bands here in northern Poland. Good example: now (12 UTC) VP6BR is QRV on 40, not for Europe ofcourse, but for USA. When he is tired, will go sleep, to be QRV again at 20 UTC for south/west Europe only... Has he forgotten where Scandinavia is placed?

What Band are you talking about, Mark? Or are you "dreaming" of the magic All-Bander that fits in our pocket? The ONLY successful "tiny" antenna I've ever known of was owned by a guy South of "the Bay" who ran a very successful four foot diameter loop ....on 3527 Kc. His bandwidth was plus or minus 5 (five) Kc!!!!

More info please, Mark..... "DM"

Hello Ken,

28.460 is the standard frequency for IOTA on 10 meters. You can also work a
lot of EU at 28.560. I'll listen for your call and hope to work you there.

Worked py0ff in the contest. The on-line QSL resources report several routes, depending on the date of the contact.

Does anyone know the route which applies for 2000?

Hi Mark,

I ran an HQ-1 MiniQuad for a couple of years back in 1982 (earned DXCC on it barefoot). Butternut took them over and made some changes to the antenna. If the truth be known it was much like a rotatable dipole, was very narrow banded and had no back or side rejection. Also, whenever it rained, snowed or iced (?!) the SWR would change dramatically.

If I were you I'd really consider one of the smaller tribanders like the Mosley TA-33 JR, even used it can be a much more effective directional antenna with better rejection. I have been using one for several years on IOTA mini-DXpeditions and even at 17 feet it does a nice job.

Good Luck,
Tony, WF1N

CU on the bands...........

73 - leo - W3LEO

MM, SCOTLAND
Leo, W3LEO, will again be active from Portpatrick in southwest Scotland from about 29 February - March 17, 2000. However, Leo states that this is a vacation not a DXpedition and "time on the air will depend on the antennas, on propagation, and on when the nearby pubs are open, HI..." He will use the callsign MM/W3LEO and plans to be in the ARRL International DX SSB Contest. Outside of the contest, he will concentrate on 10, 12, & 17 SSB. He will use an Icom 706 (100 watts]), an R-5 vertical [10, 12, 15, 17, 20 meters], and wire antennas on a DK9SQ mast for 40 & perhaps 80. QSL via his CBA (with SASE) or via bureau.

NOTE: the CEPT callsign for someone visiting Scotland is your callsign preceded by "MM/" [not "GM/"] -- and there is NO number after the prefix. Last fall, Leo had some hams tell him he had to have a number after the prefix; not true... This was confirmed by a telephone call to the U.K. Radicommunications Agency.

NOTE#2: "...when the nearby pubs are open..." There is a pub just 22 steps from the front door of my cottage!!!!! Now, if I can just get them to deliver a few pints every so often during the contest :-)))))))

527. ** BC895XLT software! Download demo now!

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

EXACTLY. There are several organizations that sponsor major dxpeditions
on a regular basis. Most of the major manufacturers donate the use of
their equipment (yeasu, force 12, alpha, etc) and many dx'ers regularly
support dxpeditions with small donations such as a few $$$ in the
envelopes with their qsl cards to help defray the costs of postage and
printing. With 2 exceptions, I have never heard of any dxpeditioners
making money off this aspect of the hobby.

The other side of the coin is the Brian, N0MND's..aka the cheapskates who
feel that because THEY worked the DX, that THEY are entitled to all their
cards free.

To each his own. I am sure that Brian, based on his comments leans more
towards the radio cops that seem to pop up when a dxpedition is on the
air. He fits the pattern so perfectly

please qsl beya da burro qsl 100% qslie??

Interesting how every idea Brainiac has concerning the illegality of
amateur radio and money has never been supported by the FCC.

The use of clubs to finance and maintain repeaters...perfectly acceptable
practice according to the FCC

The use of green stamps and donations for dexpeditions, perfectly
acceptable (although with the request for specific amounts, a tad off
base) practice according to the FCC and the rest of the world's amateur
radio societies.

Poor toadie....a few sandwiches short of a picnic

He works for a company that is global in size. They send him to all
these countries to help oversee the installation of communications
systems. What's the big deal? The ARRL overseen the DXCC program.

You have too much time on your slippery little hands get over it Brain.
You are way out of it

you are dismissed

BTW, maybe the cross posting to the DX NG and the various DX reflectors
will help you out. I promise, I haven't edited your comments (much!!!)

Hopefully everyone with an opinion will contact you direct as requested.

Have fun with the DX community. Let's see what you can do with them.
Better yet, what they can do with you

> Has anyone received a qsl from EP2MKO lately? His manager is RU6FZ.

I received one about a month ago. It was in response to a card sent nearly
2 years ago. I sent twice, the second time as registered mail. Don't know
which request received the reply.
>
> I've heard he's a slim and I've heard he's good but qsl's take a long
> time.

Don't know if he's a slim. I asked Abdollah, EP2FM, about him but he
didn't respond. Abdollah and I have made a QSO and exchanged cards. The
EP2FM card was accepted by the DXCC desk.

I understand that the EP2MKO card is also accepted for DXCC. So, keep
trying, keep hoping!

My conversations with EP2FM indicated that amateur radio is slowly "coming
back" in Iran. I sense that there may be lots of stations on one of these
days. One of the bigger problems is getting adequate equipment.

The first time I worked Abu Baker he advised me to be sure to send my
card to him registered post. When I asked my local (UK) post office
branch to do this they said Libya did not accept registered letters,
(from the England anyway). They suggested I try recorded delivery.

The second time I worked him (I think he likes my M0 call sign!) he
confirmed he had received my card and his was on it's way to me. Some
time later his card was sent on to me by another UK amateur, it had been
included in his envelope, whether on purpose or by mistake I don't know,
but at least I got it.

There's nothing wrong with that. There is something wrong with an individual putting up a closed repeater business and charging other hams to use it. The trustee/control op is retransmitting your signal for money.

> The use of green stamps and donations for dexpeditions, perfectly

>
> He works for a company that is global in size. They send him to all
> these countries to help oversee the installation of communications
> systems. What's the big deal? The ARRL overseen the DXCC program.

The ARRL only administers the DXCC program. I was only wondering how it was that a single individual can make so much impact in getting other countries active (not just getting himself
active), meanwhile the largest amateur organization doesn't seem to do a lot in the same regard. No, I don't mean activate a rock during the CQWW or the ARRL DX Contest weekends. I mean actively work with underdeveloped countries to have an amateur radio program.

For example, Dave once told me that in downtown Dar es Salam, an amateur license was like the
equivalent of a years salary. Do we (I'm an ARRL member so I can say we) have a small pool of
money to help get these folks going? Do we have enough diplomatic ties to try to get the license fee reduced?

That is why I tried to purchase a small radio to send to Dave for his friends use. I got screwed, and you guys seem to take some joy in that. Well, as in Somalia, the relief organizations can send food and clothing and blankets. But when the bandits/technicals steal
the food, clothes, and blankets, do the Americans suffer? So go ahead an laugh. You're laughing at the misfortune of some ham that I don't even know in an underdeveloped country, not
at me.

> You have too much time on your slippery little hands get over it Brain.
> You are way out of it
>
> you are dismissed

Whatever.

> BTW, maybe the cross posting to the DX NG and the various DX reflectors
> will help you out. I promise, I haven't edited your comments (much!!!)

As long as you don't chop out everything except a single word as Jeff has done, then take that
single word out of context. You wouldn't stoop that low now would you Steve?

> Hopefully everyone with an opinion will contact you direct as requested.

Really? I'd rather keep it public. A little sunshine will disinfect your snotty remarks.

> Have fun with the DX community. Let's see what you can do with them.
> Better yet, what they can do with you

Sure. I am part of the DX community. I won't have any problems. And you thought you were so clever.

why not cry the FCC a river Brian. They seem not to care. Take your
moral high horse and do a Steel Pier into a dry tank

The use of donations to offset the cost of dxpeditions outside the US and
to offset the cost of printing and mailing QSL cards is a long
and accepted practice by every government. You trolling here for
supporters won;t even get you enough to hold you pants up

Interesting how no one in the DX community (all have been invited to
attend you public humiliation) have offered support 1 for you. Must be
the company and opinions you keep.

nice try though you lose again

It sounds like a conflict of interest to me, but then I tend to read the rules as more restrictive so as to NOT go afoul of them. The ARRL says you can order pizza's on an autopatch. I wouldn't dream of it.

Keep in mind that they do not have 24 hour power on Pitcairn. At least they
didn't a few years ago when I was friendly with Tom and Merelda. They only
run the generators during certain hours and used to squeeze in their
operating during those hours. Also they use commercial radio to communicate
with the outside world for government and health putposes. I'm fairly sure
that ham activity cannot conflict the the commercial operattions. (i.e. Not
at the same time.) It is a different world, they have different priorities.

All this time I thought you were playing stupid. I can see that you
aren't playing. Martti is only subject to Part 97 when in the U.S.

Dave never told you that. Dave told you that it was the equivalent of
about $30. Now it has been raised to $50 (not the equivalent but $50
U.S. per year).

> Do we (I'm an ARRL member so I can say we) have a small pool of

The IARU has a program which provides some basic CW kits, some Handbooks
and license manuals. It does not provide material such as mikes, keys,
power supplies, coaxial cable, connectors, etc. I do not believe it has

the budget to do so. Many of the DX clubs and foundations do provide
such things.

> That is why I tried to purchase a small radio to send to Dave for his friends use. I got

Don't bother to send any broken radio equipment to Tanzania. Broken
stuff abounds. The means to make repairs does not exist. There are no
Radio Shack stores and no parts suppliers to speak of. If you'd really
like to help (as you mentioned a year or so back) please send working
equipment.

That is interesting. I don't find you in my logs from any operation
over the past fifteen years on any band or any mode. Maybe you enjoyed
a rag chew with a guy in Italy once.

Really? How so. How does Part 97 affect a foreign national? Whne he
uses his Finlandian callsign? When he uses his p5 callsign Part 97
comes into play when he uses his American callsign, when he's in
American, not when he's in Yemen

still no clue eh Brian?

why should we? The FCC states that amateur radio is used to develop
international goodwill. Maybe you are suggesting that the US Governbment
subsidize foreign national amateur radio licenses. Nice troll...too bad,
you fail

>
> That is why I tried to purchase a small radio to send to Dave for his friends use. I got

Gee Brian, all Han's post does is confirm that you are indeed clueless
when it comes to the DX community. He just answered why Martti can do
what he does and you come back with a patented smart ass Cecilian type
```

answer.

And look at that...money being given to make radio transmissions. I would suggest you get on the next slow boat to china to begin your protests over this obvious breaking of Part 97 rules.

Seems you lose 3 to 1..4 to 1 when you include the FCC who considers this a non issue.

silly wabbit, wits are for kids

go to petty nuisances and get a few clues

you are dismissed for failure to know anything

NOT TRUE! He is ONLY subject to Part 97 when
he is in the US operating under that call sign. If
the ham is in his/her home country operating with
the home country's call, that ham is in no way under
Part 97 constraints and/or rules.

Cheers,
Bill K2UNK

OK, on the "pecuniary interest" policy in ham radio. I've heard it expressed that when a truck driver asks for directions over ham radio, and gets those directions that are leading him straight to a delivery address, (I've even heard them say, "I've got a drop at XXX Street in XXX City"), that the driver is breaking the rules. What's the opinions of those on the NG?

My opinion is that it's pushing it to say that a driver is breaking the rules...but a rule is a rule and he/she *is* looking for those directions to complete a job that he is gaining financial benefit from....

561. New version 2.5, Active Beacon Wizard ++

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-24 00:00:00 UTC
From: Jim <jim@taborsoft.com>
Message-ID: <sbasi3qer2a44@corp.supernews.com>
Source record: 21941

Active Beacon Wizard ++ version 2.5

ABW ++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock, via the net, are also provided.

ABW ++ will also download and display up to fourteen selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW ++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary, along with report explanations, is provided in windows-help-file format and may be of useful when interpreting the propagation reports and forecasts.

In addition, ABW ++ provides a beacon-cw simulation function. This function uses the system sound card to create the international morse code sounds of the NCDXF beacons. This is mainly intended for demo and training purposes.

Screen captures and basic information along with the publicly download able version, are available at:
http://216.92.156.38/abw/

This is located on our new host; hopefully the speed will be improved.

I never characterized him as anything wonder boy. You have this
obsession with Martti and his money. Guess the old adage proves true?
People who worry about how much money other people have, never seem to
have any of their own?

What difference does it make? I have forwarded all your posts to Martti.
I am sure he's having a few great laughs at your expense.

Just what the DX community needs..more radio police named Brian =:-o

Just get over duddly, you can't win. You made your point and you can out
looking like oblio and the pointless forest.

If you had Brian N0MND and 100 points YOU LOST!!!!!

He shots...shwish nothing but air

He's in the club house stretch and oh my gosh he's put the brakes
on....

He shots and he scores in his own net what a loser

NICE TRY Pinky

First lose the "ethics" part. You're trying to switch law with ethics.
Cheap Cecilain move on your part, typical, but cheap none the less

He/she is restricted by the laws and regulations of the country he/she is operating in. Just as a foreign national using a reciprocal license here in the US is restricted by the US operating privileges his class license has been given

Go to RAC or DARA or JARL's web site and you'll see. You are bound by their laws, not ours as long as you are in their territorial areas

WHAT??? Your post refutes Dave's, and later Steve's posts. You guys need to huddle -before- you start posting, not afterwards.

Here's exactly what you said:

In a previous article, Hans/K0HB writes:

Martti is "almost destitute"? You gotta be kidding!
He is Vice President of Nokia, the worlds leading
supplier of Cell Phones!

And in response to your previous query about a US
license, Martti holds licenses in several countries
in addition to his native Finland. China, US, and
Portugal for starters.

News Flash!!!!!!!!!

The Beijing-Chaoyang-Nokia Amateur Radio Club, BY1DX,
is on the air. With support from Finnish cellular-telephone
maker Nokia, the club, located in Beijing's business district
in a tall building that overlooks the city, is the first-ever
foreign corporate-sponsored Amateur Radio club in China.
OH2BH is QSL manager.

Ain't it just awful!!!!!!!!!!!!

Do you REALLY think Martti gives a rats ass about a measly
dollar or two sent to help with expenses for his QSL card?
Get a grip!

73, Hans, K0HB

Germain,

La traduction de "barefoot" en fran&#65533;ais est "pied-nu". Et comme le dit
Bob, c'est une expression qui signifie que l'on utilise le transceiver avec
sa puissance nominale d'origine contrairement &#65533; l'utilisation du transceiver
avec un ampli lin&#65533;aire...

Translation of barefoot in french is "pied-nu" : bare = nu ; foot =
pied. Like Bob said this stands for using the transceiver with the standard
power output of the transceiver vs using an external linear amplifier.

Hope this helps,

73,
Philippe

In Stebe Adellian logic, a thread can never develop with new information. It must stagnate,
fester, and rot.

> The Brain was speaking about how all hams world-wide
> are in violation of Part 97 because they include a few bucks to help with

All I said was that hams with US calls shouldn't participate in ham radio for money, per
Part

97.

> He got his head handed to him SOooo rather
> than admit defeat, he throws ethics into the mix (as if he had any to

This is funny in some way? A four year old child was killed during a car-jacking in St Louis
yesterday. Is that funny too?

> Hey Brian..don't forget..always use those last two if you want to break
> into the pile ups

Is that why I always hear "Tango EEEtaly" incessantly on the DXers transmit freq?

I got a few of the deatails wrong, but they weren't even the THRUST of my original post. If Martti was less than a millionaire, that would have made my point -even more clear-.

"How is it that one single [less than wealthy] ham can have such an impact on opening up developing countries to ham radio and the ARRL is having trouble just maintaining the numbers in America?"

You continue to be very defensive about this thing. Are you making money from ham radio?

There's that Cecilain logic again,

Only that he is subject to Part 97 if he holds a US call sign.

where in the above statement did you even mention that he was in America?
Of course he'd be subject to it. Any amateur operating legally in the US
would be subject to it.

Your statement presumes that ANY amateur anywhere in the world holding a
US callsign is subject to US Part 97 (I know Brian, it's not what you
said, it's what you meant to say, but trying to mind read someone with no
brains does cause problems :-))

Nice try strike 4 you're outta there

CASH COW oh Brian you are so funny. Yep, those guys who put VK0 on the
air are rolling in the dough laughing at the dx community. I am sure the
Chatham Is guys are all planning on buying the big SUV's when they get
back with all the $$$ they're gonna earn

Face facts, you're argument has no merit. The FCC doesn't agree, the dx
community doesn't agree, even the people on the NG don't agree

Why not contact Hollingworth and ask him..he won't agree with you either

carry on simple Simon maybe we should call you atlas

strike 9 end of inning

I have the best solution

Brian sweety,

if you feel so strong about sending money or helping fund a dx-pedition
to a rare one DON'T!! DON'T send a penny, don't send a dime. In each
QSL request, be sure to cite Part 97 as the reason that you are owed that
card. Be sure to sign your name. Don't use the buro because it costs

money to send your cards and don;t expect them from the incoming buro because you will had to either buy postage credits or supplied SASE's which cost money.

Start No CASH International and lobby for the complete outlawing of all sending of any monies oversees Set up a web site, nominate board of directors for life and have a ball

Bottom of the ninth 2 outs count is 3 and 2 tying run on 3rd, winning on 2nd. The pitch to Brian...oh my, it's a wild pitch, it's going to be way over his head and HOLY COW, the doofus swings STRIKE 3

GAME OVER GAME OVER Can you believe it? what a doofus

Steve/KF2TI, then why don't you let me do that? Instead, you jumped in here, tried to
discredit me,
and called me names just like you call everyone else here. If you don't have anything
constructive
to say then stay out of it.

All Americans, visiting aliens, and illegal aliens are subject to Part 97 in America.

> where in the above statement did you even mention that he was in America?
> Of course he'd be subject to it. Any amateur operating legally in the US
> would be subject to it.

Even amateurs operating illegally in America are subject to it. So is anyone else who
wishes to
operate on the amateur bands in the US. Except perhaps diplomats.

In Adellian logic, the subject of the thread gets changed by Steve and then he says I
changed it.

Steve, I just realized that I am arguing with someone not interested in ony other point of
view than
his own. That makes me wonder why you have a callsign. Do you ever actually talk to
anybody?

> > > Best let him play dx'er on 10 meters. I'm sure after reading a few of

What do you need an amp for? I never had any problem working the 10W no-code JA's.

Dual receive? Who else you listening to?

Steve. I only have time for one more name calling, so give it your best shot.

> this is getting boring Brainiac

There it is. I knew you wouldn't disappoint me.

By the way, I'm sure the dx bunch are tired of the drivel. You can redirect the thread back to
.policy any time you want.

They are? Have you reported this?

> Face facts, you're argument has no merit. The FCC doesn't agree, the dx
> community doesn't agree, even the people on the NG don't agree

You don't speak for the FCC, do you? It would be laughable if you spoke for anyone on .policy as
they know you. So it boils down to YOU don't agree with me.

> Why not contact Hollingworth and ask him..he won't agree with you either

Now wait a minute. You just said the FCC doesn't agree that "ham radio shouldn't be a cash cow." Do you mean you don't know if they would agree with that?

> carry on simple Simon maybe we should call you atlas

That would be the nicest thing you ever called me, Steve. It would be a welcome change of pace.

Thanks for reminding me. I've do have a pile full of IRC's that the dx have sent with their cards. The post office never did know what they were supposed to do with them. Do you think the ARRL QSL buro could use them? Perhaps I'll include them with the next batch of outgoing.

> Start No CASH International and lobby for the complete outlawing of all

ohhhh shaking in my booties.

SO far all you've done is attempted to slander a person and all but
called him dishonest. You've lied and distorted facts and then when
presented with the truth lied some more.

As to names, I suggest you take a look in the mirror

As to butting out Fuggetaboutit peabrain. I attempted to provide
correct information and you've distorted that so get use to it bub.

As to discrediting you...you do a good enough job as it is and you
certainly don;t need any help from me in that department

keep up the good work. I would suggest a job with Ringling Bros as a
clown, you have all the credentials now

TTFN

> the numbers in America?"

(1) Martti, dealing on the level he does in working with higher up
government officials in these countries has access to areas within the
governments that most regular people do not. It's call reporte (sic).
He probably is in a position to ask certain favors of these people and
one of them is to promote amateur radio. You seem to find some fault
with that as you continually go out of your way to slander Martti.

(2) What does the numbers in America have anything to do with
international amateur radio? The fact you have even put the 2 together
proves you less than sincere in your comments proof again of your
cecilian two faced bullshit

>
> You continue to be very defensive about this thing. Are you making money from ham
> radio?

Gee Brian this continual name calling. How ignominious of one on such a
noble quest. You were probably a crusader in a previous life, possible a
grand inquisitor. Now, you're just so much NG trash

Read you're above statement asshole. According to you, "hams with US
calls shouldn't participate in ham radio for money, per Part 97."

Based on your criteria of using the DX community as an example, you were
challenged to find the exact portion of Part 97 that specifically
applies. You couldn't because it does not exist and at that point
suddenly threw "ETHICS" into the mix Sorry, doesn't wash here or
anywhere else.

Really??? The 10watt JA's are prohibited from contacting anyone outside of Japan. Give me a few 10 JA callsigns you've worked Gosh, Brian, at least when you lie about something, lie about something that can't be proven.

Only have the one HF in the home and one in the car. Actually, I put the
1000MP up for sale. I have heard alot about the new 756Pro and have
already ordered one. I'm having it delivered by the dealer at the
upcoming hamfest March 4. I'll let you know if it's everything that
everyone says it is

>

Dear Brian,

How are you? I hope you had a pleasant week. I have a few questions for you. I hope that you can provide answers

(1) Why do you insist that the ARRL promote amateur radio world-wide, yet not make the same demands of the JARL, the RAC, DARA, et al?

(2) In light of your insistence that Part 97 covers all amateur world wide, you you feel that organizations like the NCDXF, OXDXC, and many hundreds of DX clubs and organizations that donate money to fund dx-peditions, should be prosecuted to the full extent of the law?

(3) In regards to question 2, why do think the FCC has no problem with US amateurs contributing donations in the form of monetary sums, IRC's and SASE's? Why do you feel that this is illegal yet, by your own admission, practice the same?

(4) Why do you have this obsession with one major player in the DX world, yet do nothing about the 9 other major players?

(5) Why do you refer to dx-editions as "cash cows"? Are you suggesting that major dxpeditions like VK0IR or 3B9R or ZL9CI actually produced a profit from these alleged contributions? Have you ANY proof at all to back these accusations up?

(6) Do you feel that foreign amateurs holding US calls, outside the US should in fact be held to the same Part 97 as US based amateurs are?

(7) What dxpedition (outside the US and Caribeean) have you participated in. When people qsled and included a dollar or SASE, did you return the money and explain to the sender that you are doing so because to do otherwise is illegal?

Here is your opportunity to present your answers in a clear, concise manner with no snide remarks, no innuendo, etc.

Thank you in advance for your time

73 es good dx

There is no exception for diplomats operating from the U.S. and there is no exception for me while operating from Tanzania or in Finland or wherever. A radio amateur is subject to the regs of the country from which he operates. Now if the host nation's local authorities try to enter the home of a diplomat in order to stop him from operating, that is another story.

```

You got almost all of the details wrong and managed to misinterpret what
Part 97 says along the way.

> "How is it that one single [less than wealthy] ham can have such an impact on opening
> up developing countries to ham radio and the ARRL is having trouble just maintaining
> the numbers in America?"

Because he devotes himself to doing it and spends almost all of his
expendable income in doing so. Martti doesn't have to attend to mundane
Finnish amateur radio domestic magazines as he is not the SRAL (the
Finnish equivalent of the ARRL). Even the SRAL does not spend large
sums of money on amateur radio in developing countries.

Is it your supposition that the ARRL is responsible for spending its
funds on DXpeditions, training and outfitting radio amateurs in foreign
countries? Why is this issue coming up at all? If you, as an
individual would like to duplicate Martti's efforts, feel free.

> You continue to be very defensive about this thing. Are you making money from ham
> radio?

...by the bucketful, Brian. After having local artisans skillfully
craft the sterling silver keyer paddle and after paying off the BMW,
I'll probably invest the balance of the income from the QSL scam on
investment properties in the Virgin Islands. That's after QSL manager
WA8JOC skims his 20% off the top, of course. I'm rich beyond your
wildest dreams and I owe it all to amateur radio.

You are about three-quarters goofy.

603. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-26 00:00:00 UTC
From: Ron <no-spam@no-spam.com>
Message-ID: <60Tt4.607$Em5.76683@news7.onvoy.net>
Source record: 21887

You are welcome to connect to the internet accessible AR-Cluster at KC0DJO
in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH. Please
enter your QTH in the form: Chicago IL or Oslo Norway so that we will know
where all our new friends are from! You will also be
reminded to SET/LOCATION, that's optional but recommended. If you set your
location, then the AR-Cluster will calculate beam headings for you to
various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and Command
List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet
connection. Its a huge advantage as then your logging program will monitor
the dx spots and alert you to contacts you need.

However, here are very simple instructions for using software already a part
of Win95/98:

First connect to your ISP as you normally do when using the internet. Click
Start then click Run.
In the box enter "telnet 209.32.226.63" (without the quotes of course). Now
click OK.

You should now be connected to the KC0DJO AR-Cluster.

Enter your call. If what you type does not display, then you will have to
turn on local echo. In the Telnet window click on Terminal /
Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C

HELP

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

Hello girls :) and boys!

What do you think about exchanging QSL cards for qsos in contests?
Is it OK?
I think that it is VERY OK. QSO is finished, even we exchange only rst and number.
For some signs, even countries, it is maybe the only way to work `em?!
Sad, but true. Especially if you don`t have a big power. Not to talk about qrp stations...

Best regards,

UF

According to the manual for TRLog, the complete spec is on
http://www.kkn.net/~trey/cabrillo/spec.html

There's some documentation of the format in the TR manual. The
definition of column 81 varies depending on the contest, but for "other
ARRL and CQ contests, and the Stew Perry contest" it's the transmitter
number, used in the multi-two category.

Hi Mike,

Sounds like you've been bitten by the DX bug! While a tiny thing it can take a big chunk out of your heart, mind, soul and wallet - Hi.

Welcome to the world of the severely infected - there ain't NOTHIN' like it!!!

73,
Tony, WF1N

613. Re: DXCC App Question

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-27 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <38B9E141.E9B87D45@erols.com>
Source record: 21801

Hi Tom,

I believe 107 is a comfortable margin provided you feel ok with the entities after checking the current DXCC Countries listing. If there are some prefixes you are not certain of, just shoot off an email to dxcc@arrl.org and ask them to provide guidance. (I would not inundate them with a lot of prefixes; assume there are just a handful you are not certain of.)

I would check the current listing of DXCC entities and then look at the deleted entities. Credit for the latter can be given if the date of contact in questions agrees with the date(s) shown in the corresponding footnote. For example Czechoslovakia OK-OM is on the deleted list. It's corresponding footnote says "Only contacts made December 31 1992 and before, count for this entity". So the info is there for you.

Field Checking is not mandatory. Strictly optional. If there are no DXCC Field Reps near you, or the drive to them (it takes two to check cards until April 15th when only one will be required) is too long, you can send them via regular mail, first class, certified or registered or other mailing facilities UPS etc, to CT.

Another option is to wait for a hamfest and find out if there will be someone there to check cards. Someone from the DXCC Desk attends some of these functions, not all, as well as DXCC Field Reps and they can check the cards there for you. Please recognize that until April 15th DXCC Field Reps cannot check all the entities listed under the DXCC Countries Listing at this time. However, if a representative from the DXCC Desk is present at the hamfest they can.

I hope the above is some assistance to you.

Addendum to my first message:

Regarding OK-OL Czech Rep. and OM Slovak Rep, they are current entities however only contacts made January 1 1993 and after count. (Footnote 21 under current entities.)

I applied successfully 3 years ago with 105 cards which I checked over. Even at that my Ireland card had no date but they counted it anyway.

I have a card from OD5NJ for a QSO on 21 February of 1999. Don't remember where I sent it, but I used an IRC. (I try to avoid green stamps where possible) Don't remember how long it took - it may have been awhile.

Tom,

Congratulations on your DXCC.

You should be aware that there are substantial changes being made in the field test program. I am not an expert -- however, the system is being changed to allow field checkers to verify all cards that are not more than 10 years old. Check with HQ and see how that may affect you.

The problem comes down to identifying intent. If the
conversation can't be shown (on face value of what
has been said) to violate the rules, then (IMHO) it
is OK.

Cheers,
Bill K2UNK

a
>diplomat? Right?

I would say yes. When he is in America he is
either operating under one of two possible
scenarios:

1. He has a US ham license and is using the US
call. Part 97 certainly applies.

2. He is operating in America under a reciprocal
license agreement...in which case he still must
operate under part 97 rules (IMHO).

Cheers,

622. DXCC App Question

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-28 00:00:00 UTC
From: tom <tsokol@adelphia.net>
Message-ID: <tqju4.2145$jq5.35381@news1.news.adelphia.net>
Source record: 21806

I am about to apply for my first DXCC. I have 107 confirmed. Here are my questions:

1) Is this a reasonable "Margin for Error"? Most of the calls I worked are pretty run-of-the-mill, except for some unusual (for me) Russian calls that I'm not 100% sure consist of separate entities. (And yes, I checked the ARRL prefix list...it was not always helpful.) I have about 120 worked...should I wait for some more cards to come in before applying?

2) Some of the countries were worked when I was first licensed 10 years ago (i.e. Czechoslavakia) and others just this past year when I became active again (i.e. Slovenia, which didn't exist 10 years ago.) Would these count as separate entities?

3) Is field checking of cards mandatory or optional? Should I just send my cards to CT or use the field checking method? (There are no field checkers nearby...I would have several long drives.)

Thanks for any advice!

Tom

Tom:

I would not use field checking. There are a number of countries that
cannot be checked in the field, and therefore your 107 might fall
short. Have it done in Newington.

Has anyone had any luck getting QSL fm OD5NJ? Sent mine with SAE and
IRC/$(dont remeber which)to address in QRZ
which he said to use.
No response in almost 4 months.Can't get him to answer e-mail either.
Tks for any info
Joe W7KQU

629. QSL info of VK9XS, et al.

Newsgroup: rec.radio.amateur.dx

Hi to everybody

Could somebody tell me the QSL info of the following stations:

VK9CP, VK9XU (manager DF6IC): address of manager, pse.
VK9CN, VK9XS (manager DJ4OI): address of manager, pse.
VK9CO, VK9XT (manager DJ3OS): address of manager, pse.

EY8CQ (manager DJ1MM in 2000 CB): address of manager (Is the address on
Buckmaster correct?)

6Y/DL2AAZ (manager DL2AAZ): address of manager.

Thanks to all and good DX,

Stefan

Info I have 425 DX News # 455 dated 22Jan2000 says QSL direct:

Gabriel A Mardiros, OD5NJ
POB 70647
Antelias
Lebanon

You may want to try Lebanon Postage from one of the foreign postage
suppliers or a couple of green stamps (well concealed)

Or wait till after April 1 and then the new DXCC Field checking format kicks in. The only cards not accepted will be 160m and those that are obviously changed.

Each ARRL section can have 1 checker approved by the section manager and each DX club with 25 members or more can appoint 1 field checker as well.

If you have a current ARRL DXCC country list, you'll be able to see which cards currently can't be field checked as well

The forecasted peak for Cycle 23 is summer to fall of 2001. If that forecast is right we can expect as good or better conditions then what we have had recently especially on 10M. Even after the peak there are another 4-5 years of good conditions to keep us occupied. I don't think we have seen the best of this cycle yet for 10M or any of the upper HF bands.

Source record: 21823

Hello,
Could somebody please tell me where I could find a good list of DX
places with latitudes and longitudes? I have a list with major cities
of the world, but it doesn't list places like Kingman Reef.
I am writing a computer program to control an antenna rotor. A
reply via email would be much appreciated, since I don't normally follow
this newsgroup!

- Rob

P.S. Return address has been mutilated to inhibit spam. My real email
address is "rclocher3 at bigfoot dot com".

641. Clipperton 2000 Bulletin #4

Newsgroup: rec.radio.amateur.dx
Date: 2000-02-29 00:00:00 UTC
From: pa1aw@qsl.net
Message-ID: <38bc0aaa.666175@news.hccnet.nl>
Source record: 21825

"The team should be off Clipperton around 5AM Tuesday morning,
February 29, 2000 (California Time). They will then look for a landing
spot on the island. The search for a landing spot could take a day
just finding a reasonable approach to the island. Clipperton has very
high surf which strikes a reef surrounding the island thus making the
approach very difficult and dangerous.

The team has indicated that they plan to come on with multiple
stations to ease the pileups. If they can get the site set up, look
around 0000Z, March 1 on 10/15/20 meters.

They have also indicated that the following satellites, AO-10, RS-13,
UO-14, AO-27, SO-35 will be the ones they will be trying to use."

Today (February 29th, 2000)at 0400Z they were at 11 39N & 109 32W

Congratulations Mike ..sounds to me like you have the bug. Nothing gets me going like working a 'new one'. Now is the time to start qsl'ing your DX contacts so you can accumulate cards for your DXCC wallpaper. I let several slip past with no logbook before I got serious. BTW you have a great 10M rig and you can do a lot with a simple antenna when the band 'is in'. I have 245 countries on a dipole. I am not an old-timer but still I welcome you to what I think is one of the best aspects of Ham Radio - DX!!

Hey Guys an Gals,

I'm a cb'er trying to crawl from the slime and walk erect. I want to start on 10 meter (legally).

qrz.com has a sample test on their site. I took the novice test and passed with a 71.5 % without studying.

Is this pretty much the same test I'll take in reality?
Also I hear talk of Apr 15th, will it be harder or easier after that date?
Also again .....any tips for a first timer?

Ken
Texas

Yep, got mine abt 2 weeks ago.

Very professionally produced card it was too.

Cheers, Bill G0VDE

I have heard of many passing various levels of the Ham tests by doing the qrz online tests and nothing else. I don't think anyone really knows yet what the new tests will be like. Good luck. See you on 10M

Yo! John -- good show, not easy with all the KiloWatts and tower/beams on the
air.
So congratulations are in order.

I mess with QRP 5 (Watts) and a vertical occasionally -- so know the drill.

Not necessarily, Walt. I did it in about 3 hours one afternoon running between Columbia SC and the Virginia line during a CQWW CW DX contest a few years ago, and that was sharing the drive time with my son. Of course, we do know that contests bring out a lot more opportunity in a short time frame. One of the lesser challenges is the ignition noise that raises the ambient receiver noise level. I'm sure there are many stories like mine. However, that should not take away from John's feeling of accomplishment. After all, working DX is a very personal experience with many variables.

Here's another watts-per meter story you might appreciate. Back in 1989 I was fortunate to be in England over the ARRL SSB contest weekend in March and was given the privilege of operating from the Cambridge University station for a short time on Sunday, thanks to Martin Atherton. Well, I had called home to tell my son, who was a 19-year-old college student with a ham license home on school holiday for the weekend, to suggest that he try to contact me during the contest. He decided to get on the contest Friday night to see if everything was o.k. Hearing a number of dx stations calling CQ, he gave it his all and wound up totally frustrated, since none came back to him. Finally, he was able to get and exchange out of a chap in Mexico. He did notice that tuning up the rig was a bit touchy. The next morning he rechecked the setup, only to discover that he had been calling on a 5-foot piece of unterminated coax that I had disconnected from the outside antenna switchbox to avoid lightning strikes! Needless to say, the rest of his contest efforts went a lot smoother, and we eventually hooked up for a contact on two bands on Sunday.

I've always marvelled at how wonderful ham radio is, and never was I more impressed than his feat -- 75 watts into a 5-foot piece of unterminated coax working DX!

Red N3TG

P.S. John, it sounds like the mobile DX bug has bitten. Good luck on DXCC mobile!

The log search on this page clearly indicates:

1992 FO0CI Clipperton Island Log Search

You can search through the logs of the 1992 FO0CI DXpedition below.
Note that the logs were originally on paper and transcribed to the
computer, so there may be errors.

Looks clear to me.

Yessir !!! If you can make current flow, a field will be generated.....

That bathtub antenna is an excellent example. This past Field Day, I tried using a dipole for 20 meters, made of cotton 1/4 inch cord.....SATURATED in "Salty Type Fluid" carefully collected over a period of a couple of weeks. Preliminary tests showed it would work. For F/D, myself and another sucker hung up the stinky thing, clipped on a hunk of 450 ohm twin-lead and matched it up. The RF was going "somewhere"....but we could only hear STRONG signals. I guess the Ohmic Loss on the "wet antenna" was just too much resistance for the tiny received current induced into it ! But, by the Old Man, we tried it !! 73 "DM"

Today I got my first ever cards from the bureau. One was for a contact
on June 23, 1998 -- only problem is, I've only had the callsign since
May, 1999, and there's at least a one year clearing period with our
ACA, so something's amiss. I've never had a contact with that station,
so it's not a mistaken date. There's no email address at QRZ or Buckmaster
either.

So, what to do -- just ignore it I suppose?

Hamish VK3SB

I've received cards like that too. Once I got a 40 meter LZ card at a
time when I was only operating mobile from the west coast of the US.
I wish it were true, but apparently he copied a call wrong. Just toss
it.

Bill, W7TI

666. Clipperton 2000 Bulletin #5

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-03 00:00:00 UTC
From: pa1aw@qsl.net
Message-ID: <38bfdb66.2138566@news.hccnet.nl>
Source record: 21653

March 3, 2000
The FO0AAA team, slowed by very bad monsoon like rains were hampered from landing on the island as scheduled. They did get on shore, operating from the southwest side of the island near Clipperton Rock. Today (March 3, 2000) the team announced that they have made more than 14,000 QSOs in 24 hours. This may be a world record!

They are active now on all the bands 160-6 meters. The team is now ready to activate the satellites but first must get the pass information from pilot stations as their computer assigned to the satellite station crashed and all data and prediction software was lost.

Please monitor http://www.qsl.net/clipperton2000 for further information.

> was it a slim?

It was the right frequency & split. You mean Thursday morning? (your time) That's when I heard them. (though I would not be at all surprised if they were in the same place this morning) And they were working Europeans. They are indeed almost unbelievably loud here the two times I've heard them, and DX Summit has been reporting excellent signals on other bands too.

I haven't heard any reports of slims pirating that call, (they said that's why they didn't announce the call in advance) though now that they're on, I'm sure some scumbag will try it. There will be a log search, (http://www.qsl.net/clipperton2000) but not until after they get back.

Yep, or write "NOT IN LOG" and put it back in the bureau. My guess is
that someone copied the call wrong. (there is now a WI9WI who's fairly
active, and I usually get 2-3 cards in every bureau shipment that don't
match my log. They're probably Jim's. I feel kinda sorry (but not too
much) for the European station who went to the trouble of obtaining a
U.S. 60-cent stamp & sending a SASE with his card for "C6A/W9WI". I've
never been to the Bahamas. Jim has.)

Message-ID: <38BF655D.E3109190@bellsouth.net>
Source record: 21847

Those who've been on this group awhile probably think I'm being a broken record, but since we seem to grab a fair number of newbies...

Doesn't anybody *listen* to the DX before calling?

Geez. Found the FO0 on 28.025 late this morning. LOUD! Swung the antenna down there, hit "SPLIT", and tuned up above .025 to try to find out where he was listening.

And promptly turned the radio back off. There was no way to tell what part of the spectrum between .025 and .045 he was listening on - because at least 20% of the pileup was calling continuously.

FO0AAA: W1AW? 5NN
Pile: <qrm>6ZZ KQ0X<qrm><qrm>3AAA<qrm>

Continuous calling like this hurts you, the continuous caller:

It takes the DX longer to complete a QSO. They're going to keep trying to complete with W1AW until either they're sure they've got the call right, or they know they aren't going to get it. If you keep transmitting on top of W1AW, it's going to take that much longer. (and if you force them to give up, you can bet they'll take it out on you, by ignoring your call & working someone else. They have plenty of choices!)

(by the way, these guys were also LOUD on 40 meters last night!)

Hi all.

I'm actually looking for two(2) full Drake C-lines, but I'm willing to put them together a piece at a time.

In particular, I am looking for the R4-C, T4-XC, AC4, MS-4 plus station mic. All must be in as near-mint and fully operational condition as possible. Need manuals and interconnect cables, too.

The R4-C must have a full complement of xtal filters, NB. Late production version preferred.

Please email with price, condition, and any mods that have been performed to:

NeilR@innermedia.com

or you can phone me at (603) 465-2788.

Thanks in advance.

It was probably still legit.

There aren't any online logs yet. According to the webpage, there will be after they get back, but they aren't sending log data off the island during the expedition.

(btw, that was me you worked at W4CAT on 10 meters this afternoon - but 20 hours without sleep erases my ability to remember my own name, let alone anyone else's...)

The first thing that crosses my mind is - he's got the call wrong.
Especially if it's CW QSO, your call is very easy to copy as VK3SD, HB, HD
or so.

It wouldn't be fair to ignore these cards. It may be the only contact with
VK for someone. At least let him know he "didn't make it" so he can keep
trying. I get a few cards that don't match my log every month and I always
send them back with "not in log" note.

In your case, there's something else that you may want to think of. Could it
be that the previous owner of your callsign has moved but never got in touch
with ACA and never paid his yearly fee so the call has been reissued without
his knowledge ? He may (have) be (been) using the call occasionally.

I'd send that particular card back with short explanation but if same
happens again I'd consider looking for ex VK3SB. I hope he's not SK.

I have received a few cards directly for VK4NM contacts prior to January
1998 when I was licensed with this call and I managed to find the previous
owner and forward them to him. I don't know what happened after.

I would send it back in your next batch to the buro.

Obviously someone mislogged or in some other way wrote the wrong call down somewhere.

The possible permutations are considerable so let the originator of the card figure it out. Maybe write a note on it saying "Sorry OM, not in log Only licensed since 5-99."

They will figure it out, or not, but at least they will get feedback on it.

From a DXer standpoint, what would most of you all consider the best linear (2KW)?

I have heard good things about the Heathkit SB-220/221, the Drake L-4, the FL-922 and the Henry 3K/5K... I am told the 3-500Zs last longer in the Heathkit... but I know each linear will have its good and bad points.

So if I were to be looking for a good linear for DX work with an Icom 735 driving the beastie, what would you all recommend?

I know... an Alpha... but I do not have that kind of money to spend.

The best amplifier is aluminum. Cut it to various lengths, spread it
out on a long, bigger piece of aluminum, and put it up in the air
as high as you can get it.....

I agree with the basic concept, but "as high as you can get it" is not the optimum. Don't believe it? Do an analysis using ELNEC or other antenna program and you'll see that beyond a certain height, you start losing ground reflection gain and performance actually deteriorates. If you get so high that you're in "free space" you will lose about 4-6 db or so.

Bill, W7TI

True enough, but I am on a small city lot and my Force 12 C-4 on a 15 foot mast and 55 foot self supporting US Tower crankup is about all that the lot can deal with (or my wallet for that matter).

Well, then adjust your attitude. My ten meter antenna is on a 14 foot
long piece of fence rail pipe on the roof of the house, total maybe
25' high. I stole the frequency that W3LPL was using in the ARRL DX
contest this morning and I'm running 99 watts.... I think it MUST have
been my attitude that made that possible.... it sure wasn't my
amplifier.

I can understand your wallet hurting after you called Force 12.....

I have a question about interference, I have an new Yaesu FT-100 I have installed it in my 4x4, upon tuning & testing the SWR of the antennas (I have 2 on the truck)I came across a major problem. My stereo speakers give off ENORMOUS feedback making the radio un-useable !!!!!

I 2 Antennas @ 1.5:1 (HF) & 1.1:1 (VHF), the problem is my stereo speakers in the offroader almost explode when I key the microphone. Is there any explanations for this???? I have checked the radio and the antennas with various
different equipment in case mine was faulty, but the radio seems to be the most
perfect installation I have ever seen...

Source record: 21676

March 5, 2000

The new 30M frequency will be 10110 due to heavy QRM reported in the Scandinavian and northern Europe areas.

72 hours of operation has yielded in excess of 39,316. The data reveals that W/Ks are about 35% of the Qs..which is quite similar to the '92 operation. The propagation paths are now being watched.

From the Island by James 9V1YC:

The guys are feeling good but are tired as a result of round the clock operation which requires each operator to do a full 9 hour shift each day. Most operators are averaging 2-4 hours sleep per day.

Here is the station rundown.

CW: A3S, A3WS, 40m vertical, 30m vertical, Battle Creek special (40/80/160), 80 inv-L.

SSB/RTTY: A3S, A3WS, HF9V, 6 ele 6m yagi, MA5B mini beam, 80m inv-l

Full time (24 hour) op positions: 2 x SSB, 2 x CW, 1 x RTTY, 1 x 6m

Op schedule is based upon 8 x 3 hour shifts. Only the 2 SSB and 2 CW positions are assigned, as we have a full time dedicated RTTY and a part-time dedicated 6m op. Everyone does 3 shifts a day (9 hours total)with no more than 2 consecutive shifts at a time. Each shift is given a
reccomended band to attack, and priority is given to Europe from 1500-1800z and Japan from 0000-0300z on the high bands.

So far we have been evenly hitting all areas with no problem, and pileups have been extremely well behaved. Europe is loud, and easy to work, and everyone seems to be having an easy time (as evidenced by our logs which are overflowing with EU!!).

Those folks outside of NA, EU or JA (e.g. ZS,YB, VK/ZL) should not have a problem, as everyone is under strict instructions not to exclude any of these areas - even when working a priority zone. We currently have a statistically healthy number of VK/ZL in the log - which indicates they are getting through. We also check periodically for these places during pileups - and even turn the antenna to be sure.

We are on the South West side about 400 yards south of 1992's campsite. Our SSB tent is situated about 1000 feet from the CW/Sleeping tents - and so far we have no interaction at all.

I'm about to apply for my first DXCC. Most of my 115 confirmed are pretty run-of-the-mill stuff, but I am confused by a couple of Russian Call signs. Most I think are special "contest" calls and they don't show up on the ARRL list. Or sometimes the call shows up on the list (or an on-line Prefix-Look-Up) as one entity, but the name of a different entity is on the card. If any of you experiencied DX'ers out there could help this newbie (without flaming my ignorance!) I'd appreciate it:

CALL LOOK-UP SAYS CARD SAYS

UZ9FZD Ukraine Asiatic Russia
UC2ABC European Russia Byelorussia
RQ9W Asiatic Russia Latvia
RJ9J Asiatic Russia Tajikistan
RB0CG European Russia Ukraine

Thanks!

=======
The prefix alphabet soup is a tough one to muddle thru, Tom. US stations in the 4th call zone with a W6 call!!!! Russian stations that show on several Prefix data bases -- but somewhere else!!

There are several very good data bases on the web -- see URL:
http://www.ac6v.com/pagev.html#PR

Five or six of them there -- but doubt it will resolve all the differences you have there. Some are for Russian calls.

Good luck with the prefix soup.

=======
The prefix alphabet soup is a tough one to muddle thru, Tom. US stations in the 4th call zone with a W6 call!!!! Russian stations that show on several Prefix data bases -- but somewhere else!!

There are several very good data bases on the web -- see URL:
http://www.ac6v.com/pagev.html#PR

Five or six of them there -- but doubt it will resolve all the differences you have there. Some are for Russian calls.

Good luck with the prefix soup.

Seems like the guy who had the card printed has a better idea where
he is than the guy who made the prefix list.....

A lot of Russian prefixes depend on the date of the contact. What is
one country today isn't necessarily the same country a few years ago.

Neal, I have owned a few amps in my time and the guy on the other end does not know what makes the signal on your end. 1kw is 1kw no matter what tube or tubes is making it.I have personally had BTI's, henry 3k Premier, 2 30s1's,30L1, al8oa, fl2100b and a clipperton-l. I am presently using a Collins 30S1 and a Dentron Clipperton-L.for the money(about $450-$500) I really like the clipperton-l amp.runs 4 x 572b's(cost is negligible for replacement) and will make 1300w's with 100w's drive.also a good all around amp would be a sb-200 or the al80a. now if you said you wanted amp for contesting then thats a league all its own, where the Alpha's and Henry's own the field.best of luck to you and a kw and a good antenna will work a lot of dx,maybe not first in the pileup but you will get them. An improved antenna gets you gain on receive and transmit -- an amp
only helps on transmit.

Message-ID: <38c39b56.3619144@news.hccnet.nl>
Source record: 21689

March 6, 2000

The 96 hours of operation have resulted in 50,135 Qs setting a new record for Clipperton and joining the ranks of the top 25 expeditions for Qs. Another 2 days could result in 70,000 Qs or more.

The team is well.

80 CW : When FO0AAA is on 40 and 80 CW, the 80 CW XMIT frequency will be moved to 3501 due to harmonics. Additionally, the team will begin to listen up over 025 when on CW. Please listen carefully to the op's direction.

Six meters has been poor with openings mainly south with a Q total (estimate) of about 100.

The operation will continue to run at the same rate until 1500Z on March 8. At this time the team must break down the sites and be ready to leave the island by 0030 March 9.

Sounds like grounding to me.

Make sure you have a short thick braid strap bonding the body of the
FT-100 (mounting screws) to the body of the vehicle.

Do the same ting with the base of your antennas and I reckon all will
be sweet.

Any HF radio in a mobile shack needs to be well grounded.

707. Dxpeditions forget 40 SSB and now 160 SSB

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-06 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <8a0e7p$va9$1@nntp3.atl.mindspring.net>
Source record: 21691

Seems several Dxpeditions seem to forget that there are many 40 SSB Dxers in the USA. I get all sorts
of answers of why (BC interference, local fishermen etc) but I have worked 9M0S, 8Q7, HS, VR2, BY, E44, H40
and T8 in the past two years so there is a good chance that you can work in the USA. Lately the ones that do operate
come on too late (1400Z is 9AM or +3 hours after sunrise) or 2000Z to work EU but are not there at the hours for SE USA.
V73CW came thru before 0600Z recently and worked East Coast USA for an hour at 5/9 + (TX 7098 RX 7180).

As future DXpeditions post e-mail and web addresses I will be sending them the appropriate propagation times for SE USA/Georgia.
Please don't use excuses... work 40 SSB split!

I also note several have not listed a 160 SSB frequency. I hope this does not continue as I finally have my W6BCX MULTEE back up and want to add to the 166 countries I have on 160 SSB.

Dave K4JRB
40 SSB 341 All time 323 current
160 SSB 166 worked 165 confirmed

I have an FT-100 in my Jeep and the factory stereo works fine when I transmit. I'd say it's the installation. Maybe improperly shielded equipment or a poor ground.
Home stereo's are subject to this from nearby transmitters (house next door) all the time and it's almost always the stereo that's the problem. I'd try ferrite chokes on all leads and short solid ground connections to start.
Sounds like a tough problem, good luck.
Steve AI7W
(BTW you know that its illegal to transmit music over the ham bands, even in the background).

If the Stereo is an after-market installation, I'd try putting some ferrite toroid chokes on the speaker leads... as close to the stereo as possible, If you're using an audio amp, the problem may be a lot tuffer to solve.. you could try putting toroids at the amp speaker leads as well.

If you use an audio amp, try turning it off... Problem still there? Try putting chokes on the Stereo's output leads and possibly a choke/filter on the DC line feeding it.. If the problem is only with Audio amp on... put chokes on amp audio input leads and possibly the DC line (close to amp) Try again, problem still there? Try adding chokes to amp output leads as well. Try again.. Problem still there?.... I give up :-)

712. QSL from a contest?

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-06 00:00:00 UTC
From: Robert Lyons <boblyons@umich.edu>

======
You betcha Bob -- great source of DX contacts. Most contesters QSL, some do
not.
For QSL lookups -- see URL:
http://www.ac6v.com/page2.html
Takes a lot of poking around -- but you'll find most of them.

Also see URL:
http://www.waterw.com/~ncj/xpedit.htm
This might help with the operators call information

Oh,Tom!!
It is very very easy:
See very careful DXCC - list from ARRL
Before 1991 were one prefix's for Soviet republics and after 1991 become
independent country and divided prefix's by the new way.(See info with *)
and now my call UR5SEL but was until 1991 - UB5SEL
All info on QSLs are OK .
You have new countries .Congritulate!!!!!!!

P.S.Sorry for my English
73!
Vlady

I have found that some of the Big Guns want a sase (or green back outside of the US) for a contest QSL. I can certainly understand the cost of mailling QSLs for thousands of contacts during a contest and if I want the card bad enough I'm happy to help out with the costs.

By tracking on the air operations and published DX operating frequencies (many
DXpeditions send their op freqs to DX newsletters in advance), I've made a list
at URL:
http://ac6v.com/pagecall

These are typical and in actuality -- have heard DXpeditions operate many
different frequencies.

Comments welcome

Forgot to mention that for split ops, the DX usually listens up -- 5 to 10 kHz for SSB and 1 to 3 kHz little less for CW.

Although a rare rare DX station or DXpedition has been known to spread them out much higher. I remember one TX at 14.195 and listening 14.200 to 14.250!!!!!

724. Re: QSL from a contest?

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-06 00:00:00 UTC
From: Doug Smith <w9wi@bellsouth.net>
Message-ID: <38C3F6B0.6A426334@bellsouth.net>
Source record: 21758

Robert Lyons wrote:
> Is it considered appropriate to request a card from a contest contact?

Definitely. Virtually all DX stations will respond. (there are some
American contesters who don't QSL)

Do be sure to provide a SAE w/International Reply Coupon (for non-US
addresses) or a SASE (for US addresses including Puerto Rico, Guam,
Hawaii, etc.) if you QSL direct. And be sure you have some
envelopes/postage credits at your incoming QSL bureau.
(http://www.arrl.org, search for "QSL Bureau", you don't have to be an
ARRL member) Some DX stations automatically QSL via bureau whether you
ask for a card or not. And if you worked some less-rare countries
(Germany, Japan,
etc.) some of them want *your* card, for WAS, USA County Award, etc..

For what it's worth, any serious contest entrant today is keeping their
logs on a computer. All major contest software has a "QSL mode" which
allows almost trivially easy printing of QSL labels.

> (all assuming I can find QSL routes - exchanges are too short to ask.)

I use http://www.ampr.spb.ru/DB/index.html to lookup routes - seems
pretty comprehensive and accurate.

725. Activity on 6m

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-06 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <38c424a8$1$vtanpl$mr2ice@news.uga.edu>
Source record: 21759

Hearing interesting stories abouth the 6m band, I have been trying to work stations on this band since I got my FT-100 last Christmas. My antenna is a dipole. The only QSO was with a local DX-man about 20 miles away; he used a 6 el beam and was not too loud. There are many 6m spots on the PacketCluster but I have not seen any U.S entries. Any ideas? The radio appears plenty sensitive. Ignacy, NO9E

Neal

I have been reading with great interest the replies you have received. The first couple were on the mark then it seems the discussion moved into another dimension, the dimension of "why do you need an amp". I don't think you were asking if you should buy an amp or install a better antenna, you asked what was a good amp.

Here is my opinion. For all around value an amp based on a pair of 500-Z's is a good bet. If you can find a used H2K, floor console not the desk top, go for it. It is a great amp, well built, a very solid power supply they use oil filled capacitors not electrolytic and a good beefy choke for a choke input filter. The RF deck is straight forward, tuned inputs, a very solid and well proven design. It will give you about 1200 watts all day long.

I have a Henry 3k premier, uses the 3cx1200A, a very nice piece of equipment. I use it very seldom and only when chasing DX and the pile up gets unbearable and only after 4 or 5 tries with 100 watts do I turn to my friend Henry and ask for his assistance. He hasn't failed me yet!

Doug,

I have been using a program called Pathfinder to look up QSL routes. It gives access to a slew of sites, including QRZ, Buckmaster, and others. Works very well. If interested, look at http://www.qsl.net/pathfinder/

73,

Marv

I agree, in this day and age CT is radically overpriced!

I will never pay $80 for it... I would easily pay $30-40 for it.

The overpricing is one of the reasons software piracy is so prevalent.

Granted, but some linears work better than others... the circuits and construction is different. I have been also told that, for example, a 220 will have the tubes lasting 3-4 times as long. There we have a personal expense issue... would I rather use 1 set of tubes, or go through 4 sets, in a given period of time.

Fair enough... now, are the Henry's in the same price range generally as the Alphas?

> best of luck to you and a kw and a good antenna will work a
> lot of dx,maybe not first in the pileup but you will get them. John
> w3ayt@arrl.net

I know... my last antenna/tower was a Cushcraft ATB-34 at only 40 ft... and barefoot I have worked nearly 300 countries on 5 bands... mostly on 10 and 20. It is now the hard ones I am after and I have better things to do than dedicate 20 hours of my life to getting a rare DX through a pile of 4-land kilowatts... I have seen enough a friend of mine say "Oh, sounds like ____ is on" with a huge pileup, in a break key down and say his call and get the contact immediately. That is what I am looking for.

Correct. I did appreciate all the replies though, but you are right... the issue is what amp I would likely be happiest with, not wishing later I had bought a different one.

OK... quick question... why not the desktop model? No PS? Just curious, since you took such effort to point out the difference.

I can honestly say, though, I have yet to see one of those for sale... desk or floor. Usually a Henry I come across is a 3K or 5K.

> I have a Henry 3k premier, uses the 3cx1200A, a very nice piece of

That is the goal I have... I have no need to use the amp all the time... barefoot works fine in anything but DX (and maybe contests if you are trying to hold a freq or mash through a pileup).

Thank you Joe for your input.

If I were getting something new, I would look at the amps using Svetlana tetrodes, particularly the 4cx800a tubes, known in Europe/Soviet military designation as the Gu74b. These tubes are high quality, but cheap. Normal US retail is about $190 each, but you can sometimes find new surplus military tubes (Russian script on tubes instead of Svetlana trademarks) for half that if you really look.

In any amp, the cost of the tubes can be a major fraction of the total cost. It stands to reason that if high quality tubes can be bought by the manufacturer for less, in this case, much less, then at any price point the manufacturer can spend more on other components.

Tubes using a pair of 4cx800a Svetlanas come from Alpha, Acom, and QRO. I guess Emtron of Australia also makes amps with these tubes, but I don't think they have a US importer, and shipping it back to the factory for any reason might be costly and slow!! Anyone have one of these amps in North America? What is your experience?

I have been very satisfied with my QRO since 1997. Still full output on original tubes.

73, Ray K1XV

Right. And low wages are the reason why bank robbery is so prevalent.

Have you ever written a program like CT ? Do you realize how many
hundreds of hours of time have gone into a piece of software like CT ?

Since you know how much it's worth, I'm sure you've used it. How much
is your time worth doing duping and scoring after a contest ?

Cheap hams are one of the main reasons more good ham software, like
CT, isn't available. If CT was $2 than half the people using it still
wouldn't pay for it......

I read about this program on the Internet and gave it a try. I think it is a great little program. It makes chasing down QSL routes and addresses as easy as clicking your mouse. I agree with Marv's comments.

Dx Stations transmit 7040 to 7100 and listen where there is a low spot in
the Broadcast interference. Frequent listening spots
are 7160 to 7165; 7175 to 7180; 7195 to 7199; and 7220. Usually the
Dxpedition lists a freq on each band then tries to get on or near the freq.
Listen on 7045 at 2200 to 2330 to a group of DX run by a I2..you can hear
the I2 (he is usually 5/9 here so should be as loud in W1).

Howdy,

> And he would likely sell four times as many copies if he reduced the price
> to $29.99 and make more money in the long run.

Nice in theory. :-) Or nice abstract idea.

Also if the price were $2 it would not be worth anyones, or very few anyway,
effort to take the trouble to pay for it.

You mean developers are suppose to recover 'cost of development' on ham
software? :)

The general industry example does not seem to apply in this market.

I notice that CT, NA, and TR are all DOS-based programs. They should all be given away for free in my opinion. The fact that they can run on obsolete PCs under an obsolete OS is not a feature, it is a flaw. Just my 2 cents worth. I'm still looking for a decent logging program, and may end up writing my own if I don't find one soon.

I have owned and/or evaluated many logging programs and have finally settled on DXBase 2000. IMHO it is the Cadillac of all logging software. It has the same look and feel of any professionally programmed 32 bit database application. It uses the Microsoft Access database engine. It's feature list is really too exhaustive to post. It is a true 32 bit Win9x program.

Check it out at http://www.dxbase.com

I also have a link to the demo on my website listed below.

It is usually safe to assume all Russian stations with the number 9 or 0
in their callsign are in Asiatic Russia.

(having said that, I'm certain someone will pipe up with some
exceptions. But I'm safe to say RK0SXF is Asiatic Russia.)

There are what, 10 times as many people in the USA as in the U.K. I presume that means the USA is 10 times as good of a country? (hating to sound unpatriotic but that's certainly not true!)

Seriously, popularity doesn't necessarily mean quality. In a fully free market it would, but there are relatively few fully free markets in existance...

>I worked ZK1XXC the other day but I am having a hard time finding QSL info.
>Can anyone help?
>Larry N0SA
>

The 59(9) DX Report gave the operator as HB9BMY and said QSL via the HB9 bureau. I don't know if this means he doesn't want direct QSLs or not. Maybe he wants to avoid the direct mail hassle of envelopes, IRCs and stamps.

Best for me too. I worked 237 stations in the ARRL DX test, all DX of course, from 70 countries. All with a 1/4 wave vertical & an old Drake TR-7 that isn't operating with full power. What really amazed me were the JA's. I have never heard signals that strong from Japan. And they were in for hours. I even worked some 50 watt setups.

A good portion of my DXCC & WAS QSL's came from the contests. Most will QSL. You need to send return postage on all of them that don't go through the bureau. A lot of DX stations have QSL managers, so get yourself a good manager list such as the GO List.

Just my humble input here....I have the ACOM2000a and it works like a charm.
It is easy to switch bands, simple to input "custom" settings for swr tuning,
quite. Downside could be the price however...it is not cheap. It sits and
idles along until I want to "pump up the volume" so to speak and it does that
very effectivley.

George Daughters is the CA, agent service man for the EMTRON DX-X range, the only amp made by EMTRON using the 4cx800au7 is a DX-1.1.8-30mhz or a DX-1V 50-54mhz both are SINGLE TUBE.
the DX-2 range is using the 4CX1600B .and the DX-3 is using the GU78A
..there is 160 EMTRON tetrode AMPs in us allover the world now,not bad effort for 3 years work,
EMTRON DX-2 was the undisputed first Commerically made AMATEUR BAND Amp ising a single 4cx1600b.12 months before QRO.
i know because i am using the very first one with QSK. and 4cx1600b. been in service since MAY 1997.
new revamped home page will be finished by end of MARCH, most definitely worth a look then .

NEWS Press Release

Attention all Promoters, Radio and Television Hosts Reps!
If you are an individual with a radio or television program and would like to assure your audience an incredible time, please contact us at your earliest convenience.

Dear Sir or Madam,

I would like to call to your attention to a fascinating author, Dr. Louis Turi. Like his eminent predecessor, Nostradamus, he was born and raised in Provence, France. He is a noted an unusual astrologer of unparalleled track of unarguable predictions in our modern time.

Dr. Turi is a very unusual astrologer and, like Nostradamus, used to do he also uses the location of the Dragon's Head and Tail in his forecast. The response from Dr. Turi's teachings and books are just phenomenal. I am sure you will be, as much as your audience fascinated by his metaphysical knowledge. Please do not hesitate to contact me at the above-mentioned address and telephone number for any questions you may have.

Dr. Turi is regularly on national radio and his infomercial will be aired nationwide and Canada early 2000. If you are interested in booking Dr. Turi on your show I will be glad to send you more on his biography and copy of his books. Dr. Turi is the only Astrophile in the world that has been granted financial support from much Board of Directors to produce astrological videos and forecast on respective California and Nevada cities.

He also performs Astropsychology readings for people as well as predictions on the daily occurrence for the world. He is able to depict what each and every individual in this world is going through by just asking, "What month were you born?" He is also able to clarify to anyone everything that they've been through, buy knowing their date of birth. Not only is Dr. Turi an Astrophile that predict occurrences but also is also extremely practical and has quite a gift that needs to be shared to the whole world. Once you have discovered his talent you can be sure that your life will change in the most positive light. His simple personality and his incredible gift will amaze your audience. For more details you may call me and I will have Dr. Turi talk directly to you for a sample of what will be discussed on your show.

Please let me know if you would like to schedule an appearance on your show and I thank you again for your consideration.

Waiting in anticipation.

Sincerely, ~ Promotional Manager ~ Startheme Publications

Balony.....
There are several Very good logging program available either for free
or very little money. Examples:
Taclog, a VHF/UF/SHF contest logging program - used in most of the
european contests - FREE!
Logger - very good and comprehensive - free!
VQlog - Ver very good general purpose HF AND V/U/SHF logging program -
$ 15, with free and VERY competent support!

I bet you that there are more, these were just a few examples.

> Right. And low wages are the reason why bank robbery is so prevalent.

Specious and irrelevant.

My point is accurate. When software prices were brought down piracy decreased radically, and it is now mostly prevalent on programs with high sticker prices.

> Have you ever written a program like CT ? Do you realize how many
> hundreds of hours of time have gone into a piece of software like CT ?

No more than went into, say your average game.... far less so I would imagine, considering the hundreds of megabytes of coding involved in the games, the graphics technologies, etc, compared to CT.

So where does CT get off charging twice as much for something people will use far less (number of hours-wise)?

> Since you know how much it's worth, I'm sure you've used it. How much
> is your time worth doing duping and scoring after a contest ?

Irrelevant. I can, and do, use other free software or software that is had at a REASONABLE price... $19.95-$39.95 depending on the program.

I have used CT... would like to use the newest version, but I do not like being gouged. The only way I ever would is if it were given to me as a gift, or I was able to acquire a copy for less than $40.

> Cheap hams are one of the main reasons more good ham software, like
> CT, isn't available.

Yeah, right... 'cheap hams'. In this day and age and for what CT is there is no legitimate justification for CT costing more than $40 other than he feels some people will pay it. Well, I, for one, won't.

And in the case of software, since it only costs him about $5-10 per unit to produce, if he were to lower the price to $29.99 and quadruple his sales

by doing so he would actually make MORE money from his work.

You are making the argument that if someone works hard on something they should charge through the nose for it, even if it means only selling one item.

There is a commercial locally for a car dealership where a guy comes into a little store and finds a single candy bar for $600... and asks... "Haven't you people ever heard of selling in VOLUME?!".

Same thing here.

> If CT was $2 than half the people using it still wouldn't pay for
> it......

Irrelevant and highly doubtful. See above.

Exactly. Other expensive software has business and professional
applications... are not just for side use for hobbyists.

Bottom line, CT is way overpriced.

And he would likely sell four times as many copies if he reduced the price
to $29.99 and make more money in the long run.

Another example of how he rips off even those who pay his exhorbitant
prices... looking to upgrade from v8 to v9 of CT? Prepare to shell out
almost $50! And this is from people who have ALREADY paid him around $70!

Most software companies include upgrades for FREE, or maybe for a token
cost of like $10 to cover costs, but allow upgrades for free if you
download them from the net!

Charging $50 for upgrading from v8 to v9 is gouging, plain and simple!

Are you going to insult our intelligence by claiming that the development of CT is even the most microscopic fraction of that for W98? Seriously?

K1EA wrote CT a long time ago... his 'development costs' have long been paid off. Later versions were merely tweaking, and adding of additional contests... not what one would call highly labor intensive activities once you have the core program to work with.

It simply appears that K1EA chooses to have few registered users of his software with a high price tag than have more registered users with a lower price tag. And he also chooses to insult his registered users by gouging them for upgrades to software they have already paid for.

I'm sure it's a microscopic fraction. The market for CT is also a microscopic fraction of that for W98. It's entirely possible it's a much less microscopic fraction - but I don't think it's blatantly obvious that that's the case.

How many active contesters are there, people who send in logs for one or more HF contests a year? Maybe 10,000 worldwide? (I'm not going to count people who will call 10 or 15 contesters "to give you a point" - most of them wouldn't pay even $1 for contest software) Considering the fact that CT has two essentially equal competitors (NA and TR) and several lesser competitors (something W98 really doesn't have!) I would suggest that at the most optimistic, the potential market for CT is roughly 7,000 paid copies. What's the market for W98? Certainly 7 million copies would be a reasonable minimum estimate. That's a 1000:1 ratio.

Consider further, that MS can afford to sell W98 for less if they know it'll spur sales of their other products (especially Office 97) which sell for a lot more. (maybe it would be better to consider that from the other direction: a customer using Win3.1 feels they'd like to have a feature that exists only in Office 97. If W98 sold for $200, the customer might feel they couldn't afford the upgrade, and wouldn't buy *either* product. If W98 sells for $40, they might feel they *can* afford it, and will buy *both*.) CT doesn't have that option - K1EA doesn't sell anything else that's dependant on CT.

You do have ongoing support costs.

We use a lot of small-user-base specialized software where I work. (a local TV station) And we hear a lot of the same complaints: high ongoing charges without much added functionality.

I don't know. It's very hard to accurately estimate the value of intangible assets. (I've tried...) It's very possible that CT is badly overpriced. It's also very possible that Ken's losing his shirt & would lose it even faster at a lower price. Being an active contester isn't cheap; a $80 copy of CT is a microscopic cost when compared to a new

transceiver or the latest monoband Yagi. Personally I have my doubts
sales would really increase much after a price cut. But again, I could
very well be wrong. I just don't think it's obvious.

Why not, you insulted our intelligence by saying 80 bucks is a lot of
money :-) CT doesn't crash four times a day either, so it should cost
a lot more than Windows.....

>use far less (number of hours-wise)?

First of all, a commercial business distributes CT. And they don't do
it for free, I'm sure. There is a web site where users can download
utilities, updates, etc. The web site probably isn't free either. And
I would imagine the domain name isn't free also. So your theory that
Ken is putting $80 in his pocket every time someone buys the program
is all wet.

Obviously, we have a different value system. After a contest is over
in which I used CT, I can have my logs duped, checked, scored, and
ready to email in 3 minutes. As opposed to the 'old days' when we
spent countless hours getting logs ready to mail in. The time it would
take to manually do a log with a couple thousand contacts is worth
much more than $80, because I don't pay myself minimum wage. Even if I
did, I couldn't do a CQWW log for $80.....

I know a dozen people who use CT in every contest they enter. NONE of
them have paid for the software. And I'd be happy to bet you $80 that
if the price was lowered to $2 tomorrow, none of them would pay for
the software then either.

The video game theory proves my point. I wouldn't give you 2 cents for
a video game.....

But here's the bottom line. If you want to use CT, you either pay the
price for a registered copy, or get somebody who got a copy from
somebody else who got a copy from sombody else to give you a copy.
That's how ham software works.

I'm really happy I didn't tell you what kind of amplifier I have,
after seeing how much $80 is worth to you.....

Marv,
I absolutely agree with you with respect to DOS logging/contesting
software.
Two Windows-based programs that I really like are writelog
(www.contesting.com/writelog) which is excellent for contesting and dx4win
(www.dx4win.com) for general purpose logging (and casual contesting). Both
are well supported and have reasonably large user bases (judging from their
reflector traffic).

N6TR was recently specifically asked about plans for a Windows version
of his software. I can't claim to remember with 100% accuracy what Tree
said, but it was basically that a program with the reliability and
CW-sending ability of TRLog (and CT and NA) was not possible under
Windows - Windows' multitasking is simply not compatible with a realtime
application like TR.

I would also be worried about the reliability question. Windows 98
crashes for me roughly every other day at work. That would translate to
an average of one crash per contest. (probably more since I'm not at
the computer 24hr/day at work!) If it were to happen during a high-rate
run, it would have a serious impact on my score. Windows NT is
considerably more reliable (though you CAN crash it!) but because of its
architecture it's even less capable of handling some of the control
functions like CW keying and antenna switch control.

Linux suffers from the same problems with regard to CW sending and
antenna control. That said, I sure would like to see a decent Linux
general QSO logging program. (I know Linux loggers exist but IMHO none
are of much use for the truly active ham)

I've used the R6000 for about 9 months. When it rains the bandwidth, 2:1 VSWR points, tightens up only on 20 meters. The antenna is tuned for 14200 and remains at 14200, but the vswr increases from 1.3:1 at band edges to about 2:1 at band edges. On occassions I put 1KW into it with no signs of arcing etc.

The performance on 10 through 17 is flawless.

Deacon Dave, W1MCE

Lessee... from the site at www.k1ea.com:

CT Version 9 $79.95
Upgrade from CT 8 to CT 9 $44.95
CT Version 8 $69.95

So he charges $70 for OBSOLETE software that it costs almost another $50 to upgrade.

Free?

Yeah, NOT!

Jim,

It is seldom the OS that crashes, it is the application. I haven't seen a blue screen of death in years, but applications like Netscape do go south on me on a regular basis.

Doug,

Point taken. As for sending CW, no multitasking OS is going to be good at this. And as for reliability, I think we are to the point where NT and 98 exhibit reasonable reliability. I haven't seen a blue screen of death in a very long time. It is the applications that seem unreliable these days-- e.g., I can crash Netscape just about on demand. Probably an indication of the complexity of the OS, but not its reliability. Linux would definitely be the best bet, if someone would produce the application.

Doesn't CT8 run on some older hardware that 9 won't support?

It'd be nice if MS would offer older versions of their software - MS
Works 2.0 for DOS would be a perfectly useable application for a LOT of
people if only you could still get it, and it would save a lot of 286
machines from the dump.

I see them all the time (blue ones) and even a black/white one now and
then. Never have figured out the black and white one - "Windows
protection fault - you need to reboot your computer". Maybe it's a DX
cluster virus caused by too many spots, I dunno....

98 seems to be much more stable than 95, but I have a whole bunch of
stuff that's running all the time, so maybe I'm confusing Windows :-)
Friend of mine never crashes Windows - but he never runs more than one
application at a time either. When 98 gets a bad cases of the
crashitis, it seems like starting it in the SAFE mode fixes it for a
while.

Like Doug said, CW keying doesn't work too well in Windows either,
unless it's the only thing going. CT will run and do CW in a DOS
window, but don't try and check your email while you're calling CQ.

> applications that seem unreliable these days-- e.g., I can crash Netscape just about
> on demand. Probably an indication of the complexity of the OS, but not its
> reliability. Linux would definitely be the best bet, if someone would produce the
> application.

Of course, Linux would still have the multitasking problem with regard
to CW, and it would also share NT's aversion to allowing applications to
do funny things to the hardware. (I wonder if someone needs to develop
a pair of RS-232 controlled microcontroller devices, one for sending CW
and another for banging logic lines back & forth for antenna switches
etc., so that we continue to have options when the day comes that a DOS
prompt is no longer available? Though the open-source community is also
working on a GPL clone of DOS, which if fully successful would make that
a non-issue.)

My Win98 machine at home will not run for more than a week at a time
without reboots. (and it's not unusual for me to only actually *use*
the machine for a few minutes a week - the rest of the time it sits
there idle. There are times I've gone on a trip & found it BSOD'd when
I got home a week later.) It will occasionally refuse to run DOS apps
until I reboot. Admittedly it doesn't crash while in use very often.
The one at work does that<g>. (seriously, it will freeze solid from
time to time - sometimes for no apparent reason, sometimes because I
closed a rlogin session to one of the Unix servers upstairs)

I would suggest a complex OS is naturally unreliable. ("unreliable", by
comparison to a less complex OS.) That may be an acceptable
characteristic when it makes the OS and/or its applications
substantially easier to set up and use. It can also be a frustrating
characteristic when you have no problem setting up & using the apps the
old way<g>. I like having the choice.

I didn't work ARRL DX Phone this year (Mardi Gras took precedence)
but the comments here remind me of the 1993 event where I ran 50-watt
JAs on 10 meters with 100 watts and a vertical. That still stands out
as one of the best openings I've ever seen. I guess there's something
about March, when the flux is right, that leads to exceptional
openings over the central USA to Japan path on 10m.

WPX phone is in a couple of weeks, maybe it'll recur.

Telnet is NOT web-based. Telnet does NOT connect to the WWW. Web based means the cluster is accessible with a web browser and only a web browser. DX Telnet program is not a web browser and therefore cannot access any web based anything. Period.

Isn't your website on an FTP server? My point was that this gentleman is confusing the telnet cluster sites accessible with clients like DX Telnet with web based DX cluster site such as Summit DX. AFAIK there is only one web based DX spots source that is web based and requires a web browser to access it.

I also noticed that DX Summit went down during the ARRL SSB contest. The sysops did manage to get it back up on Sunday late morning, if I recall correctly. I imagine that the worldwide traffic to DX Summit during these contests must be quite signficant.

While I know that the original posting on this thread was about web-based clusters, there are indeed a number of telnet-based clusters available, as other posters have already mentioned. An excellent resource is:

http://www.cestro.com/pcluster/telnet.html

which lists dozens of US and foreign packet clusters available via telnet. You don't need "dxtelnet" to use them; any telnet client including the one supplied with MS Windows 9x works fine.

From what I see above you need a course in Good Manners 101.

Stuff your argumentative snide attitude and try a little bit
of civil helpfulness.

And thats the way it is!

Walter

When DX Summit croaked during the SSB contest I switched over to DXTelnet.
It worked very well for me. An excellent program, but an uncrippled version
will cost you $35.00.

>
>73 de Bob, KI8AB
>
>(all assuming I can find QSL routes - exchanges are too short to ask.)

OF COURSE "WE"`ll respond!!

We want your card as much as you want ours!!
Contests QSO is the shortest QSO. What`s happened? We have heard each other, say "Hello, I hear YoU :) (for ...) my QSO number (multiplier) is... Good luck" and what`s the problem?

All of my qsos are confirmed by QSL card, unfortunitely, most FROM MY SIDE ONLY :)))
and if we made a 5 qsos, you`ll get 5 QSL card!
QSL cards aren`t to expencive, so why don`t write `em?

For example, I`m looking for some callsign from some country. Ant there is a upcoming contest in that country. So... Let`s work and have fun!!

In the other hand, tehre is a good help named "internet". Great help is www.qrz.com where we can find almost all stations all over the "CQ zone" :)))

By myself, I`ll be very, very happy to work callsigns trough the contest and to get as much QSLs as it possible...

See you in contests and any Freq else....

Best regards, see you in YU DX contest!!

There are literally dozens of web based clusters. The DXTelnet program already has them set up in the menu and you just select the one you want to connect to. Any of the better logging programs then evaluate each spot to see if you need it and then alert you of the fact. The free DXTelnet must be restarted every 30 minutes. When you pay the fee, you get a password that eliminates the 30 minute timeout.

Nobody likes a smart ass...

I only do it because the speaker quality of the FT-100 isnt
the best when driving through city traffic. It is not a good
idea to use all your concentration in the radio when you are
driving., So I guess hooking it to the stereo system allows
you to use it station for entertainment while driving.

As to your remark

"quote" And you call yourself a HAM, HA! "unquote"

Dont start a fight, this is not the place, if you have nothing
constructive to say keep your damn mouth shut.....

Damien,

Have you met the famous Fractenna of rec.radio.amateur.antenna?

I think he uses mono headphones, but has perfected a way to get the surround effects of entire crowd of people listening to voices using minimal external electronics. The only thing you'd need to watch out for is an occasional shock if you use his method, unless isolation works.

Some famous author, I think it was Steven King or Dean Koontz, was taken by him and actually wrote him into one of his books.

Yeah, I noticed DX Summit disappeared during ARRL SSB. First thought it was just RF getting into my modem. (trying to run a laptop w/o RF filtering at a mountaintop site with short towers) But even when I could stay connected it wasn't there.

The local (RF-access) cluster died too. With the sysop on VP5 it didn't get fixed fast<g>. Actually we didn't miss it that much, it seems we (W4CAT M/2) were about the only people spotting anything!

I'm not familiar with the node software, but I suppose a contest like that is a real workout.

833. Why is SSB better for DX than FM?

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-11 00:00:00 UTC
From: fjx1@aol.comnospam
Message-ID: <20000311182714.02598.00001532@ng-fp1.aol.com>
Source record: 21567

Simple query. Why are cw and ssb better for DX than FM. I realize FM takes up more spectrum. In equal conditions how would they stack up against each other for DX. Also, where would AM fall, better or worse for DX?

Tks,

Think I know the answers(capture etc), but would prefer more expert reply, tks.

834. APPLICATION FOR AMATEUR RADIO LICENSE (FCC FORM 605"dd")

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-12 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <8aesc6$4ot$1@nnrp1.deja.com>
Source record: 21568

APPLICATION FOR AMATEUR RADIO LICENSE (FCC FORM 605"dd")

NOTE: FCC Form 605 will not be accepted after April 15, 2000. Please use forms with the "dd" ("dumbed down") suffix after that date.

Your name (or mark):
Your street (if unable to write, attach pictogram or map with red "X"):
Your city:
Your state (choose from drop down menu if testing on-line):

Are you in Florida or California ?

If you answer "yes" to the above, would you consider getting licensed in Canada or Mexico to reduce the FCC's callsign allocation burden for these two states ?

I am applying for (circle) :

No-code, quasi-Marine VHF ticket
General Radiotelephone Permit
Formerly "Extra Class", now "No Class"
Political Asylum at ARRL as a holder of a former UA or RA license
(please attach license or contester testimonials or your "character")

I have (circle all that apply):

Memorized all queries and answers
Paid for ARRL Life Membership in cash
Bought a new Voice only CB from YaKenComSu and found this form inside
Donated to WB6NOA's Publishing House
Bought off my W5YI Examiner
Amassed over 1500 Hours on the SETI screensaver

In case of electrocution from the 1500 watt amp you have will no knowledge of the workings of, give name of next of kin (not related by inbreeding):

Do you participate in any of the following ?

Web server hacking (attach references from N6NHG or FBI)
Bass fishin' Skeet shootin'
Yugo parts Swappin' Gremlin Refurbishin' Gas Passin'
Smokin' (Reefer, Cigarettes, Crack pipe ?) Microphonium Solderin'
Scanner listenin' Wire phreakin' Antron 99 Modifyin'
Monster Truck Rallies Weather Watchin'

Do you live in a :

Cadaverlac School bus Parents' Cellar Apartment VW
Beetle Van Mobile home "Big Rig" Duplex
Dunkin' Donuts (while open ?) Burger King (while open ?)

If you live in an apartment, why do you want a welfare incentive based
ham license ?

Can't afford college or technical school
Think generating TVI is cool harassment tool
Radios don't bitch like girls do
Want to play State Trooper when mobile

Does the value of your tower exceed the value of automobiles registered
in your name ?

Does the value of your CBs and scanner equipment exceed the value of
your present dormicile ?

Are you :
Married
Divorced (Once Twice Thrice)
Gay (please apply for "Satellite only" license)
Lesbian (please apply for "CW-contest-only" license)

NOTE: If you circled Thrice, please attach statement indicating you have
not participated in a SSB contest in the past 10 years)

Does your wife's hair present an electrical fire hazard ?
Does yours ?

Does your wife's hair present a hazard to Al Gore's campaign platform ?

Indeed? Well, seems to me when K1EA's OWN SITE shows what I presented it pretty much renders your claims discredited.

WHO was it you claimed above had a head like a brick? <chuckle>

> I just realized something, Neal. I
> don't know why we are discussing this, you've already said you are too
> cheap the buy the software, so no sense kicking a dead horse.

Not too cheap... I merely see no point in OVERpaying for something. If something is unreasonably OVERpriced I do not pay the asking price for it.

If I feel I really need it I find an alternate source... used, etc.

Like, apparently since the vast majority of contesters as you have said DO NOT purchase the program at full price from K1EA, all but a select few who apparently have so much money they need not concern themselves... money is apparently, to them, no object.

Bully for them, and you, if that is the case.

It does not happen to be the case for me. I have plenty of other places I would rather spend the excessive $40-50.

To work DX on six meters, you need three things: a radio, an antenna,
and lots of spare time. For details, take a look at:

Not as pathetic as the gloating of the no-code whiners as they ratchet down the standards of Amateur Radio into the cellar... and who will be the first to deny any responsibility when ham radio becomes the new millenium's CB slimepit.

I can't give you an exact answer, but intuitively, I would say that the
smaller your bandwidth you have, the more chance of DX you have. If you
have 100W and have to spread it over 12KHz (FM), it seems less efficient
than the 2KHz you need for SSB or even less for CW.

ATTENTION DXERS:

Just a "heads-up" that the DXpedition to Chesterfield Island is supposed to begin March 13. Although it presently counts as New Caledonia, (FK), according to the latest ARRL Board Of Directors Meeting Minutes of January 21-22 2000, (Summary Agenda #53)," the Chesterfield Islands DXCC qualifications issue has been sent to the DXAC for review." Hopefully, it may become a "new one" while the team is on the Island.

(New Subject). FYI, the Agenda also stated the following:

* "The status of Macao (XX9) is as of the meeting undetermined, as is East Timor. If China receives a callsign block from the ITU for use in Macao it will remain as a DXCC country.

* The DXCC Yearbook will not have a format Change"

Phil asked:
When operators operate using a split (listening up, etc.) what is the
normal distance?

Hi Phil
For SSB -- usually up 5kHz to 10kHz
Cw is less 2 to 3 kHz or so

For 40 meters, DX Windows, and where DXpeditions often operate -- see
URL:
http://www.ac6v.com/pagecall.html

For more information on split operations -- A MUST SEE IS AT URL:

For AM, the selective fading issue as well as heterodynes would certainly be a problem. Also, quoting from the Army's TM 11-685 Fundamentals of Single-Sideband Communication, dated January 1961, "On an equal output power basis (under ideal conditions) ssb outperforms am. by eight to one for an apparent system gain of 9db". Also, regarding antenna voltage, it says "..if the antenna for a certain type of vehicular or avionics application is limited to 400 watts PEP, an SSB transmitter having eight times the side-band power of an AM transmitter may be used. This is true because a 100-watt carrier, modulated by 50 watts of audio, also produces a pep of 400 watts". Another advantage for those who have antennas that cannot handle high power.

With FM, the manual mentions "Spectrum Conservation" and the fact that the s/n ratio is worse for FM under weak signal conditions.

Hope this answers your question. Personally I like the sound of 10M FM and enjoy working DX on it but it definitely would not work very well under pileup conditions.

I just THINK that qsl bureau is OK. However, you can send card for 4N1NB TO ME, I`ll find him! :)))) I think he/she is from Belgrade, near my town...
Almost all cards for 4N stations are vy ok by the buro...
LZ1SJ looks to me as an ordinary Bulgarian stn....

Good luck, It`ll be so nice to meet you on the air!

Use of foul language? The guy was an AH and I said so, that was the extent
of my "foul language."
What you are mad at is that I refused to talk to you on AOL IM because you
consistantly had nothing to say that would interest anyone and you
constantly TALKED about getting a license but never did a thing to get one
even though you are one of the most intelligent teens I have met. In other
words you talk the talk but do not walk the walk. I was also kicked off
being "anti-ham." Yes I should remember if you do not walk the company line
there is censorship. However I do recall a certain amount of agreement from
you and you even requested I be readmitted to that group. You will make the
perfect ham, talking out of both sides of your mouth.

Welcome to ham radio-set your watch back 40 years

Almost all ! Be careful with some 4N4 stations, they're located in
Bosnia-Herzegovina and by using 4N prefix they're making themselves useless.

From: Jan Lindstrom <declind@sympatico.ca>
Message-ID: <EShz4.39956$e53.1514841@news20.bellglobal.com>
Source record: 21598

Maybe a DXCC field checker can answer this one

After a few years letting my logbooks gather dust I decided to update my dxcc lists and enter them in a logging program(LOGGER) . Many of the old soviet union districts have now changed and the prefixes are quite different.

? Do they still count for the actual area that they are in or do I have to rework these areas. IE. UQ1 was Latvia and now is some ?____istan. Do I still have LATVIA confirmed?

? I know what deleted countries are but I don't see these mentioned in the rules. Did some of these just disappear without reappearing in the so called new countries. I know my old East Germany cards are still good for deleted. ?

? In calculating honour roll status is the minimum # of countries based on current only?

Thanks

Questions have been answered thanks to ARRL site list. Tip from AA5XE. Thanks DALE !
1+2) Prefix cross-reference list gives dates for changes on prefixes.
3) Honor roll list is on current entities(323 minimum of 332 possible) not including today's announcement for East Timor.

Your question prompted me to get out my copy of the "DXCC Award Credits Listing". You may wish to request a copy of this from the ARRL as it spells out what is counted for DXCC fairly clearly. It also includes the list of deleted countries (which I believe do not count for honor roll but do count for total countries). As far as I can tell, there is only one deleted soviet country: UN1 Karelo-Finnish Republic. The other Russian countries that are good are listed as follows: UA Euro-Russia; UA2 Kaliningrad; UA9,0; Asiatic Russia; UJ Uzbekistan; UN Kazakhstan; UT Ukraine. New countries are: EK Armenia; ER Moldova; ES Estonia; EU,EW Belarus; EX Kirghizia; EY Tadzhikistan; EZ Turkmenistan; LY Lithuania; YL Latvia. (I may have missed a couple, so best to get the list). Your question about whether a card from let's say Belarus, worked before their independence, counts as the new EW, is a good question. I'd like to know for sure, too. Based on my scorecard from the ARRL, it looks as though they accepted the old card for the new country credit. Please let me know what you discover. 73, John, K7JY.

Burt sounds like this other self appointed ham radio god in my area.

Check out this sound file of him on the air, and his picture on a
magazine.

http://www.pittnet.com/claude/hamradio/NPX1.jpg
http://www.pittnet.com/claude/hamradio/ABufu.zip

These are well worth checking out. Prepare to laugh.

Your best bet is to obtain a copy of the latest DXCC Countries List booklet. It will answer all of your questions. The ARRL Web page can also be checked. Look under DXCC Rules/Regulations as well as DXCC Countries Listing. Good Luck. 73 Murray, K3BEQ

> being on small budget too well.
>
> Regards,
> Jim - KU5S

I spend what I have on my hardware because I have to. And I try and spend as little as I can and still have what I want (pretty much... I would prefer of course to have an IC-756, a no tune 160-10 Alpha, etc etc etc but that is WAY down the road).

To pay $80 for a single software program I will only use maybe 10 days a year, well, that to me is ridiculous... especially when there is so much else available for free or at a reasonable price ($29.99 or less).

No, I am not a cheapskate... I am not a miser... but I am not a spendthrift either... I tend towards frugality in my hobbies so I can spend more on what my family NEEDS.

Just the kind of guy I am I guess.. 9-}

Well I get good results with a modest station up here in the mountains of
Arizona in a small town called Prescott. Lots of photos of Prescott and myself
and station on my website. Elevation here is over a mile-high and I am sure
that helps with working DX. I have over 250 DXCC on a dipole. Drop by the
site and check it out.

Greetings,

OK, your points are well taken and respected.

> To pay $80 for a single software program I will only use maybe 10 days a year, [snip]

So that's 'maybe' $8 a day. Did not some fellows write post contest prepration of the logs takes them a day or more.

Don't know about you, but I've worked more than one day for less than $8 and would rather not. :) Of course we don't always have the luxury of a choice.

It's all in how you look at things, isn't it? Would it be better to spend the $8 and use the time saved to spend with the family or some other worthy activity? :-)

Regards,
Jim, KU5S

I've watching the comments fly here on this subject, here's my observations.

Well, hams ARE cheapskates - is this news? I've been distributing my freeware logging program for years (www.xmlog.com) and have had more than 25,000 downloads. There's a note on the web page that voluntary donations are appreciated. Want to guess how many people have sent donations? (Here's a hint, the answer is two). I'm not upset, it just goes to show that people trolling the net for software have gotten used to getting it for nothing.

But at the same time, if there's something there that's uniquely valuable most folk don't mind paying for it. I've got copies of both CT and WriteLog that I use for contesting here. The free loggers just don't provide the features and flexibility that these programs deliver. I guess the bottom line is simple, if you don't think it's worth the money - don't buy it!

And by the way I've been getting my CT updates free since I originally registered version 8.

Hi Ted -- since 6M DX is primarily dependent on sky wave propagation I suspect location (San Diego) is not a factor. I just got on 6M and worked Hawaii, Canada, and New England. Have heard but couldn't get thru to Southern Mexico, Australia, New Zealand. Old timers tell me when the SFI gets up in the high 200's -- a window to Europe is to be expected. In addition to sky wave, ducting and sporadic E has produced closer in DX.

In the last two weeks, our packet cluster has had 6M spots for Australia, New Zealand, Brazil, Argentina, and VP6BR who is on Pitcairn Island.

I run 100 watts and a ringo half wave vertical.

One can tune 6M for days and not hear much, so I recommend using a packet cluster and leave the 6M rig on and tuned to the DX calling frequencies.

GD DX on 6M

906. Re: East Timor [4W] added to DXCC !

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-17 00:00:00 UTC
From: Dave Goodwin <ve2zp@rac.ca>
Message-ID: <i1iA4.191352$B6.1411433@quark.idirect.com>
Source record: 21637

From the RSGB bulletin for this coming Sunday 19 March, as reported on the RSGB website www.rsgb.org/news/gb2rs.htm

"East Timor becomes new DXCC entity

"The International Telecommunications Union has communicated to the United Nations the assignment of the prefix block 4WA-4WZ for use by radio stations within the areas administered by UNTAET, the United Nations' Temporary Administration of East Timor. This prefix assignment is for the use of UNTAET as long as it exists, and will be released to the ITU at the end of its existence.
All other private and amateur radio stations in East Timor will use the prefix 4W6. Individuals who expect to be there less than one year would use 4W6/ home call, while those who will be there in excess of one year may obtain 4W6 callsigns. Permanent residents of East Timor who were previously licensed may also obtain permanent callsigns."

Yes, 4W used to be North Yemen. When North Yemen and South Yemen united to form Yemen several years ago, the new country must have relinquished the 4WA-4WZ block, leaving the ITU free to reallocatw it.

For sale in excellant condition. Just in time for those sun-spots!

http://www.durhamradio.com/alinco-drm06th.htm
(for a photo)

23 watts out (checked)
Great radio but have found a HF that I want and I am upgrading.
Lists for around 250.00
Will sell for 175.00. I have the box, books and even the bags!
Could pass for new.
Also this radio has the mods installed.
45 - 60 Mhz TX
40 - 60 Mhz RX

Non-smoker!

I'll even ship it free for you.

Lee

Irrelevant, since there is, as I have said, free or reasonably priced software to do basically the same thing.

> Don't know about you, but I've worked more than one day for less than $8 and
> would rather not. :) Of course we don't always have the luxury of a choice.

Point is, CT is NOT the only choice available.

> It's all in how you look at things, isn't it? Would it be better to spend
> the $8 and use the time saved to spend with the family or some other worthy
> activity? :-)

I don't waste my time manually doing the logging or log prep. I am merely pointing out that I do not buy CT to do so because it is so ridiculously overpriced.

It would cost you days and hundreds of dollars to make a pencil yourself, true? So, if someone tried to sell you a pencil already made for $50, that would be quite a bargain, wouldn't it?

Or would it?

Your argument is incredibly flawed under the circumstances, Jim. You really should re-evaluate it.

Well, surely you realize with 25,000 dloads your efforts are appreciated.

And if you do not ask for payment, surely it should not surprise you that little arrives.

> But at the same time, if there's something there that's uniquely valuable most

And from the looks of sales of CT (or rather non-sales of CT) the populace does as you suggest.

> And by the way I've been getting my CT updates free since I originally
> registered version 8.

Then explain why K1EA's OWN WEBSITE lists almost $50 to upgrade, will you please?

Just a ripoff for suckers?

And why, then, would anyone pay $80 for CT 9 when they could just pay for CT 8 and get the free upgrades, hmmmmm?

Just curious.

Source record: 21648

I'm happy to report that Chip (the ol' man himself) will be on this weekend on 10M with the Fractal Quad Yagi, working Europeans. He will be on about 1300 UTC somewhere in or near about 28490 to 28500 KHz. He will try (but no promises) to get on both days of the weekend so take a listen to see how that lil' fractal antenna plays! Usually he stays on an hour or so.

Background info can be found on the ham page on

http://www.fractenna.com

Chip's fractal antenna work has appeared in RadCom, Practical Wireless, World Radio News, 73, Communications Quarterly, Radio Revisita, Monitoring Times, QTC, Scientific American, Discover, Science et Vie, and many other magazines.

Hear and work the latest innovation to the world of antennas from Chip himself:-)

I'm a High School student, reading the book ALIVE by Piers Paul Read. In that book, hams helped with rescue operations from the Fairchild No. 571 of the Uruguain Air Force. - Oct 13, 1972.
I'm looking to contact any ham operators who helped with these rescue efforts. Can anyone suggest how I could find them?? Unfortunately, their callsigns aren't mentioned in the book. One ham's name was Rafael Ponce de Leon.

Now this is the problem with the demented religious right, no concept of reality. The problem with Dave is that he is so confused about real religion, he can't see the truth in front of him without a bible in hand. You really have to worry about an individual with so much distorted truths, he can't understand anything other than Bible thumping bullshit! The problem with you Dave, is you just don't know shit! plain and simple, NOTHING! Passen Sie gut auf! aufpassen Du tust mir leid. Mit Ihnen bin ich fertig!

hi there,

for me it's impossible to make a QSO with the Stations from StateSide
because my working condition very poor -a President LINCOLN with 30Watts out
but a very bad antenna...my longest distant QSO was Spain : (
i can copy many Signals from Dallas to Philadelphia down to New Orleans on
27MHz - AM there are a lot of Mobiles, and no joke the Signals between
3p.m. -8p.m. are 5/9+20-30db!!! What are the working conditions from your
side ? What is legal ?
Okay best regards from the westside of Berlin called SPANDAU ...

!!!sorry for my English!!!

> side ? What is legal ?

The stations you're hearing are probably not legal. 4 watts transmitter output on AM, 12 watts PEP on SSB, are the legal limits in the USA. However, many stations violate these limits. (the highest power the government has ever caught anyone using was 25,000 watts, but most are using a lot less!) Also, it is technically illegal for an American CB station to communicate with another station more than 150 miles (about 250km) distant. There is a theoretical height limit for CB antennas (6m above a building, or 18m above ground) but I don't know of any CB stations that come close to violating that limit.

American police probably won't bother you for running more than 4 watts or talking to Europe, unless your transmissions are causing interference to other services. (like TVs and telephones) Selling high-powered amplifiers to CBers, however, may get you in serious trouble.

All that said, it certainly is possible for a legal 4-watt station to get across the Atlantic with a pretty good signal. I have legally communicated with dozens of low-power (less than 5 watts) European and Asian stations on the nearby 28MHz ham radio band.

Amateur Radio is not "cb" -- not just buying a factory-made, plug-and-play station and pushing the mic key, shouting, "CQ CQ!" While currently in the United States there exists a trend to make entry and upgrade to Amateur Radio privileges easier, there is something this hobby represents that is true for any amateur radio operator, in whatever country s/he resides. We represent our respective countries. We are ambassadors. When I talk with a Ukrainian Amateur, I actually come away thinking, "So that is how they act over there. That's what that country is like."

Amateur Radio to me is an art. The art of communication, the art of language, the art of electronics, propagation, etc. Perhaps that is why CW is so attractive to some people, RTTY to others, and why DXing is so hot to many others. It is more than just making quick contacts and feeling like you did something grand because your 1500 watts made it 3000 miles.

We Amateur Radio Operators are making connections. The human touch. Perhaps making peace and improving the human condition. Could it really be possible?

All of us are part of a large family. This hobby allows us to use technology in a pleasurable way to "reach out and touch someone" (remember that advert?) and make connection. CW is a mode, one of many. I take great pleasure in it. It inhances the experience of communicating. Sexy, some might think of it.

If we wish to encourage the long life and health of cw, or of any mode, perhaps we should nurture the sizzle. This has been said, and said again. We lead by example and through embracing those who choose this form of communication. The result is that more of us humans are connecting, forming a closer family around the world. No skin color. No accent. No gender. Pure exchange of thoughts and the sharing of common experiences.

I am a single dad, with two sons (11.5 and 13) -- and my life's work is to nurture them into leaders -- men who know the "real deal" and lead by example. Ham Radio is just a channel that allows society to communicate. What we communicate and how is an extension of who we are and what we believe. So my hope is that my boys, and I, exemplify a high standard that impacts the world of humankind with something of value.

Life is simple. Really, it is. And Amateur Radio is not God's gift to the world. But it is a very valuable pursuit. The foundation of this hobby is made in part of the value of life and the respect of each other. Modes of operation in Ham Radio is really insignificant. What we do through these modes is more at issue. CB became the mess it is because those with virtue left it to the lowest common denominator.

I hope to spark the kindling in other's minds. To tempt the non-amateur with the magic and sizzle of crossing boundries and issues, and connect. Be it with dit-dahs or with long-winded chatter.

(remember to change my email address when replying direct)

954. QSL Manager Needed

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-21 00:00:00 UTC
From: martek <martek@internet-zahav.net>
Message-ID: <01bf937c$973f5080$429a75c0@mark>
Source record: 21488

Help! My current qsl manager is no longer able to manage

my cards. I need an experienced manager who can accept logs

by email in spreadsheet format (.wk4 or something else). I

send logs every 2 - 4 weeks by email. I have a fairly busy

station in Jerusalem, Israel...about 2000 qso's per year

unless I get motivated during the Holyland Contest, and then

the qso count goes up to about 2500 to 3000. My qsl manager

only sends cards out in response to cards received, unless I

indicate that a card should be sent due to rare dx or

whatever.

Please contact me asap if you would like to manage my cards.

Thanks,

Mark Rosenberg 4X1KS (also KU4M)
Jerusalem, Israel

WTB 1KW Output Amplifier

Looking for a GOOD amplifier in the 1KW output class and in the
$450 price range. Also considering the Alpha 374 (3 tube).
Please send a description of what you have available, condition,
model, location, etc. Can pick it up in Arizona, Las Vegas, San
Diego, etc. I am amp-less and ready to buy.

ASC2ADIF is a program for converting logs in various formats to ADIF format so they can be imported into some of the newer logging programs. Requires that the user have MS Excel or a spread sheet program that will save data in .CSV (comma delimited text format). Includes documentation on how to convert data files.

SCAN920 is a control program for the Yaesu FT-920, which allows scanning of memory frequencies and easy storage of frequencies into memory, and provides most of the CAT control functions for the FT-920.

Both programs are freeware. More information at:

http://kh2d.net - click SOFTWARE from the main page.

Worked C34SD on 19 March 2000 at 2116 UTC. He was on 21.217. Have looked on all the callsign servers and QSL manager sites I can find - and I can not find a thing. Even the Andorra bureau server does not show the callsign. There is a C31SD, that is as close as it gets. Did I write the callsign down wrong or was he maybe a pirate. Hope someone else worked him at the same time and can confirm that I did not imagine it.

You probably have it correct. There are many Andorra stations now signing
C34, C35 and C36 that I have worked. It is some special event that allows
them to use these callsigns. I suspect they are C31 calls with higher numbers.

Hello Sam,

The Andoran Radioamateur Union (URA) issued special calls and prefixes
for their 20th anniversary award. The special prefixes are :

C34, C35, C36

Special calls are :

C37URA and C37RC.

Special calls and prefixes are only active in March 2000

I guess that Andorran amateurs using C34, C35 and C36 prefixes are the
C31 they usualy handle. So I think that C34SD stands for C31SD.

Hope this helps

73,
Philippe

Philippe is correct. These are special calls being used for the award. I worked 2 of the special calls while I was MM/W3LEO in Scotland recently: C36HK & C34US. Fred, C36HK, described the special event and what was needed to get the free certificate. Don't remember the details but these are all C31's with the special prefixes. Award details probably on Andoran Radioamateur Union (URA)web page.

Cheers

Leo - W3LEO

P.S. It is unfortunate that operation under CEPT in the U.K. requires the use of the "M" series of prefixes. So, my call in Scotland was "MM/W3LEO" -- not GM and no number after the prefix. Boy, did that ever cause confusion, especially in the ARRL contest. Some insisted I needed a number, some thought I was Maritime Mobile, some didn't know what or where I was, HI.

====================================

INTERNATIONAL POLICE ASSOCIATION RADIO CLUB
DUTCH CLUBSTATION * P I 4 I P A *
================================
19-03-2000

Hello radiohams/shortwave listeners, as promised, but earlier than I thought
myself, I am here again with info about the International Police Association
Club, Dutch section.

I have made a start on 14.165 MHz. I must say that was not wrong! But I find
out and still till now there are problems with my station "PI4IPA" because
on 14.165 MHz in the time that I have my program on tuesday there are so
many
Russian stations and a lot of them are verry strong that I can't hardly work
on this place of the band. Sometimes yes, sometimes no!

The last time I have heard that the IPARC has special frequencys, so I will
change the frequency of 14.165 MHz into 14.240 MHz. Be so kind to tell this
to the hams in your surroundings. Thanks in advance!

So once again the real information

RESUME:
every tuesday afternoon: PI4IPA For the crew of PI4IPA
time : 14.00 UTC MARCEL PA3GGW
frequency : 14.240 MHz PA3GGW@PI8SHB.#NBO.NLD.EU

Changing starts on 04-04-2000

You are way off base. NOTHING worth while is free so stop your crabbing. If you want good, funtional well written software you have to pay the price maybe a 100 bucks for something like dxbase 2000. If you want junk, poorly written software, not user friendly, not intuitive only spend 20 or 30 dollars. Better yet save all your money and keep a PAPER LOG or write your own software, after all when smoking was the in thing to do, last generation, lots of people rolled their own.

Maybe you should have a conversation with a software author and see what it takes to write some of these programs then make your judgement about it's value.

984. New Active Portal on Arts - Radio - Shortwave

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-25 00:00:00 UTC
From: reporter@active-portal.com
Message-ID: <20000325033253.9044.qmail@ftp2.hostme.com>
Source record: 21368
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.dx

We have developed a new Active Portal web page on

Arts - Radio - Shortwave

It has links to hundreds of pages. Please check it out! Thanks.

The address is:

http://www.active-portal.com/cgi-bin/genpage?cat=1042156

This page has been developed as part of the Active Portal
Project in the Computer Science Department at the University of
Wisconsin, an ongoing research project.

An active portal is a page devoted to a particular topic
but with a difference.

The active portal is seeded with a number of a pages known
to be about a topic. A search agent then learns the
characteristics of those pages and then seeks out similar pages.
This search agent runs automatically and continuously. Thus the
active portal, unlike manually-compiled portals like Yahoo,
continually discovers new pages about a topic. In addition,
it ranks a page based on a combined measure of its popularity
and content level.

The active portal also features a sign-up box for a mailing
list that is used to alert its members to new pages that the
search agent discovers.

Please feel free to reply to this message with any comments.

Best regards,

Matt Zeidenberg
University of Wisconsin
Computer Science Dept.

985. 10 is still hot!

Friday evening at about sunset California 10 meters was hot. I contacted about ten Japanese hams and an LU#xx (Argentina). Actually one of the harder contacts I did was someone located ten miles away!

There's a contest going on. I don't compete, but contests provide a steady supply of hams to contact as I scan up and down the band.

Everyone was giving me numbers of the form "59###", so I "faked it" and gave out "59001" to "59013". Think the 59 is the signal report, and the next three digits refer to what contact number you are in the contest. Gave a Japanese ham "59 double Oh 7" and he appreciated the reference to James Bond.

RAC offers the CANADAWARD for working all provinces and territories on a single band or a 5-band version as well as the Provincial Capitals award. They have others as well. Also, there are also the WAVE and WACAN awards from another organization. If you check the RAC awards web page at http://www.rac.ca/techno.htm#Awards you will find detailed information.

From: ME <NO_MORE_TELEMARKETERS@PLEASE.COM>
Message-ID: <38DD8FAB.76BA1A6F@PLEASE.COM>
Source record: 21381

Help Stop Unsolicited Telemarketing Calls

I lose count of how many times every day I receive another phone call from Telemarketers. If it's not a person on the other end, it's a dead line or silence.

Likely you've received MANY calls that are a dead line. These calls come from Telemarketers using Predictive Dialers. A Predictive Dialer, dials numbers in advance, expecting the next Telemarketer to be free to pick up the call.

If the Telemarketer is free, you get to talk to someone pushing a product or service you don't want and many times won't take no for an answer. However, if no one is free in the Telemarketing group to take the call, in California, state law says they can't play a recording, so you get a dead line. If you go to YAHOO or any other search engine and search the words, "predictive dialer", you'll see that lots of companies make this equipment.

WHAT YOU CAN DO ABOUT IT:

There is a group in California trying to put a petition on the November 2000 Ballot. However, they lack the funds to hire people to gather the 420,000 signatures required.

You can help by going to their WEB Page, printing the petition, signing it, and mailing it to them. (In order to be legal, the petition must be printed on 1 sheet of paper.)

You can also help by passing this email to others in California, ask them to sign the petition, and pass this email on to others. (Do NOT send this email to anyone outside of California, their signature is NOT valid on a California petition.)

You will find information about this petition and the group promoting it at the links below:

http://www.stopjunkcalls.com/teleprop.htm

http://www.channel2000.com/news/specialassign/news-specialassignment-990219-220839.html

http://www.zdnet.com/intweek/stories/news/0,4164,2445306,00.html

http://www.voterrevolt.org/

Actually you might have a harder time working a VE8 now that NWT split up. VYï¿½'s are around - in fact VYï¿½AA is in the WPX contest this weekend. During the summer, you will find VYï¿½TA (ex. VE8TA) on from Iqualit. But you are right, the awards are not as easy as you might think. 14MHz for all provinces was tough - especially the maritime provinces for me as they are rather close to Long Island for optimal skip.

A good time to look for alot of Canadian activity is during the RAC Winter Contest in December and the RAC Canada Day contest on July 1st. However, they have a habit of working phone in segments of the bands not open to US hams (ie. 7050-7100, 14100-14150, 21150-21200) so it can be difficult to score.

From: Larry Gauthier <larryg_AT_ismi.net>
Message-ID: <38de19fa@news.ismi.net>
Source record: 21387

Bill:

The 10-10 International organization was formed many years ago (about 35) to create greater interest in Ten Meters - due to the fact that low sunspot cycles decimated the band and no one was using it, and that a portion of the band had been "carved out" by the FCC to create the Citizens Band (CB). The fear was that if hams did not use 10 more we would lose even more of the spectrum.

Members exchange 10-10 numbers for awards, and there are individual chapters (Springbok, ... many others) of 10-10 clubs that assign chapter numbers and those are also exchanged. There are also a few 10-10 contests each year, in both CW, RTTY, and SSB modes... and obviously only on 10 meters!

You can visit the web site at: http://listserv.lehigh.edu/lists/tenten-l/
To become a member, you must first contact and collect 10 10-10 members' numbers. That should not be too difficult, since 10 is in great shape. There are a few nets, and if you hang around 28.425 or 28.380 you should be able to work ten members in an afternoon with no trouble. If CW is your thing, there is a net that meet at 28.1010 weekly, but I have checked in there and it is not real active - so getting 10 numbers via CW will be a tad more difficult than an afternoon's effort.

I believe they are assigning membership numbers in the 700,000 range these days.

The most resent QSL info I have seen is via YT1AD. But as you correctly have observed ,there seems to be many options. My personal experience with QSL from 3V8BB is rather disappointing. After having QSO with that station on 40, 30,20,17 an 10 M over a period
from 1995 till 2000, I have so far NOT been able to receive a QSL for any of those contacts. I have closely observed and sent QSL via
the appropriate QSL manager for the periods in question, including YT1AD, but so far without any response.

They probably appreciated the points you gave them during the contests, but obviously lack the ham spirit in meeting your requests for QSL.
My conclusion is that I will not waste time and effort to QSO 3V8BB in any contest they may participate and perhaps you should do the same.
Save your QSL, stamps and money , there are other stations operating from 3V8.

When I worked 3V8BB in 1999 YT1AD was the operator and I received 2
cards via direct. but 3V8BB is a club station and you need to know who
the operator is to QSL. The info might come up after the contest is
over.

From what I know 3V8BB is a club station and has many guest operators at varying times. You need to know who was operating the station at the time you worked, it then QSL to the OPERATOR not the station. I have also found the 425dx net is an excellent source for tracking who operated 3v8bb and over what time period. Go to www.425dxn.org and use there search engine in their archives to find references to 3V8BB.
Good luck and don't loose faith in qsling. I have tried every(direct with IRC, direct with $$, direct with return postage and Bureau) and I am not sure what is best. On 101 countries confirmed in 13 months my hit rate is about 67%. It would be nice to know how that stacks up with other experiences.

Hi guys!

In this contest it was YT1AD, a lot of QSO, I think.
If I can help you... Tell me your time, band etc and wait a little...
As soon as it possible I`ll help you (First time I meet YT1AD, usually abt
40km from my QTH...)

Hmmmm, maybe on your side but here was quite an opposite story.

I was working EU and USA (longpath) on 10m until 3.30 in the morning (local time here) and 15m lasted another 30-40 minutes. By the time 20m "went to bed" at 6am the 10m band was open wide to USA. You couldn't wish anything better.

Yes, most likely it was C31SD.

You're lucky to be non-european station so you could work him. I was chasing that guy for about three years from Germany (I was DL4FMA) on 80m. Every weekend he would appear on 80 m around (local) midnight and work north america for hours. Sometimes he would call for 20 minutes with no reply but never wanted to work Euro's. Even if someone jumps in with:" ..BG .. for new one ... " he would say 'Stand by Europe' And so on for looong three years. After that he probably heard that there are some other bands and I had to move to Australia. I even worked SV/A and R1MVI and all other Euro's but never Andorra. If someone finds him working some EUs on 80 let me know, I may use all my savings to come back to DL and work it, hi

ZS31ER IOTA DX-PEDITION TO ELEPHANT ROCK ISLAND 31 MARCH TO 8 APRIL 2000

A new IOTA Island Group on the West Coast of South Africa is being
activated on the above dates. The island group number will be allocated
by the IOTA Committee after 50 contacts in 5 countries and will be given
by ZS31ER over the air.

We will be running two stations using maximum legal power into 3 element
tri-band yagi antennas. One station will run 400 watts on SSB and the
other will run 150 watts on CW on the usual IOTA frequencies.

When propagation is suitable we will also operate on 40 and 80 metres and
possibly on the WARC bands using a G5RV and dipole antennas .

TEAM MEMBERS

ZS1FJ Barry Fletcher (Team Leader)
ZS1RON Ron Marlow
ZS5BBO Edwin Musto
ZS1B Bud Voortman
ZS1GRM Gerald Meneses
ZS1MAL Mal de Beer

QSL INFORMATION

Barry Fletcher ZS1FJ will be the QSL manager. All QSLs must be sent
direct,
or via the bureau to ZS1FJ. Address : 18 Valley Road, Kenilworth, 7700,
Republic of South Africa.

INFORMATION ABOUT ELEPHANT'S ROCK ISLAND

Elephant's Rock is located up the West Coast about 25 km West of Vredendal, and 4 miles North of the Olifants River Mouth (Elephant's River) which is about 450 km North of Cape Town. The island is about 100 to 150 metres long and about 50 to 75 metres wide, with the highest point about 50 ft above sea level. It lies 250 metres off shore. It used to be called Morrel's Rock many years ago and is also known as Robeiland (Seal Island) by the local inhabitants and is located near De Punt Mine. They suck up alluvial diamonds with large boats operating out of the river mouth.

The co-ordinates are 31 deg 36 min S and 18 deg 11 min E.

It is a Nature Reserve, and ZS1FJ has obtained the necessary permit. It has plenty of seals and bird's nests and is a very malodorous environment. Your nose gets used to it within 10 minutes ! They say the sea never breaks
over the highest point which is 70 feet above sea level on the prevailing weather side of the island (West side). Planned "shacks" will be on the East side.

OPERATING FREQUENCIES (MHZ) .....(Normal IOTA Frequencies)

SSB 28.460 (Alt 28.560) CW 28.040
24.950 24.920
21.260 21.040
18.128 18.098
14.260 (Main IOTA frequency) 14.040
(NIL) 10.115
7.055 ** 7.040 *
3.755 3.530

* No specific IOTA CW frequency is allocated on 40 metres, but a frequency above 7.025 allows for USA contacts when the band is open to N. America.

** On 2 April between 05h00 and 08h00 UTC we will look out for VK / ZL and Pacific stations and also for South African stations on 80 and 40 and 30 metres.

From: arronenglish <aenglish15@hotmail.com>
Message-ID: <38dffe23$1_1@127.0.0.1>
Source record: 21507

I was licensed as a Tech prior to 1987 and will re-enter the amateur radio service after 4/15/00.
I have been listening on various HF bands for the past few weeks and today found what appears to be a "DX net" on 14.247. I listened for 10-15 minutes, beginning at 22:50 UTC (on Monday, 3/27/00).
Can anyone tell me how often this net meets, and at what time it begins? Any additional information would be much appreciated.
TIA,
Dennis (ex-WA6DDC), now in Colorado.

What you discovered one was of the "Lists" nets (so-called becuz
"Net-Control" sets up lists of folks to "make calls" to DX stations.)

I admit to using the net once or twice, but there are concerns you should be
aware of (or will quickly discover yourself.)

The "Net-Control" can be a bit in "over-control." I sometimes got the
feeling that if you were not an old-boy regular, you were not welcome and
your call would not be acknowledged.

Also, there is currently an ongoing issue regarding the legality of folks
"dropping" just the last 2 letters of their calls.

Overall, I have found better ways to work DX. I have found 17 and 12 meters
much friendlier during regualr contacts, and you can always pick up a few
"new ones" in the big contests (without working more than a few hours...this
past weekend's WPX was a good example.)

Just my 2 cents.

You don't even need a beam. (Well, depends on where one is in the
world I guess.) I bagged 'em on 15 CW on my very first call...with
400 watts to a vertical. And there was quite a pile at the time.

It's experiences like this which make DXing fun.

There is an excellent dissertation on "List Lizards" at:

http://www.qsl.net/kh2d/lizard/lizard1.html

Whether you believe that Listing is a good way to work DX or not, the
author's writing style and descriptions of the "list lizard" animal are
hilarious, and should be required reading for all DX enthusiasts! ;-)

There is absolutely nothing wrong with the dx nets. They are a great way to enjoy dx. The ones with something wrong are the moronic idiots jealous of the good and legal contacts on the net that jam them continously. So jealous that a kid with a vertical and a 100 watts gets darn near the same report that the lid does with a Henry 8k, FT1000D and a beam on a huge tower. The jammers that do not like the dx nets need to spin their VFO and and get a DAMN LIFE!

That's a mighty big opinion there, mighty joe. Sounds like somebody's
been pluggin' your ears while you are trying to get your 2x2 signal
report..... RealHams can copy right thru a little QRM.

There's a whole lot wrong with DX nets. But since you seem to be an
avid consumer, no sense in explaining what's wrong with them to you.

Hi,

They seem to be working UK on 10, 15 and 20 fine - when they can hear us!

I think the propagation is a bit wierd - a good RX signal here does not
necessarily mean a good RX signal there??!!

Cheers, Bill.

Seems to me DX nets provide a gentlemanly approach to working DX. As opposed to the traditional approach, where 1000 mindless idiots scream their callsign continuously, like a flock of baby birds yelling to be fed. I have heard DX operators get fed up with the din and resort to list taking.

It's a hobby, not a religion.

73,

Marv

Yeah, when I heard them on 15 phone (didn't call them, they were
going by call areas and I didn't feel like waiting), they kept
insisting on "USA only".

Both times I've heard them on CW, though, they were working all
callers, very efficiently at that.

I agree! I have worked some very nice dx on the different nets, but you miss out a lot on pileup dx compared to nets such as --
-- Hams who never stop calling to listen for the dx station to reply.
-- Hams who obviously can not hear the dx station but decide to get on the frequency and call forever because they saw a dx spot and just maybe the dx would somehow hear them and send them a qsl card.
-- Hams who don't know their own callsign. The dx will ask for station with xyz in their call and a bunch of idiots who do not even have one of those letters in their call keep hollering.
-- Hams who give their name and a signal report in a pileup every time the dx station goes qrz without even hearing their own callsign first.
-- Hams who don't even know what call area is in their callsign! Yes this happens a lot when a dx station asks for a particular call area number.
-- Hams who don't even know what continent they are on!!
-- Hams who like to play "frequency cops" on the the listening frequency of a split operation. They NEVER id and like to get into verbal fights with hams who do not realize right away that it is a split operation. They also tend to like to ragchew with other "frequency cops" on top of the dx frequency.
-- Hams who want to give a detailed account ot the weather to a very rare dx station in a huge pileup.
-- Hams who never stop calling for at least an hour or so. This is one of my favorites. It usually is apparent after a dx station goes QRT and I go out to eat or so and come back and realize that my rig is still on to a dx frequency and hams ars STILL calling for him.

I wish they would do more on 17M phone. I've got them 10-20 except there.
According to the cluster search results I have gotten they have done the least
on 17M phone.

Your smoking dope, right?

There are many good radios out there, but few can compare to The President G
eorge.

>>>I have a President James, and while I agree that they are a good radio, t
he George doesn't work ALL that well with a linear, and I have heard better
AM transmit. However, for SSB, it is a damn fine radio.

This gem of a radio boasts many features not found on other, lesser radios s
uch as:

>>>All around, about the same as any Galaxy!

* Internal, user- definable security code. Should someone be foolish enough
to steal the unit, it will be inoperable unless the code is re- entered.

>>>Which can be broken with the hack available on the internet.... Useless
gimmick.

* Sixteen channel memory. Stores your favorite frequency AND mode of operat
ion. Jump to your favorite channel with the push of a button!

>>>Not quite that easy, but functional.

* Three ways to change channels. From the rotary knob, using the push butto
ns on the radio, or from the microphone!

>>>Yes, you can reach down and change the channels with the buttons on the r
adio, or the knob.. Never figured out why President included both.. Maybe
to fill space on an already cluttered faceplate?

>>>And you lose that FANTASTIC functionality when you replace the mic with a
D-104.. The stock mics they supply suck quite a bit of ass.

* Full frequency coverage from 26.105 through 28.805, including all 'A' chan
nels.

>>>My Galaxy does better.

* AM, FM, and SSB modes

>>>Which is standard on nearly any export.

* Full complement of front panel controls including variable RF power and op
en clarifier.

>>>Yes, you too can have the variable carrier, so everytime you go get back
in the car, you have to reset up your entire station, wondering if that stup

id carrier control was moved by junior when he was fidgeting... 'Cause you know the George can deadkey 30 watts, and that would DESTROY almost any amp out their.

* Full internal metering RX/TX, SWR, Modulation

>>>Modulation meters are useless... What other radio doesn't have a RX/TX m eter. SWR meters are useless on a radio.

* Dual- color background lighting for the Liquid crystal Display. No LED's to burn out!

>>>Tell that to all the fine people who purchased Emporers and live up in th e north, that now have totally junk radios because the LCD froze. I like th e LCDs myself, and think that my RCI2900 was about the best, but the damn di splays aren't what they are cracked up to be... Yet another reason the Big Three Jap companies use the displays they do.

* Extremely quiet and sensitive receiver. I've had a LOT of radios through the years, and I have NEVER had a receiver like this one, unless it was an I COM or a YEASU, which can cost thousands of dollars.

>>>Yes, the George has a KILLER rx section... Along with all the other Unid en Exports on the market now under the President name.

* And many, many more features.

By itself, this radio is a force to be reckoned with. But there is more to this offer...

The selling price includes a TX-800 mobile amplifier. These two units were recently serviced and matched to each other (receipt available upon request) .

>>>Who gives a shit? If the tech that did it didn't know what he was doing (and by your comment coming up, I HIGHLY doubt either of you do), then all h e did was turn the coupler and carrier adjust for max wiggle on the meter.

This amplifier will easily produce 1,000 watts DEAD KEY, when used in the 'High" setting.

>>>No it won't. That is out and out bullshit. I know the person who builds the TX series of amplifiers, and they where never designed to go that high, and never did. Hell, I tried to get a thousand watt carrier out of one into a Bird dummy load with two Astron 70A power supplies and a marine battery ba cking them up. Never happen, buddy. You don't have enough drive power out of the single MRF 455 / 2SC2290 (depending on the age of your amp) that they have. Couple that with the Class AB design of the amp (which makes your "Mo dulator" statement coming up look stupid) and you would be bringing in near 2200 watts of DC input.. Divide that amongst 5 transistors and you get near 42 amps into the collector of each 2879.

>>>Right.

Typically, I have not run it that hard.

>>>I would pray not!

Instead, I keep it in the 'low' setting, which provides a 40 watt dead key w
ith a swing of between 300 and 400 watts using a 2.5 watt input.

>>>Mighty non-linear for one of BPs amps. Guess that must be the shitty mod
s to the radio doing that.

On the low side, the amp acts like a modulator.

>>>Not stock, it doesn't. Stock 1 watt in gives about 70 out, 5 watts in gi
ves about 350 watts out. Nice and linear. Just like a Messenger box.... F
rom where the major design of it came from.

This is the preferred mode of operation for this unit, as it puts no unneces
sary strain on either the radio, amp, or your vehicles electrical system.

>>>If you have to worry about your electric system., you have no business ru
nning an amp.

The TX-800 is an amazing amp, not much bigger than a run of the mill 350 or
so.

>>>Read that as it gets HOT quick when running it like it should be able to
run on AM. SSB it works fine with a stock radio driving it, but on AM, they
suck a bit of ass.

But it will outperform amps more than twice it's size. Dual fans keep thing
s cool,

>>>Read that comment as the amp is noisy.

and a front- panel indicator warns should operating temperatures get too hig
h. Of course, this amp has all the usual features, both AM/FM and SSB mode,
as well as a preamp for pulling in the weak signals, but you will never use
it because the receiver on the George is THAT DAMN GOOD!

>>>I will cut off the rest of his spew.

The deal isn't bad, but this asshole belongs selling used cars.

Hello Peter,
I have on occasion used a DX net when a country I needed was found there.
Typically I watch the packet cluster and join in on the pileup. I only mention
this since you obviously are misinformed about my operating practices which
frankly sir are none of your business. Go find some other topic to
flog..you're making an ass of yourself on this one.

So, you see our "problem". If you are a yu stn, who`s gonna work with you?
:(((
What would you like to do more: YU7UF or FU7UY? :(((
Big radio-activity :))) in some country means - what? :(((

A lot of us would never be interesting for amateurs in the world :(((
A lot of us, almost everyone would never be in some "rare" country, wouldn`t
have a nice or interesting pfx etc...

So, I ADORE ops that made lists by numbers: 10-5 nr 0, 10-15 nr1 to nr 9 and
then again...

Maybe we (YU ops) should stop work for a year or two? And then... :)))

Best regards & wishes,

yu7uf, known as

UF

Yes, and it could be worse, you could be JA7UF or W4UF!

But rare countries are rare for a reason:

-- The country is very poor, very few people have enough money to build
a ham radio station.
-- The country is isolated, hard to travel to. (like KH5K or HK0M or
VK0H)
-- The government of that country doesn't like ham radio. (like P5 or,
for many years, BY and ZA)
-- The radio propagation from that country is not good. (like JW and
VU4)

Well, if there is a large pile up I'm sure you realise it is more efficient
to work call areas only.
Or if propagation is best to a certain area, work that area only.

Depends on the circumstances etc..

Cheers, Bill G0VDE.

Bob,
No one has yet and I doubt that they will :)
I began this thread without regard to the 'goodness' or 'badness' of Dx
nets. My request was simply for additional information. I continue to hope
that someone will post the addresss of a web site that lists times &
frequencies of various Dx nets, that I might listen in and form my own
opinion as to their usefulness and desirability.
Thanks for your post.
Regards,
Dennis

I thought it might have been the inept CW operators, who were either stretching their split to more than 60 kHz or operating at 1 QSO every 3 minutes or so. Or working JA on 30 when EU was open. Or not confirming callsigns.

Oh well...

Thank god they had Trey, N5KO on this trip; seemed like the only sane CW-OP to me.

Actually, changing the listening frequency often would work great *IF*
the callers would actually *LISTEN TO THE DX* and *NOT CALL WHEN THE DX
ISN'T CALLING THEM*. (caps intentional & I was tempted to use HTML so I
could use a 60-point font...)

Seriously, I don't think we should blame the DX station for inability to
figure out their listening frequency. That's usually the fault of the
pileup, not the DX.

Thanks, Charles. That is the information I was seeking, that I might form my own opinions about Dx nets. While the sophomoric pseudo-pedantism of others has made for minimally interesting reading, it did not provide relevant information. Others apparently believed that their opinions regarding Dx nets would be of interest to me; such is not the case. Thanks again for the objective information you provided.
Regards,
Dennis

A couple of years ago the prediction was to peak in the year 2000.
That's about as close as they can get beforehand. A couple of years
from now they will be able to look back and tell you exactly when it
was, but hindsight is always better than foresight in these matters.

What truth would that be, Walt? I have little patience with holier-than-thou attitudes.

When I started in this hobby in the late 60s as a kid, I used a Heath receiver that I built myself and a 1-tube crystal controlled homebrew transmitter that ran about 25 watts input. I worked lots of DX with it, including 48 states in 1 year as a Novice. No DX nets, no packet clusters, no microprocessors, no memory keyers, no split operation, no dual watch, none of the modern capabilities that now make working DX child's play.

Nowadays, I break my own share of pileups. And I also check into DX nets on occasion. The attraction of the DX net for me is that it often gives one a chance to actually talk to and get to know some of the DX operators. Sometimes I enjoy this more than simply hearing my callsign and 599.

We should all spend less time here and more time on the air. It's a little more civil there.

BHUTAN DXPEDITION - ANNOUNCEMENT
#2 Most Wanted is QRV May 1-12, 2000

The Kingdom of Bhutan has completed the long awaited Telecommunications Act of 2000 which authorizes amateur radio. An international team has been invited by the Ministry of Communications for the initial introduction of amateur radio in Bhutan, May 1-12, 2000.

The goal will be to give as many DXers as possible, the opportunity for this #2 most wanted country. Initial emphasis will be on the primary bands. The team will be operating from two hotels, with stable power lines, in a politically stable and safe country, without the danger of a Tsunami or a hurricane to put them off of the air. So-called insurance contacts will not be necessary because of the daily upload to the log server, where one can check the logs.

With many DXpeditions, the "little pistol" has been somewhat ignored, but everyone will have a chance at this most rare country. It is the peak of Cycle 23, and the team will take advantage of it to give everyone a chance. All bands and modes will be active, but after the initial demand has been met, more emphasis will be placed on the low bands. RTTY and WARC bands will be emphasized from the beginning. Later in the operation, there will be simplex operation on the higher bands for those without dual VFO capabilities. Three CW, three SSB and one RTTY station will be active around the clock.

Operators include:
9V1YC - James Brooks
JA3IG - Yuu Yoshitani
JA3USA - Mac Shimamoto
JF1IST - Jin Fujiwara
K3VN - Al Hernandez
K4UEE - Bob Allphin
Nï¿½MJ - Mark Johnson
N1DG - Don Greenbaum
OH2BU - Jari Jussila
ON4WW - Mark Demeuleneere
RA3AUU - Harry Booklan
UA3AB - Andy Chesnokov
Wï¿½GJ - Glenn Johnson
W3WL - Wes Lamboley

Six of the operators are veterans of the Heard Island VKï¿½IR operation, three operators just returned from Clipperton Island (FOï¿½AAA), and all have extensive DXpeditioning and/or contesting experience.

Generous financial and logistical support has come from Northern California DX Foundation, INDEXA, Cushcraft, Timewave Technology, Texas Towers and W4MPY QSL's.

QSL CARDS WILL BE AVAILABLE AT DAYTON!!!
Oceania DX Group

I would only disagree with a couple of words in your post. "minimum effort"
has been supplanted by "no effort".

Judging from your above comments Marv, I'd have to agree about it being more civil on the air. Truth is, the "traditional approach where 1000 mindless idiots scream their callsign continuously" is a figment of your imagination. While many poor operators call in pileups it is not the traditional approach. Efficiently breaking a pileup takes considerably more skill than screaming your callsign continuously or getting spoon fed on a net. Also, you fail to realize that some of the mindless idiots screaming their callsign continuously are frequent 'net DXers' with poorly developed operating skills trying to work a new one without assistance.

As for nets, I've used them in the past but much prefer one direct contact rather than two to make a DX QSO. I suppose if a P5 station only shows up on a net, I'd try to 'get on the list' while trying not to be a mindless idiot screaming my 'last two' at the control station. (BTW, I find it surprising with your "little patience with holier-than-thou attitudes" that you could sit obeying some of the net control stations at all, but I guess my perspective must be a little different than yours.) Apparently you have not heard how bad the nets get when a truly rare station is involved - it easily rivals any pileup you may have heard.

We all chase DX for our own reasons. My goal, like many others, is to work all DXCC 'entities'. That is difficult to accomplish if you avoid pileups as you would have missed TX0DX (assuming it is approved as a new one) and many others. But if you prefer to work DX on nets for whatever reason, that's your decision. So lighten up Marv, there has been a lot of great DX the past few weeks! (It's almost as if you aren't getting your share judging from the tone of your comments.) I've worked more new ones this month than any month over the past 10 or 12 years! With Pratas and a big A5 operation around the corner, I'll be enjoying the pileups more than ever....

DX IS!

1103. Accessing Web or Telnet DX Clusters

Newsgroup: rec.radio.amateur.dx
Date: 2000-03-30 00:00:00 UTC
From: ik4vyx@my-deja.com
Message-ID: <8c0fua$o7l$1@nnrp1.deja.com>
Source record: 21437

Hello Guys,

I've read some messages some weeks ago about
accessing telnet/web clusters.
This is IK4VYX, Fabrizio: the developer of the
DXTelnet ham software package and I would like
to put some light on some aspects that resulted
in wrong conclusions.

Somebody wrote:
>DX Telnet program is not a web browser and therefore
>cannot access any web based anything. Period.

That's not true!
The DXTelnet package includes DX-Plorer which gets
the spots from the DXSUMMIT web cluster.
When the JAC cluster existed (Japanese web Cluster)
DXTelnet refreshed periodically from both DXSUMMIT
and JAC.

Someone else wrote:
>You don't need "dxtelnet" to use them;
>any telnet client including the one
>supplied with MS Windows 9x works fine.

Hey Guys, did you try to use the basic
Win 9x telnet?
What about the backspace key and split screens?
DXTelnet has them all.
I dare you to compare the basic MS telnet to
DXTelnet.
DXTelnet has more than 50 real dx clusters
listed.
Any cluster has its associated script and
you can connect just with a click.

Here I will list the main features of DXTelnet
to convince you that DXTelnet is far away
from being a simple "telnet" and is a MUST
for a serious DXer.

You are invited to downlad it from:

http://www.qsl.net/wd4ngb/telnet.htm

1) DXTelnet is currently the only telnet client able to bring you to
both telnet clusters, the CQDX IRC channel, and the DXSUMMIT web

cluster.
Without DXTelnet you need different applications to reach all these sources simultaneously (a telnet client, an IRC client and a web browser).
You can run many DXTelnet session simultaneously, and get all the spots merged, without dupes, into a single session; this means having the cluster world in your hands.

2) The spots you get with DXTelnet, can be fed into any log or into a dxcluster (bridge feature).
The link can be performed via single or double serial port for any DOS or Windows based log.
Some logs are directly supported (non need of serial port to link): LogEQF, LogPlus!, RTTY, WriteLog, PROLOG2K and DX4WIN.
A direct spot data exchange via ethernet to CT logging program has just been implemented.
I Just finished working on a tool to allow spot exchange via ethernet link to the famous DX4WIN and WriteLog programs.

3) The dx spots can be voice spelled, filtered depending on the spotted frequency, spotter area, time window.

4) You can set alerts on wanted strings or prefixes.

5) DXTelnet implements unique online features that are very precious for a DXer: call search online (directky from BUCKMASTER and QSL web sites), QSL Info online (from DB0SDX, IK4LZH and K1XN's golist web sites), Latest hourly WWV report from NOAA space site, latest 425 dx bulletin, PC time adjustment via the NASA internet server and so on...
You just click to get the info/service you want (see the HamInfo menu).

6) If you double click any callsign, DXTelnet tells you:
Country, Area, CQ Zone, ITU Zone, Latitude, Longitude, Time zone, DXCC prefix, Sunset, Sunrise, antenna heading, distance in Km or Miles.

7) Autoconnection/reconnection, keep alive and talk auto answer features allow you to keep it running non stop without being at the desk.

8) A new spot search feature allows you to search for a spotted callsign from an online database containing ALL the spots of the latest years.

9) You can create your own voice cluster thanks to DXTelnet's Voice Broadcasting feature (a PTT to key the radio is also available)

10) You will discover it yourself :-)

Bye for now.

Best (((73))) de Fabrizio (IK4VYX)

YES!!! It's about time! I wonder what ever happened to VK9NS? He seemed to be the guy making many trips back and forth to A5 trying to get it on the air?
Maybe he'll be there at the same time, running his own operation, similar to what happened wqith VK0 a few years ago?

What you think of idea of realization of radioexpedition on Southern Altai?

Southern Altai - highland is on the board of Kazakhstan, Russia, China and Mongoly.
Land of lakes and waterfalls, mountain taiga and stormy rivers, deserts and snowy peaks...
In time of Soviet Union this territory had been absolutelly inaccessible for foreign tourists (and furthermore for radioexpedition) - in locale
It is not enough of ham stations.

The base camp of expedition is planned to place in region by highest Fastigiums of Siberia and Altai of a mountain Belooha, lake Markakol and Zaisan.

If you were interested by our proposal, we can be found on ranges 21Mhz, 28Mhz call sign UN8JZZ (collective radio station)

Walt,

I haven't tried many of the nets, so I couldn't comment. I have checked into the net on 21.355 MHz (the Africana Group) on numerous occasions and have generally enjoyed it. I have found the net control ops to be friendly and not pushy. Many DX ops frequent the net on a more or less continuous basis, and that allows one to get to know them. I guess, like most other things in this hobby, there are good 'uns and there are bad 'uns.

Source record: 21307

I agree Marv I have dropped by the Africana Net a few times after needed ones were spotted there. I had no trouble with the net controllers and all was fine. At least working DX through the net the only pileup you have to bust is a stateside one. And you know really the whole DXCC idea (IMHO) is making the contact with the DX station. That is the challenge for you and your station. The DX net provides a clear channel for you to make your attempt. If you can make it fine otherwise maybe next time. The way it is without the net the challenge is two-fold ...bust the pileup AND work the DX. That is not the spirit of DXCC as I interpret it.
I do feel however that some of the net controls are overly aggressive and interfere too much. Things like " just the last letter of your call again.....OK good contact. " I do not think successful transmission of one letter of your call is a real contact and it certainly is an assisted contact. I don't go for that. 73 / DX

[Snip]

>Later in the operation, there will be simplex operation
>on the higher bands for those without dual VFO capabilities.

That sentence made me doubt the truthfulness of the announcement and I checkked with one of the stated operators. Well, the good news is: The Dxpedition will take place indeed. The bad news is: Well, there is no bad news ;-)

Oh, BTW, there will actually be TWO DXpeditions to Bhutan during that time. Jim Smith, VK9NS has announced that he will operate from A5 as well, possibly even before the big one.

I guess we can look forward to experiencing some exciting pile ups with a bunch of the best DX-operators.

It's not an April's fools joke, folks!

There are many things you can do with DXTelnet
and that you can't do with your browser.
About stocks and Etrade, next version of DXTelnet
will have a new feature with a very similar name
but has nothing to do with stocks, I'm sorry for you.
You will see it when it is released.
No ham related program has it so far, that's why I
will not mention about it here.
I have it under test on my PC and works fine.
My users will be the first to enjoy it when it
is made available.

>
> >DXTelnet has more than 50 real dx clusters

>

> Same spots from 3 places at once ?

If a DXTelnet user lived in US west coast he'd
connect to a 6 or 7 area cluster.
An Italian ham would connect to IK5PWJ-6...
That is why there are several nodes listed.
Also if an Italian ham would like to send a direct
talk to a W6 he would connect to a 6/7 US area
cluster instead of using an ANN/F.
WE ALL LIVE IN DIFFERENT PLACES, DON'T WE? :-)
BTW in many of the nodes I see different DX spots
so what you say above is not true at all.
Even admitting it was true, having a web source
and a cluster backup would help those who use
a web based cluster during contests; web
cluster gets sick very often during contests
due to heavy spot traffic and many web connections.
Also DXTelnet can bring you to nodes such as

CQDX-IRC where you can see DX spots while chatting
with other hams about DX.
VK0MM was there, chatting, some months ago.

>
> >2) The spots you get with DXTelnet, can be fed into any log or into

>
> The old LOOP trick. This is THE feature that made DX Telnet famous !!
>

You are not updated Jim.
Since many versions, DXTelnet forces a spot
marker into the bridged spots to avoids hidden loops.
The marker contains the call of the bridge
activator so loops, if any, are immediately
detected and cut off.
When you see an hidden loop, it is not DXTelnet.
The bridge is not made available to anybody by default
because it requires a SYSOP LEVEL registration.
I send SYSOP LEVEL codes only to cluster
sysops and include a detailed documentation
which deals with all the simple rules that
should be respected to avoid loops,
when activating a bridge.
This allowed many cluster sysops to save money
avoiding to get static IPs and get their
local cluster linked anyway.
I know it is not like Etrade but...

Finally, DXTelnet can be used to bridge DXClusters
with a full, transparent forwarding link,
and you can't express criticism about the forwarding
cause it is the kind of link used by most of the linked
clusters.

> Let us know when you get the Etrade part working, Fabio....
>
> 73, Jim KH2D

I don't like dead discussions so I say in advance
that I won't reply any acid or sarcastic message
any longer.
I will reply only to messages that can bring
new info to the discussion.

About you, Jim, I wish you all the best with
your Etrade but it must not go so well so
far as I see you are always so nervous...
I see it here and in your cluster announcements.
Take it easy, Jim: being angry shortens your life,
even if you live in a paradise place; go snorkeling

sometimes, it relaxes you a lot...
but beware the sharks ~^~^~~ :-)

P.S.
Try DXTelnet at http://www.qsl.net/wd4ngb/telnet.htm

1136. Re: Accessing Web or Telnet DX Clusters

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-01 00:00:00 UTC
From: kh2d@my-deja.com
Message-ID: <38e5ef17.10350780@news.guam.net>
Source record: 21320

I'm not angry, Fabio. I owe you a great debt. Because of DXTelnet, and all the loops and dupes, I learned a lot about software, had to write a front end for the cluster here to get rid of all the garbage.

Glad to hear you added the features to block dupes.. I know what you mean, every now and then I get a blast of 10 to 15 spots with !* DS4xxx in the comment (or similar). Loops might be detected, but if the operator of the node they come from isn't around, they aren't cut off automatically. On the other hand, you can't give people guns and expect them not to shoot each other, even if the DOC file says don't do it. You are providing a tool to create problems. So other people have to create more tools to fix them.....

The scope of the DXCluster has changed greatly - with the cluster as it is today, it's much different than three years ago. Just about any node you Telnet to gets all the spots from everywhere.... We see everything here, so would do much good to hook to four or five other nodes. In the last 233 spots this evening, we've gotten 37 dupes. But at least now they don't go to users, they go to the bit bucket. As do the spots for ALL, INTRUDER, PIRATE, CEMUSIC, VIDEO, etc. We can also filter redundant spots - if five people spot VK0MM in three minutes on the same freq, no need to send all five to users, only one. We live in different places, but the cluster is a global system now, not a bunch of local nodes any more.

The cluster system is starting to resemble the BBS system of years ago - mass confusion. Nobody knows what's hooked to which anymore. On contest weekends it's very evident that we have exceeded our limit of how much trash we can put in one bag - nodes down, and so many spots that no human could possible use them. No contester can work and contest and watch spots when they are comiing at the rate of nine a minute....

Cluster software of the future is going to need lots of filtering options.....

Anyway, again, I'm not at all angry. You and I just have a totally different idea of what a DXCluster system is for - I think it's a source of usefull information and you seem to think it's a world wide chat network. I've always been perfectly happy to be connected to the local node here, and you enjoy banging around and finding nodes on the other side of the world to connect to...

Different strokes for different folks..... but I still do most of my DX'ing with the radio, not with the computer.....

Call me old fashioned, but I don't need PathFinder for QSL info - if I work somebody and I want QSL info, I just ask the guy when I work him :-)

Anyway, let me know when you get Etrade going and maybe I'll try the demo...

73, Jim KH2D

Subject: Great DX conditions or "don't look now but you S-units are showing"

Did anyone else catch the fantastic band opening last night? I could not sleep so I was up late and was tuning
around 20 meters when I heard the clock strike midnight. Suddenly the band really came to life with some great
DX stuff. First I heard Romeo Germany 8 Uniform really banging in from somewhere in the south Atlantic with a
big pile-up on the frequency. I picked a spot and dropped in my call. "Mike India Lima go ahead". "Germany 8
Uniform, you are 70 over 9, QSL info please." "Not to worry India Lima, my card 63% to you via burro."
"Aw-Right, got him!"
Next Papa Hotel 0 Nancy Echo gave me a call on CW running a modified HW-8 at a KW output with a re-worked
cash register as a keyboard keyer. Maybe try a little more CW action. Called CQ on CW and answered by BIG
CARRIER, weak audio from Victor 0 India Charlie Echo. "Your audio is very week, OM, try turning up the gain."
Found out the audio section of his transmitter was not working and he was modulating by screaming at the final
tubes. Swung the beam further south and there was Charlie 0 Alpha X-Ray in the Feedline Islands. Gave him a
call. "Kilo 5 Mike India Lima you are pinning my S meter, do not transmit again I am afraid you may damage my
rig." "Roger roger Alpha X-ray, what is QSL info please?" He didn't reply. OK, lets see what's going on in
the Pacific. Swing the beam on around. Wow! there is Fox Ocean 0 Lima running 80 over 9! "Fox Ocean 0 Lima
this is Kilo 5 Mike India Lima you are 80 over 9, what are you running?" "Ok Mike India Lima, rig here is a
converted cordless phone running 1.63 watts using lamp cord feedline to a chicken wire fence." Now this is
great, lets see what is going down on the European front. Swing the ole beam on around past north. Man listen
to those signals! Better catch this one. Dropped in my call. "Mike India Lima go ahead." "Roger roger,
Germany 0 Tango Charlie Hotel Alpha, you are 62.3 db over S9, Q5 copy. What is my report?" "Mike India Lima,
you are minus S8, can only copy on negative voice peaks, try again." "MINUS S8!!, WHADDYAMEAN MINUSE S8? Im
running 14 bazillion watts to a 42 1/2 element Thunder Stick at 163.42

feet!! Minus S8 my Aunt Fanny!" Wait a
minute, what's that call again? G0TCHA? What's today? Let's

see that calendar. Aw rats!

It's always the same old story:
guns exist and will always exist.
the result depends on how they use them.

> The scope of the DXCluster has changed greatly
>- with the cluster as it is today,
>it's much different than three years ago.
>Just about any node you Telnet to gets all

Also DXTelnet has a powerful antidupe filter.
Combined with area, frequency and time filters
the user can really get only the spots he wants.

>As do the spots for ALL, INTRUDER, PIRATE,
>CEMUSIC, VIDEO, etc. We can also filter
>redundant spots - if five people spot
>VK0MM in three minutes on the same freq,

>no need to send all five to users,
>only one. We live in different places,
>but the cluster is a global system now,
>not a bunch of local nodes any more.

What one considers garbage might turn interesting
for someone else; otherwise we have to think
that the person who submitted a certain spot
was brain damaged ... if it is of no interest
for anybody...
As radio claims to be a democratic world, filters
should be at a user level, not global
in the cluster system.

>The cluster system is starting to resemble the BBS
>system of years ago - mass confusion.
>Nobody knows what's hooked to which anymore.
>On contest weekends it's very evident that

>and so many spots that no human could possible
>use them. No contester can work and contest
>and watch spots when they are comiing
>at the rate of nine a minute....

Contest teams are well organized; they often
have someone who is only looking at the spots
and acts as "human" filter.

>Cluster software of the future is going to
>need lots of filtering options.....

I agree on this but, as I said above,
I think the filters should be at a user level.
Our hobby has so many faces... clusters should
support all the faces then filters should
customize the info the user is interested about.

>Anyway, again, I'm not at all angry.
>You and I just have a totally different idea of
>what a DXCluster system is for -
>I think it's a source of usefull information
>and you seem to think it's a world wide chat network.

I think that chatting could help us hams in getting
closer.
A DX is so short that there's no kind of
exchange except a radio report.
Also, DX chatting is good to organize real
time skeds.
But I agree with you that random DX gives more
satisfaction.

>I've always been perfectly happy to be connected
>to the local node here, and you enjoy
>banging around and finding nodes on the other
>side of the world to connect to...
>Different strokes for different folks.....

If all of us were cloned this would be
a boring world :-)

>but I still do most of my DX'ing
>with the radio, not with the computer.....
>
>Call me old fashioned, but I don't need
>PathFinder for QSL info - if I work
>somebody and I want QSL info, I just ask
>the guy when I work him
>:-)

I agree with you on this but I think that
the serious DXer who is in competition for top
score should use all the available instruments
to reach his target.
If he does not while the others do, this could make
the difference.

>Anyway, let me know when you get Etrade
>going and maybe I'll try the demo...
>
>73, Jim KH2D

If it worked really well, sorry to say but
I would keep it for me :-)

CSS to include access in all of product line, in addition to new Golist for Windows

Muscle Shoals, Alabama. April 3, 2000 Creative Services Software announced today that they have begun negotiations with The Golist to include direct support of Golist in the LogWindows 3.07 and PacTerm 98/ PkTerm 99 programs, as well as begin work on a Windows 32 bit interface for the Golist data..

The GOLIST, QSL MANAGER LIST, is "The Choice of DXers World Wide". It is the most accurate QSL Manager database .

"Supporting the new Golist database in our logging and TNC software continues our support to provide the best software for the ham community" said Rick Ruhl, N4GDO, President and owner of Creative Service Software. "I'm also very excited about working with John Shelton, K1XN, to produce a Windows 32 bit interface for Golist. As an avid DXer, I've always found Golist to be a necessary part of any DXer's ham shack".

Creative Services Software is at http://www.cssincorp.com
The Golist is at http://www.itis.net/golist/

Windows, Windows 95, Windows 98 , Windows NT and Windows 2000 are Registered Trademarks of Microsoft Corporation.

It's known bug in the old DOS Turbo Pascal compiler. Compiled program have this error on machines faster than 200 MHZ.

See http://www.intel.com/support/processors/pentiumII/run200.htm for all the info.

The problem is related to the PASCAL compiler used in the design of MP.
If you check with the author -- W6EL - he will be able to assist you. While
the product is no longer marketed, Shel supports registered users.

1149. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-02 00:00:00 UTC
From: Ron <no-spam@no-spam.non>
Message-ID: <EoLF4.88$_3.14000@news7.onvoy.net>
Source record: 21333

You are welcome to connect to the internet accessible AR-Cluster at KC0DJO
in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH. Please
enter your QTH in the form: Chicago IL or Oslo Norway so that we will know
where all our new friends are from! You will also be reminded to
SET/LOCATION, that's optional but recommended. If you set your location,
then the AR-Cluster will calculate beam headings for you to various
prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and Command
List go to:

http://www.cestro.com/pcluster/logon.html

The AR-Cluster homepage is http://149.74.21.166

Ideally you should use your logging program to make your telnet connection.
Its a huge advantage as then your logging program will monitor the dx spots
and alert you to contacts you need. However, here are two very simple ways
to connect. The first uses the built-in telnet client in Win95/98. The
second better way uses the free HyperTerminal Private Edition program.

Using the built-in telnet client:

Click START/RUN, then in the box enter: telnet 209.32.226.63 Now click
OK. If you use a telephone modem for internet access, and were not already
connected, your modem should begin dialing automatically.

Once connected to the KC0DJO AR-Cluster enter your call. If what you type
does not display, then you must turn on local echo. In the Telnet window
click on Terminal/Preferences.. and check Local Echo and then click on OK.

Using HyperTerminal:

I am sure you will greatly prefer HyperTerminal, BUT you will need a more recent copy of HyperTerminal than that which comes with Win95/98. Pick up the latest version of HyperTerminal Private Edition for free personal use from ZDNET.COM at:

http://www.zdnet.com/downloads/specials/free.html

Search there for HyperTerminal and download the program. When downloading you may select 'Run this program from its current location' I did that, it works, but you may prefer to save the install program in a directory of your choosing and execute it from there. When installing I choose all the default install options, which caused my old version of HyperTerminal to be replaced by this new version. All of my previous connection commands were retained.

Once you have installed HyperTerminal Private Edition:

Simply click here: telnet:\\209.32.226.63 -OR-

START/RUN, then in the box enter telnet:\\209.32.226.63 and click OK -OR-

Enter telnet:\\209.32.226.63 in the address field of your broswer and hit return -OR-

Start HyperTerminal and set up an ICON for KC0DJO, useful for quick starting later, selecting TCP/IP as your connection method with a host address of 209.32.226.63 then click OK.

You should set certain options for best operation:

File/Properties/Settings/ASCII Setup/ and enable these options:

Send line ends with line feeds
Echo typed characters locally
Wrap lines that exceed terminal width

There are many programs much better suited for cluster access. Look here:

http://www.cestro.com/pcluster/files.html

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

Seems like a never ending quest.

I'm looking for the following Drake C-line gear, must be good to
excellent condition, fully operational (if otherwise, please state
what's up).

MS-4 Speaker
T4X-C Transmitter
500 and 250 Hz 2nd IF filters for R4C

I would also be interested in an R4C, as long as it has 5 filter
positions (not 4).

Please call toll free at (800) 962-2949, or email to
NeilR@innermedia.com

Thanks, and best 73's.

Neil, N1DMA

ROTFLU!

Actually I have found freeware which is quite worthwhile.

Lessee... do you surf the web, Joe? Which do you use? Netscape (free) or IE (free)?

How much do sunrises cost? How much do hugs from your children cost?

You have one screwed up set of ideas, I will grant you THAT!

> If you want good, funtional well written software you have to pay the price

Yup, another of the nonsensical 'if it costs more it is by definition BETTER' crowd.

ROTFLU!

> Maybe you should have a conversation with a software author and see what it
> takes to write some of these programs then make your judgement about it's
> value.

Why should I? I do not care how hard they work on it. I only care as a consumer about how well it works for me relative to the cost I have to pay for it.

LEGAL CABLE TV DE-SCRAMBLER

Want to watch Sporting Events?--Movies?--Pay-Per-View??

*This is the Famous R-O Shack TV Descrambler
You can assemble it from Radio Shack parts for about $12 to $15.

We Send You:
1, E-Z To follow Assembly Instructions.
2. E-Z To read Original Drawings.
3. Total Parts List.

**** PLUS SOMETHING NEW YOU MUST HAVE! ****
Something you can't do without.

THE UP-TO-DATE 6 PAGE REPORT:
USING A DESCRAMBLER LEGALLY

Warning: You should not build a TV Descrambler without
reading this report first.

Frequently Asked Questions--CABLE TV DESCRAMBLER

Q: Will the descrambler work on Fiber, TCI, Jarrod
and satellite systems?
A: The answer is YES. In respect to satellite,
you just get more stuff! There is one exception:
The descrambler will not work with DSS satellite.

Q: Do I need a converter box?
A: This plan works with or without a converter box.
Specific instructions are included in the plans for each!
Q: Can the cable company detect that I have the descrambler?

A: No, the signal descrambles right at the box and does
not move back through the line!

Q: Do I have to alter my existing cable system,
television or VCR?
A: The answer is no!

Q: Does this work with my remote control?
A: The answer is yes. The descrambler is
manually controlled--but very easy to use!

Q: Can you email me the plans?
A: No the program comes with an easy to follow picture guide.

Q: Does this work everywhere across the country?
A: Yes, everywhere in the USA plus England,
Brazil, Canada and other countries!

Q: Is this deal guaranteed?
A: Yes, if you are unhappy for any reason we will refund your money.

Q: When I order, when will I get my package?
A: We mail out all orders within 24 hours of receiving them.

Q: How much does it cost to get the instruction
plans, the easy to follow diagram, and most
important of all the "Using a Descrambler LEGALLY Report".
A: You get the complete 6 page report and instruction package all for just--$10.00

Q: How do I order?
A: Fill out form below and send it, along
with your $10.00 payment to:

CABLE FREE-TV
12187 S. Orange Blossom Trail #116
Orlando Fl 32837

(Cash, Check or Money Order.)

(Florida residents include 7% Florida State Sales Tax)

(All orders outside the U.S.A. add $5.00)

=========
Hi Lee,
US4LCW is in the Ukraine, probably in the Kharkov region.
The block for the Ukraine is currently:
UR to UZ -- Also EM-EO (ITU ZONE 29) (CQ ZONE 16)

I have just updated the Mega Prefix list at URL:
http://www.ac6v.com/pageab.html
Shows all DXCC country prefixes with new data on the Russian and others
Oblasts, for example:

UR to UZ Ukraine Also EM-EO
oblast identifier territory
UU1J-UU8J, UU0J KR Crimea, Simferopol
UU9J SL Sevastopol
Oblast determination by the 1st letter of suffix:
A SU Sumy
B TE Ternopol
C CH Cherkassy
D ZA Zakarpatskaya
oblast, Uzhgorod
E DN Dnepropetrovsk
F OD Odessa
G HE Kherson
H PO Poltava
I DO Donetsk
K RI Rivno
L HA Kharkov
M LU Lugansk
N VI Vinnitsa
P VO Volynskaya oblast, Lutsk

Q ZP Zaporozhie
R CR Chernigov
S IF Ivano-Frankivsk
T HM Khmelnitsky
U KO, KV Kiev city and Kiev region
V KI Kirovograd
W LV Lviv
X ZH Zhitomir
Y CN Chernovtsy
Z NI Nikilaev
URA-UYZ ordinary license
EMA-EOZ special license
UVA-UWZ, UZA-UZZ reserved
U5 World War II veterans
two-letter suffix 1st (highest) license category
three-letter suffix 2nd,3rd,4th license categories
second letter of three-letter suffix W-Z club stations

FYI: See the CIA Factbook at URL:
http://www.odci.gov/cia/publications/factbook/up.html
It sez: Ukraine Independence: 1 December 1991 (from Soviet Union)
FYI: The Ukraine counts as a DXCC Country

1168. New Details for 160-40 Loop

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-04 00:00:00 UTC
From: "B. Edginton" <ben@bensweb.freeserve.co.uk>
Message-ID: <8cbcs0$oq8$24@newsg2.svr.pol.co.uk>
Source record: 21346

As time goes on new aspects of the G0CWT Loop come to light. The latest was when RF was noticed on the feeder from loop to rig.
When I finally solved the problem it also cleared up another mysterious problem that had sometimes caused a properly tuned loop to have a poor SWR when connected to the rig but a 1 to 1 SWR when measured with the MFJ 259 SWR Analyser.

Details can be found by going to http://members.aol.com/benprom and then click on New Info
there are also the latest details of a 160 metre thin wire Loop that also works as a full wave loop on 40 metres and covers other bands up to 10 metres.

Or look at it another way how to use your 40 metre Loop on 160 metres

Thanks for your interest feedback would be welcome, but not the RF type.
Cheers and 73 from Ben G0CWT in England

April 4 at about 0200 ZULU on 20M SSB I worked a YL, US4LCW, name Anna.

I am pretty sure she is in one of the Russian countries......but I am
not sure about which one.

What country would US4LCW probably be in?

I have over 330 DXCC countries, but this is the first ever YL for me
from Russia!! Good op, too......

Thank you..........Lee KA0FPJ

I am pretty sure you should QSL via UA4LCW for this one. It would be located in central Russia on the Volga River. I visited there in 1990 and while we were in Kazan (a little farther north) we used the call US4P during the IARU contest. The US prefix is used when visiting americans get permission to contest there.

Good luck,

Mike Hansow

Hi guys !

The call sign US4LCW is call of YL Anna .
She lives in Kharkov, Ukraine.
All calls UR-UZ, EM-EO after 1.1.1992 are property of Ukraine.

Hi all.

I'm looking for a Collins 312b-3 speaker, or a 516F-2 cabinet that I
can put a speaker into. Need not be perfect condition, but not dented
please.

Thanks in advance, and any/all leads are gratefully received.

FS quantity 4 Varian vzj2700d4 3kw klystron hpa's. complete and operational with solid state ipa's and 80 dB of gain. wr-137 input and output. 20 dB manual attenuator. 208 volts three phase. Full metering: beam voltage, beam current, body current, reflected power, forward power (4000 watts), drive power, filament volts and current, beam and filament hours. Many spares including klystrons,
filament and beam transformers, 3 phase autotransformers, meters, wiring harnesses, and more.
These amps have either 12 or 24 channel tubes and will make >3kw across any 40 mHz. bandwidth.
Higher power outputs are easily obtainable with reduced bandwidth tuning of the klystron. The tube is a Varian va936 series, 5 cavity. Typical operating parameters are 8kv@1 amp with PO about 3 kw. I
have operated the amps at 8.5kv with output near 4kw. The beam power supply is variable from about 4 kv up to about 10 kv. The amp has arc detection and shutdown, as well as an output isolator.
For more specific information please e-mail or phone. SERIOUS INQUIRES ONLY! THESE ARE NOT TOYS!

1177. Dxpeditions working by numbers

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-05 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <8cfo54$s6n$1@nntp9.atl.mindspring.net>
Source record: 21211

I notice the 4W6 operators work by numbers. The only problem is that parts of the world only have conditions
for a few minutes to an hour and they often don't get to call. The Dxpedition that is 3/3 to 4/4 and is expecting the
stations in marginal areas to hear all their instructions are wrong. I heard one instance when a station called out
of sequence and was called down. I heard the Dx just say QRZ and I almost called too, but I heard enough to know he was calling
another area.

A better way is to concentrate on propagation rather than call area. SE Asia has one or two sharp peaks in SE USA. On 20, 17, and 15 we work them an hour before even the mid-west and often Georgia may not have conditions when Virginia or Maryland do. If conditions are great there is a second peak much later. Run any of the major propagation programs from a point in Georgia or nearby state to say 9M2 or even BV. On 20 in April there is a peak at 1000 to 1100Z with MUF just above 18 Mhz and another at 1600Z that is good for 21Mhz. There are fewer openings at 2300 to 0100 above 18Mhz in April altho we get VU and UA0 at this time.
Experienced operators should learn this. If the propagation shows 2 or more hops are necessary then this should raise a flag that special operating care is needed if stations in these areas are to be worked. The SE ASIA station that works JA or W6 during the opening or the rare African who works East Coast USA need to take time to see if other areas can be worked. That's good operating practice.

Nicely put.

Reminds me of calling for North America 7's which puts western Alaska
against Arizona, rather difficult when we are north of Hawaii and arctic
propagation nowhere near continental USA. :-)

The experienced op will turn his antenna from time to time when working
by the numbers. He may, in fact, be trying to maximize his number of
QSOs to a particular area by beaming that area when asking for a
particular number. Any station having that number outside of the
desired geographical area is worked but he works mostly the desired
area. It may also be that beam heading for the West Coast U.S. and and
most of Western Europe can be straddled and that he is covering those
two areas like a blanket. This is true, for example, for those in East
Africa.

The DX station is always going to do it his way and you must adapt to
his operating desires. He doesn't adapt to yours. You're free to

implement anything you desire on your next trip to a rare spot.

1182. QST--FRACTAL ANTENNA CHALLENGE--QST

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-06 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000406023714.01080.00000131@ng-cr1.aol.com>
Source record: 21216

QST--

Chuck O'Neal, K1KW, has issued a challenge to compare his 10M linear loaded antenna with the 10M fractal quad Yagi (FQY) seen on the ham page of:

http://www.fractenna.com.

The specs on the FQY indicate at least 3 dB gain compared to a dipole (in the same environment) and better than 20dB F/B. Impedance is close to 50 ohms, with no matching whatsoever.

Chuck's linear loaded antenna will have the same turning radius. Specs are not known, but Chuck contends that 'fractals are linear loading' so this should be interesting. [BTW, fractal antennas are certainly not linear loads any more than a nonlinear circuit is linear.]

On the air comparisons with DX are not scientific. That's what the specs are for. But it should be fun to see how these two antennas 'play' at the same heights, with very similar types of locations (separation about 20-25 miles LOS) and get comparison signal reports.

You are invited to hear this challenge on the air.

Plans are for Chuck and I to operate N1IR and two other local ops to operate from K1KW.

Tentative date is May 13, 2000 on about 28500 KHz. Time TBA but probably about 14 or 1500Z. Propagation to Europe is a requirement; a 'raindate' will also be posted.

Please pass this along to any list, buddy, or NG you feel may enjoy knowing about this.

73,
Chip N1IR

1183. Re: Dxpeditions working by numbers

Newsgroup: rec.radio.amateur.dx

From: kh2d@my-deja.com
Message-ID: <38ec4f6f.14275926@news.guam.net>
Source record: 21217

You have forgotten one key factor, Dave. Where most DXpeditions are concerned, 'good operating practice' has given way to numbers of Q's. A lot of todays DXpeditions are only concerned with a big Q number. They went to have fun, but to be 'better' than the 'other guys' that went someplace else, they have to have more Q's in the log.

A check of a friends call in a recent DXpeditions online logs reveals 18 band/mode QSO's. If that was true for everybody, they worked 78,000 Q's but really only worked about 4,300 hams. Which is what a good single op can do in a weekend contest - not much of an accomplishment for 12 operators over a two week period....

I think we'd all be amazed if we saw the number of unique call signs worked by major DXpeditions, instead of just the total QSO's.

How the DXpeditions 'do it' is a subject that will be discussed eternally. Yes, it's much better to work areas by propagation, if you want to be 'fair' to as many people as possible. But numbers always enter into the equasion - many nights we hear African stations working EU pileups on ten meters. We can't crack the Europeans, especially with the African station beaming the wrong way. On the other hand, if the African station was beaming the Pacific, there aren't enuff hams listening in the middle of the night to keep him busy for 15 minutes, so he beams the high population areas and goes for the numbers. Same thing happens with 4W - great propagation here late at night, but antenna in the wrong direction working NA.

I know when the band is open from my QTH to Africa, so I get on and call CQ AFRICA at the right time. But since the band is usually open to Europe at the same time it's open to Africa, I have to decided if I want to sit and listen to a hundred Europeans calling me and see if I can hear anybody in Africa, or if I want to go do something else. Our DXing isn't only affected by our operating skills and the skills of the DX station we are trying to work, it's affected by anyone who has propagation to us and/or the DX..... If the 4W station asks for W4's and the W6's won't stand by and let him see if anybody is there, it doesn't do much good for him to ask.

In a contest, you will hear a good operator in the Carribean tell the JA's to standby and ask for other stations in Asia or Oceania - he needs the multiplier for the score - DXpeditions don't get multipliers.

You also have to consider what's going on at the other end - it was very interesting here listening to 4W/W3UR for that last week or so. He was constantly getting bombarded with requests for this band/that

area/this time/that sunrise/this sunset. The guy is away from home, in a different time zone, tired from traveling and not sleeping enuff - he's on the radio working as many people as he can. It's a bit much to expect him to realize that he has a 20 minute window to anyplace at a sunrise on the other side of the world.

One thing we DX'ers tend to forget - we can't work EVERYTHING. We could if the whole world would keep still while we were doing it, but that's not going to happen. We need to be smart enuff to realize when we are beaten by propagation, operating times, and habits of the DX station and just write off that particular DX and go look for something else to work.

In my case, VP6BR is a good example of when it's time to not bother. VP6BR is an excellent CW operator - his rate is right up there with the best. But his operating style rewards persistance, not skill. He spreads his pileups out all over the place, and NEVER works two stations on the same frequency - some times he tunes UP after each QSO, sometimes he randomly pops his listening frequency all over the place. The people who are working him are those who are willing to plant themselves on a frequency and call him until he happens to tune by and hear them, irregardless if it take two or three hours of calling to make that happen. I'm not willing to operate that way - if I can't find the station the DX is working in a split pileup and work him in a few minutes, then I feel it's a waste of time for me to sit and call endlessly in the hopes he will hear me - I don't feel that type of operating reflects good operating skills on my part. And I'm smart enuff to realize that it's not worth frustrating myself trying to do things my way, so I just don't bother. When I listen to him, I hear many, many 'QSO B4' - why should I sit in a pileup of QRM for hours with people who don't even know if they've worked him before or not ? I'm smarter than that....

Why do I listen ? Because I learn, and because I realize how much nicer the ham bands would be if people would learn to use the receiver half of their radio instead of the transmiter half all the time.

We'll never reach a point where all DX operates by the 'approved method'. Because there is not really any method that applies to every situation, and because going to Good Grief Reef on a DXpedition doesn't require any particular level of skill - it only requires a budget that pays for the trip.

We all need to make an individual decision when it comes to a particular DX station, based on his operating skills, his operating style, our operating skills, our antenna systems, propagation, etc.

Smart DX'ers aren't necessarily the first ones in the pileup when the cluster spot shows up - sometimes the smartest DX'ers are the ones who aren't calling at all.....

Very interesting to read the wisely put comments from both Jim and Dave, to the subject of operating a DX- spedition. Not much I can add, besides a wish that DXers, wherever they may be, would read and follow the common sense operating procedures you point at. Maybe a final point of advise to operators participating in DX-peditions, or operators working from exotic DX entities in general. Don't hide your identity, send your callsign frequently, preferably after each QSO. Perhaps it would slow down your QSO rate , but you would gain by avoiding many of the dupes, and even reduce the pileup and the QRM, not to mention all the on frequency requests for callsign.

As this reflector well may be accessed by DXers world-wide, probably too few hams would read and participate. Why don't the amateur radio magazines, particularly the larger ones as CQ, QST, RadCom and others, print articles and raises the question of good operating practice ? Do they lack input, or isn't the subject of interest to the editors ? Jim, Dave and others, post your comments to your ham magazines as well as to this reflector.

Hi all.

Looking to find (buy) the following:

1. Drake FF-1 Crystal unit for TR4cw transceivers.
2. External crystal cover (sheet metal) for Drake R4C. It's the one
for the band crystals, not the crystal filters.
3. Drake R4C NB Brackets
4. Drake R4C sheet metal cover that goes over the filter switch.

Any all help/leads is appreciated.

Regards;

Neil, N1DMA

1188. ARRL values lazy hams more than Extras

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-06 00:00:00 UTC
From: hermit_thrush@my-deja.com
Message-ID: <8cirej$ip8$1@nnrp1.deja.com>

ARRL, who brought you the incentive licensing debacle, has once again decided to cash in; now on the reduced license requirements by offering a discount to only those hams who are upgrading.

Recall the defenses of some on here that the ARRL restructuring was needed to save ham radio and not to increase the membershp ? No, they'll do that by piggybacking a discount for the lazy bastards who are upgrading on April 15.

The ARRL Membership Discount Coupon will offer
examination and upgrade applicants a chance to recoup the usual $6.65 processing fee in the form of an equal discount from the cost of a new or renewed ARRL membership.

Well, screw the rest of us is the easiest way to phrase what they think of current members, who wasted their time on 20 wpm code tests and diagrams of tubes.

Why would WB2OTK WANT to get back on the air ? Why would any of us with a brain want to ?

What would we expect from an organization that thinks it's fine to discount the memberships of old farts who receive social security check handouts every month in addition to their fat pensions, but thinks the disabled can go fend for themselves, by denying a rate reduction at every board meeting. That's right, discount it for the most frequent service users, leave it at $34 for the poor folks who are disabled.

Discount it for kids who have no other expenses in life, screw the guy on oxygen or the guy with no legs. Let him shell out the 6 bucks to keep K1ZZ, et al., comfy in northeast Connecticut.

ARRL-VEC Manager Bart Jahnke, W9JJ, says the League is offering the discount coupon as a way to "soften the blow" by giving applicants a one-time $6.65 discount from the cost of an ARRL full or associate membership.

Got that right. One time is all you'll see these newly enhanced novices as ARRL members. And the last time is how you'll see many more.

Dayton Hamvention® has announced that the Smothers Brothers comedy team will headline the post-banquet entertainment this year. This year's Hamvention also will host the ARRL National Convention.

Why don't they just have some new Extras get up and explain the workings of F layer propagation or the difference between IF and AF DSP ?

More recently, Dick Smothers has gained a reputation as a vintner in California.

Excellent. He can bring some with him and hand it out to the new Extras since they'll all be longing to hold an Eyeball Belch Contest with Riley as judge and jury (a roll he relishes) a la 75 meters after dinner.

I am glad to see several Dxpeditions start using more sane ways like BQ9P
asking for call area 4 North and South america only
or CE0ZR asking for Africa or VK only.

Dave Heil is correct that the Dxpdedition can do waht they want. I say that
leaving out a maginal propagation area could mean less funding for the next
one. From most locations there is a area that is disadvantaged. It does
not take much effort to work all the deserving and still make the big Q
count expected.

I also agree that there are ways to cut down the band sprawl. There is
little more damning to Dxing that to cover much ofthe band with
stations calling one Dxpedition. Going by numbers is one way to cut
sprawl. Calling for select areas is another. Too bad everyone does not
conditions to a dxpedition 24 hours a day...but then almost no method would
cut the initial pile up.

I just wanted to get the thinking started on this and mission accomplished!

OH BOY!!!!! a real doubleheader! Tell me will most of the
banquet attendees fall asleep halfway thru the proceedings?
I understand that The amount of "sleepy-heads" at the banquet
even puts Senator Strom Thurmond's performances in Coingress to
shame.....

Don't Kenwood already include that inside of
the box with your new HF radio? (In poorly translated
"Jap-English" of course. Complete with those cute pictures
that look loke something out of Pokemon)

I dare say that the recent intense solar activity may give amateurs a chance
to experience some rare CW layer propagation. I going to give it a try.

A good point. The interesting fact is that with all the screaming
about standards, no one offers any set of standards on any
specific basis. Just the same bull about "dumbing down", less
effort, relaxing the rules, lowering requiremnts,
yada, yada, yada. If someone could spell out an
objective of what they wanted and how to measure it in
a reasonable means, perhaps others would listen.

Cheers,
Bill K2UNK

1203. Re: BQ9P-Expedition

Newsgroup: rec.radio.amateur.dx

Source record: 21053

Well, unfortunately, at the last minute I had to bow out of the BQ9P fun, or I'd be in the piles drinking Taiwan Beer even as I type.

First, all BQ9P/BV9P qsl cards from PRIOR operations are out in the mail, save perhaps stuff received in the last few weeks (yes, I still get 25 requests a week.....). IF you do not have yours, I've either
-not received it
-mailed it and it was lost
-it's awaiting some other card that I manage.

Some insights:

-if you send me 10 cards for various hams I manage, it takes longer to process, as it has to go thru 10 sorts. Given that BQ9P cards are folding, your envelope tends to get thick. I've gotten parts of several qsl cards back, due to processing problems along the way back in the mail.

-Many folks are using real thin envelopes, and folding them. I find that the large US envelopes, with folds, get eaten alive by the postal machinery.

If you want other tips, I wrote an article for DX Magazine with all sorts of trivia on what goes wrong...it's placed on the web compliments of DX Magazine and the GO list at

http://www.itis.net/golist/tips.htm

any comments would be appreciated.

I'm up to my ears in cards, will have touched 70,000 when the year is out. However, if you want to know if I"ve seen your BQ9P card, or others, send me an email. I may be a bit in responding, but I try to respond to all the email I get

ku9c@arrl.net

will find me.

Hi All,

Nice to see some discussion on good operating procedures.
We're going to Willis Is in May this year (VK9WI).
There is a summary of "good practise" ideas on our
web page at http://www.qsl.net/vk9wi

I'd welcome your comments ?

The CBer hermit_thrush@my-deja.com, wrote:
>ARRL, who brought you the incentive licensing debacle,

Incentive licensing has been around almost as long as ham radio itself. The idea of an IL structure was created in 1923. Back then the government developed the Extra First Class amateur license; to be awarded the ticket one had to be licensed for at least two years, take a test similar to the First Class exam of that period, copy 20 wpm, and have a clean record. Extras were then permitted to operate on a band that those with lessor grade licenses were forbidden to use. That band (200-220 meters) had originally been open to all hams.

Moreover, in 1959, the FCC asked hams, via a Notice of Inquiry, what incentives could be tacked on to the Extra Class license.

It was the government which first suggested incentive licensing, not the ARRL.

Please read my challenge. No "terms" were stated or agreed.
This response is therefore useless and this "plan" is a joke.

THE conditions are simply the same as you employ
during your 10M runs: You run your stuff and get reports from some
DX station. I run my stuff and get reports from the same DX station,
either right before you or after you. We compare reports and therefore
determing whose system is working better. Just like in the real
world during a contest. None of this attempting to equalize things....
too communistic for me. You can make any assumptions concerning
the comparative reports you feel necessary to account for power,
antenna gain, phase of the moon....ect. in the determination of how
your antenna works.

This is just as "scientific" as your run postings in determining antenna
performance....probably more so since there will now be a reference, me,
and any others that wish to join in. There are a few locals that will
probably join us as well..

I will be running my normal station. 1 KW and my homebrew log antennas.
I suggest you run your amp if you have one so the difference won't be
too great....as long as your antenna can take it.

Anyone else is free to join in on the fun. I will be on this weekend,
Saturday morning, 28.450 - 28.460 starting at aprox. 9 AM EDT.
Maybe Sunday morning as well.

1214. AF7 RTTY Modem

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-07 00:00:00 UTC
From: Friedrich Ratering <DK5QK@t-online.de>
Message-ID: <38EDACC1.76FCC860@t-online.de>
Source record: 21240

A friend of mine, DJ6AU, wants to try RTTY on his next MM0/DJ6AU expedition to the Shetland Islands and found a second hand RTTY Modem named AF7, manufactured by THB, but without any paperwork.
If anyone has a manuel or instructions or circuit layout we would be very interested in receiving it. In this case please send us an e-mail to DK5QK@t-online.de. Of course any costs for copies, mail etc. are paid by us.

Did anyone receive a QSL of the 1998 expedtition to BQ9P Pratas-Isl?
I saw several OMs on our packet dx cluster noting that they don't have a confirmation. The same happened to me, whereas I sent a SASE in the beginning of 1999.

the mgr is KU9C, a very good friend and excellent qsl manager. I he got
your card and you were in the log, you got your card. I suggest trying
him again

try

ku9c@ix.netcom.com

but I think I heard he was on the dxpedition again (must be nice to have
that free time)

Hey butt head, they just lowered the code requirements, not the
theory! Do you understand? What does explaining the F layer or the
differences between IF and AF DSP have to do with lowering the CW
test speed?
Please help me out on this one OK.

Or some OLD Extras, for that matter?

Even more amusing would be a 20 WPM challenge, where whining Extras can prove (or not) their competence at their license CW speed.

Then we could have a contest: Hand a bunch of whining Extras a microphone, tools and the approriate parts, then have them wire up a cable for a TAPR-2 TNC. (Hi, Alan!)

Or maybe we can have a bunch of whining Extras try to pick a photo of the inside of their rig out of three possible choices?

The REAL amusement will be NEXT year! We can have a challenge, grab a random group of new Extras and a random group of whining Extras and see who is faster and more accurate in the tuning of tube-driven HF rigs. I would have suggested a race to REPAIR them, but it would be hard to find three whining Extras who would take the challenge.

REAL 20WPM Extras don't feel threatened by 5WPM Extras, because their sense of manhood isn't related to their CW speed.

Give him a couple of days to look up the difference between CW and the F layer, okay . . ?

Remember, those who scream the loudest about a relaxation of standard are those who aren't sure that they even still could pass the exams they passed before.

Just another week before I can get my "Extra Lite" :-)

Should we set up a net frequency for us newly minted extras and generals
to try out our new spectrum on? 14.318MHz?

Or would this split us off from the old hands, who can guide us in learning
our HF operating skills?

I doan no why the FCC didn't split us off like they did the Novices.

1227. BQ9P pse note de SE USA

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-08 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <8cnha4mth1@slb1.atl.mindspring.net>
Source record: 21061

BQ9P was 5/5 for 10 minutes at 1330Z on 28495. Of course they were working
by district and when they got to 4's they worked two NC and two VA stations
(on special sked). When
the regular op came back on they called for 5's. K4EA and I called on the
special sked freq. During
5's they faded to just readable. .

Please spend more time on SE USA as we have very short openings!

Howdy, Bob.
I don't think you should encourage this type of segregation.
There's already going to be an initial "adjustment" period,
and setting a specific frequency will aggravate those feelings.
Most of us "learned by doing." We just jumped in and listened
to what the old hands did. That will work for the new guys.

Personally, I think you'll have to deal with a few (very few)
hotheads, but the vast majority of HF hams are going to
welcome the company. The guys who come on yelling "skip land"
and "10-4 good buddy" will either learn and adapt or be
swept aside by ostracism. The guys giving them a hard time
will face the same problem ;-).

Good luck, OM

If you look at my page carefully you will find a comedy routine on the oxymoron, ham sex. If you are a more typical ham (boring) there are references to the best ham sites in the world.
So whether you are a loser or winner, have a life or not, like dx or not there is a place for you on my site.
Please visit my World Wide Web Site, you have never seen a page like it. You will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Hi, sorry I forgot to post it. On the other hand, as you'll see in the description, the "serial number" is kinda meaningless, since this radio's been heavily modified by the Drake staff.

The actual number on the back is 16466, but as you can see from the photos, it has the 5-position mode switch, and as a result of their work, EF184 (6EJ7) tubes.

Thanks for asking.

1262. A ONCE ONLY CROSS-BAND EVENT

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-11 00:00:00 UTC
From: Robert Dixon <robert.dixon@zetnet.co.uk>
Message-ID: <2000041114532169742@zetnet.co.uk>
Source record: 21096

BT Radio Services have announced the closure dates for the United Kingdom's Coast Radio station Service.

Portishead Radio/GKA and all remaining VHF stations will close at 1200z on Sunday 30 April. Portishead Radio first came on air 80 years ago in 1920 and was to become the largest communications centre in the world. It employed over 340 people and was the CW and RT centre for the British Commonwealth.

Stonehaven Radio control centre and all remaining MF stations will close at 1200z on Friday 30 June. The history of the MF service traces right back to Marconi himself.

BT Maritime Services have agreed to run a special cross band maritime/amateur event on Saturday 29th April 2000. The details are as follows: -

Date: 29th April 2000. Time 0700 - 1900 UTC

Call sign Frequency Amateur
Frequency + or -

5 kHz
GKB2 4274 3525
GKB4 8559.5 7025
GKB5 12835.4 14050
GKB6 17113 18075
GKB7 22448.7 21050

There will be three stations operating at any one time - subject to the commercial requirements of the station.

COMMONWEALTH COUNTRIES
Special efforts will be made to beam towards Commonwealth countries at appropriate times. Please e-mail details of which frequency band and time suits your part of the world (e-mail address below)

BT has appointed the Radio Officers Association to handle the amateur side of this operation and the liaison officer is David Barlow/G3PLE.

ALL QSOs WILL RECEIVE A QSL VIA THE RSGB BUREAU.

Contact details: -
David Barlow G3PLE PO Box 50, Helston, TR12 7YQ
e-mail (for this event) dbarlow@u.genie.co.uk
Event Website: http://you.genie.co.uk/dbarlow

Amateurs are asked to note that there will be NO access to BT sites
and following closure and there will be no surplus equipment for
sale. Any enquiries from radio amateurs should be routed through G3PLE.

PLEASE CIRCULATE THIS AS WIDELY AS POSSIBLE INSIDE THE AMATEUR RADIO WORLD.

Good question!

Part 97.111 a) seems to be the controlling legal authority. This would appear
to prohibit
this sort of 2-way communications with U.S. Amateurs.

The above is simply my non-legal opinion!

On the flip side: Do foreign stations work AIR and the like on our Armed
Forces Day
celebrations?

How to Work DX . . . and Other Stuff

By Bruce Muscolino, W6TOY/3
April 11, 2000

This month, I reveal my secret method of working DX! There's no magic involved, except being in the right place at the right time.

I am going to tell you my secret method of working DX and anything else you might want. I just put about 200 DX QSL cards in a box and sent them off to the Outgoing QSL Service at ARRL Headquarters. Considering my station, I felt pretty good. Of course these cards represent several years of operation at W6TOY/3. Of the 200 DX cards, about 150 came from an old logbook and the rest came from this year's ARRL International DX Contest CW weekend.

==========

Of course, you might feel pretty good for having saved the 20 bucks over the several years you could have sent the cards out over, but how do the recipients feel ? (If they're still alive..., ed.)

American amateurs are only licensed to work other radio amateurs with only a few exceptions like the military stations during Armed Forces Day. Also, any emergency communications are also legal.

US amateurs are not licensed to establish two-way communications with other services...such as CB or MARS or land mobile, etc. This would seem to preclude our contacting foreign non-amateur stations. See Part 97.111

nw7us@hfradio.removethispart.org (Tomas - NW7US) wrote:
> Amateur Radio is not "cb" -- not just buying a factory-made, plug-and-play station and pushing the mic key, shouting, "CQ CQ!" While currently in the United States there exists a trend to make entry and upgrade to Amateur Radio privileges easier, there is something this hobby represents that is true for any amateur radio operator, in whatever country s/he resides. We represent our respective countries. We are ambassadors. When I talk with a Ukrainian Amateur, I actually come away thinking, "So that is how they act over there. That's what that country is like."
>
> Amateur Radio to me is an art. The art of communication, the art of language, the art of electronics, propagation, etc. Perhaps that is why CW is so attractive to some people, RTTY to others, and why DXing is so hot to many others. It is more than just making quick contacts and feeling like you did something grand because your 1500 watts made it 3000 miles.
>
> We Amateur Radio Operators are making connections. The human touch. Perhaps making peace and improving the human condition. Could it really be possible?
>
> All of us are part of a large family. This hobby allows us to use technology in a pleasurable way to "reach out and touch someone" (remember that advert?) and make connection. CW is a mode, one of many. I take great pleasure in it. It inhances the experience of communicating. Sexy, some might think of it.
>
> If we wish to encourage the long life and health of cw, or of any mode, perhaps we should nurture the sizzle. This has been said, and said again. We lead by example and through embracing those who choose this form of communication. The result is that more of us humans are

connecting, forming a closer family around the world. No skin color. No accent. No gender. Pure exchange of thoughts and the sharing of common experiences.
>
> I am a single dad, with two sons (11.5 and 13) -- and my life's work is to nurture them into leaders -- men who know the "real deal" and lead by example. Ham Radio is just a channel that allows society to communicate. What we communicate and how is an extension of who we are and what we believe. So my hope is that my boys, and I, exemplify a high standard that impacts the world of humankind with something of value.
>
> Life is simple. Really, it is. And Amateur Radio is not God's gift to the world. But it is a very valuable pursuit. The foundation of this hobby is made in part of the value of life and the respect of each other. Modes of operation in Ham Radio is really insignificant. What we do through these modes is more at issue. CB became the mess it is because those with virtue left it to the lowest common denominator.
>
> I hope to spark the kindling in other's minds. To tempt the non-amateur with the magic and sizzle of crossing boundries and issues, and connect. Be it with dit-dahs or with long-winded chatter.

Anyone who thinks ARRL checks all those contest logs for
accuracy should have his head soaked in sparkling muscatel.
Just like DX logs. In 1997 I added 10,000 points to my November
SS score by adding a couple of dozen contacts from calls
that I had "lifted" from listening. Sure enough, my "hamburger helper'
score was there on the pages of QST in their cheap ink that smudges
when you rub it. What a JOKE.

1273. Not for Canadians, sadly.

Newsgroup: rec.radio.amateur.dx

As interesting as it would be to make a contact with these coast stations, and as keen as I would be to do so, given that I live in a Commonwealth country, I'm afraid I am prevented by Canadian Amateur Radio regulations from making contacts with stations other than Amateur stations. These regulations specify that Amateurs may only "communicate with similarly-licensed stations."

1274. Re: A ONCE ONLY CROSS-BAND EVENT Is this LEGAL for U.S. AMATEURS??

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-12 00:00:00 UTC
From: kh2d@my-deja.com
Message-ID: <38f3dedc.27466068@news.guam.net>
Source record: 21158

97.111 Authorized transmissions.

(a) An amateur station may transmit the following types of two-way communications:

(1) Transmissions necessary to exchange messages with other stations in the amateur service, except those in any country whose administration has given notice that it objects to such communications. The FCC will issue public notices of current arrangements for international communications;

(2) Transmissions necessary to exchange messages with a station in another FCC-regulated service while providing emergency communications;

(3) Transmissions necessary to exchange messages with a United States government station, necessary to providing communications in RACES; and

(4) Transmissions necessary to exchange messages with a station in a service not regulated by the FCC, but authorized by the FCC to communicate with amateur stations. An amateur station may exchange messages with a participating United States military station during an Armed Forces Day Communications Test.

The way I read it, unless the FCC 'authorizes' it, no, it's no legal.

Are you forgetting Armed Forces Day Cross Band Test? Not only do Amateurs transmit in the Amatuer band, they are communicating with NON-Amateur stations!

Also, a "QSO" by convention is understood to be a two-way contact. Broadcasting is one-way.

Part 97 specifically allows certain Amatuer to Non-Amateur contacts for disaster purposes and limited training purposes.

I would encourage this "gentleman" to continue cheating. In another year or two, the increased computer power will make it possible to fully check *all* the logs (and not just the top 50-70%). Seems to me it's been awhile since anybody's been disqualified.....

A brand spanking new "RSGB Prefix Guide" states North Korea. So does DX4WIN!!!!! There is a link to a prefix guide on the ARRL DXCC page. It also states North Korea. I think DXbase2000 has an error.

de Vic, AE5DX

And the FCC can't authorize a foreign station to do anything -- it has no
authority over them.

However, perhaps the Commission could be persuaded to "grant" authority by
letter, so that we who DO have to obey the FCC rules may participate in
what is indeed a once-only event.

1295. Future of Amateur Radio

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-12 00:00:00 UTC
From: "B. Kempton" <kempton@cableregina.com>
Message-ID: <38f4f5a7@204.83.142.253>
Source record: 21179

I have been interested in Ham radio, for quite a number of years, but for various reasons (school, living overseas, and $$$!) I have never become licensed. Now those factors are no longer relevant, but I wonder, now, does Amateur radio have a future. What with the internet and all, I can play chess for example, with someone in Russia as easy as my neighbour next door. Does Ham radio have a future, or will I be embarking upon a dying hobby? Thank you for your thoughts.

Hello Mr Kempton,
Well your question is a fair one and deserves a thoughtful answer. As you may know in 3 days new Morse code testing requirements go into effect making it easier then ever to gain legal access to the HF bands where worldwide communications are a daily thing. The new rule is 5 words per minute for all license classes. I have read just today that Ham radio testing sessions are already swelling at the seams with applicants upgrading and or testing for the first time to be ready for new operating privileges come April 15th. As well testing materials are sold out now everywhere one goes to get them. It looks like there will be a generous increase in the HF ranks this summer and for the years to come. I personally see no 'death sentence' pending for Ham Radio.

Well he was real loud in Seattle on 40 meters at around 1300 utc and listening up for USA on ssb with nobody calling him, so I took the opportunity to "chat" with him. I asked him where are you located and he replied "Ch ongjin". I then asked him " You are in North Korea, correct? NORTH Korea?". And he clearly responded, "Roger, roger." Then he started listening for JAs down the band and created a monstrous pile-up with them. They should be able to figure out if he is legitimate by turning their beams? Any JAs out there reading this that can corroborate? 73 and GL, de John, K7JY.

Have heard that the way to get a card from 3V8BB is to QSL direct to the operator. Does anyone know who the control operator was during the WPX DX. Have not seen this posted anywhere. Any thing would help.
Thanks.

K7SAM

If you go to the DX Summit Web site, and search on HM0DX, there are a
bunch of comments in the spots such as "not Korean accent" from a
South Korean, and a few comments from JAs with wrong beam headings
(one says 90 deg, other says South). For what it's worth...

The first two-way across the Atlantic was conducted according to a
pre-arranged schedule.

The distance is still covered, regardless of the existance of a list or
not.

YU DX Contest

Yugoslav radio-amateur organization (SRJ) and Yugoslav DX Club (YUDXC)
have the honour of inviting amateurs from all over the world to take part
in the YU DX Contest.

RULES FOR NON-YUGOSLAV STATIONS

1. Contest period:

Each third FULL weekend in April,
from 12:00 UTC on Saturday until 12:00 UTC on Sunday.
In 2000, YU DX Contest will be held on the 15th and 16th of April.

2. Bands and Modes:

All bands from 1.8 through 28 MHz, except WARC bands,
CW and SSB.
Avoid using the DX portion of the bands. Cross band/mode contacts are
NOT permitted. The same station can be worked both in CW and SSB on
the same band.

3. Categories:

A - Single Operator, CW
B - Single Operator, SSB
C - Single Operator, MIXED (SSB/CW)
D - Multi Operator, MIXED, Single Transmitter
When changing the band, category D participants must operate a minimum
of 10 (ten) minutes on the new band.

4. Exchange:

RS(T), plus number of your ITU zone.

5. QSO points:

QSO with station from your ITU zone - 1 (one) point.
QSO with station on your continent (not your ITU zone) - 3 (three)
points.
QSO with DX station - 5 (five) points.

6. Multipliers:

Different ITU zones and different Yugoslav prefixes on each band count
as
multipliers.
Same ITU zone and same Yugoslav prefix may be counted as a new

multiplier only once per band, irrespective of the mode.

7. Final score:

Total sum of the QSO points from all bands, multiplied by total sum of multipliers from all bands.

8. Log instructions:

a) All times must be in UTC;
b) All sent and received exchanges are to be logged;
c) Indicate a multiplier only the first time it is worked on each band,
regardless of the mode;
d) Logs must be checked for duplicate contacts, correct QSO points and
multipliers. Submitted logs must have duplicate contacts clearly shown;
e) Entrants are encouraged to send logs on diskettes, or to email the
logs via Internet to yu0srj@beo.ampr.org
IBM MS-DOS compatible diskettes are recommended. Logs should be send as ASCII files, or you can use K1EA's CT program, version 8.45 or higher - use the option for IARU HF CHAMPIONSHIP CONTEST;
f) Use a separate log-sheet or computer file for each of the bands;
g) Each entry must be accompanied by a summary sheet (on paper), showing all scoring information, station description, contestant's name
and address in BLOCK letters, and a signed declaration that all contest
rules and regulations for amateur radio in the country of operation have
been observed;
h) More than 2% unmarked duplicate contacts in the LOG will be a sufficient cause for disqualification. For every unmarked duplicate QSO,
3 (three) previous contacts will be deleted;

9. Deadline:

All entries must be postmarked no later than 30 (thirty) days after the
contest. Indicate YU DX CONTEST on the envelope.
All logs should be sent to:
Savez Radio-Amatera Jugoslavije
YU DX CONTEST
P O Box 48
YU-11001 BEOGRAD
YUGOSLAVIA
or via e-mail to:
yu0srj@beo.ampr.org

CRITERIA FOR TROPHIES AND CERTIFICATES:

1. TROPHIES
a) Winner's cup (or plaque) in each category for NON-YU stations;
b) Winner's cup (or plaque) in each category for YU stations.
2. CERTIFICATES
a) Top three contestants in each category for NON-YU stations and
top
three contestants in each category for YU stations;
b) Every station which completed more than 250 contacts, including
25
different YU stations.

WE HOPE TO SEE YOU IN THE YU DX CONTEST!
Savez Radio-Amatera Jugoslavije & Yugoslav DX Club

- - - - - - -

Hope to meet you!!!
(Let me be your 251st qso! :))))

Best regards,

His English has strong Japanes accent.
His beam heading, although not unanimous, does not seem to indicate N. Korea.
Investigation among HL/DS stations based on local skip seems to indicate
that he is located somewhere near Seoul in S. Korea.
So, ONE possible scenario is a Japanes guy in somewhere in Seoul or
in an island in mid-part of S. Korea is having a lot of fun.

I'd bet my $1.00 that he is NOT in N. Korea.

Hi

Hope someone can help me out here. I looking for a site where I can se the optimal snailmail way to those exotic DX'ers.

As an example I have sent a QSL to VR6BR on Pitcairn Isl. On the envelope I just wrote name, Po Box and then *Pitcairn Isl*.

Later a friend told me, that snailmail to Pitcairn Isl was faster and safer if I wrote *Pitcairn Isl, New Zeeland* because there was direct mail route between P Isl and New Zeeland.

If I wasn't told I would newer know where to look for those QSL tricks.

Do you know of any interesting sites regarding that issue ??

Per,

Unfortunately, Jukka is leaving Pitcairn for good in a few weeks. VP6BR is via the home call sign OH2BR.

As far as the best source for QSL routes, there are many...depending upon how much you are willing to spend. There are newsletters, such as the DailyDX and 599RPT. The 425 DX Report has a free website. The Ohio/Penn DX bulletin is also free via e-mail.

My own opinion is that the GO-List has the best routes for DX stations. It is available on the Web and on some packet networks.

Of course for your run-of-the-mill DX stations and addresses of managers, you need the Flying Horse, QRZ, or Buckmaster CDs.

I hope this helps some.

And I'd bet $100 he's not Japanese. He doesn't sound like the 27,345 JA's I've talked to on HF, nor does he sound like any of the Japanese people who live in Guam. He's very strong here (when he's not beaming Europe) and the beam heading is the correct direction from Guam. When asked, he said he was Chinese, not Japanese.

Anyway, real or not, why worry about it. If you want to work him, work him. If you don't want to work him, go work somebody else. Just don't be like the morons who feel they need to discuss prefix allocations and the fact if he is 'real' or not on his transmit frequency, in between calling people who do want to work him names.

North Korea sure seems to bring out the worst in ham radio. Or maybe it's the DXCC award that does that......

Well Jim since you asked one of the reasons Martti gave was that HM0DX gives out a PO Box in a North Korean city for his qsl address. Martti has been there twice and says that N. Korea does not have a PO Box system. That was one of Martti's reasons.

As I understand it the discount is equal to the amount paid for a VE session. This is most likely because of the fact that most upgrading hams paid that fee once in the past couple of months and will paying it again for paperwork submission only after April 15th. Thus it is really a rebate from the ARRL. Besides, what is so wrong with welcoming in and rewarding new or upgrading hams? It is this attitude that has probably driven away more new or possible hams than any cw test ever did. Think about it!

Jim et al., What's interesting about this HM0DX op is the mystery about it. He's on at very regular times, on 40, 15, and 10. He has been operating daily for several days, for long hours, in the same manner, which is not typical of most pirates (at least the ones I've contacted). He is consistent with his qth qsl info. For some the beam heading is right, for others not (and this is true of JA ops as well, who are very close by). His accent doesn't sound Korean or Japanese to some, but is ok to others. He does sound Chinese to my ears (I have travelled extensively thru PRC). He is clearly an experienced DX operator, handling pileups with skill and aplomb. He gives his qth as Ch ongjin, and supplies a box number there for qsls (so somebody is going to get a pile of cards, probably with $ or IRCs inside!). Whether he is real or not, he certainly is interesting. My curiosity is piqued. If this guy is a pirate, he is one of the most sophisticated ever (comparable to that fellow Romeo ? a decade ago). And you're absolutely right; people should stay off his transmit frequency. At least give him a chance until it's proved that he's a fake or not. 73, John, K7JY.

Attitude means nothing in the real world. If you wanted to step inside ham world, you'd do it anyway. Nothing is wrong with rewarding someone who "WORKS" for it (not that a published Q and A constitutes work- you'll have to trust I didn't memorize 5 elements like a loser does). [insert sour grapes/ why do we have to because you did crybaby CRAP here]

In order to avoid having people be screwed without knowledge of what they're getting into, I took the opportunity more than once to pull out the ham catalog and let the visitor laugh their formerly interested ass off at the pricetag on anything other than a 2 meter CB.

Then, to solve that problem, I put on the 2 meter CB (or packet when I had it), and let them listen to the buzzards spin around and around, chasing their beaks in an infinite spiral that makes the Greeks' Oros look comprehensible.

So you see, the problem with ham radio is the "Three P's"

1. The Prices
2. The People on air
3. The People who then point out the above (otherwise known as telling the truth, as others did toward me, when I was first licensed)

I would agree. They can't even afford food, and no civilian over there would have a HAM. And any military site wouldn't be up doing things like that due to all the direction finding and artillery targeting going on every day.

No way he's NK. He's just fking off with a call sign no one else would use.

1349. HM0DX - what's his home call?

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-14 00:00:00 UTC
From: slay@hevanet.com
Message-ID: <8d8a0j$c4q$1@glisan.hevanet.com>
Source record: 21283

What do we know?

1) He speaks fairly fluent "ham radio" English
2) He "sounds" Asian ... not Korean/nor Japanese; claims to be Chinese
After 15 years in Japan, I'm accustomed to the accent.
3) He knows the jargon "Fox Tango 101", "QRNoisy"
4) He has consistently good signals (claims a 4 element antenna)
Probably does have a reasonably good antenna system; but nothing
on 20 meters. "Only 40/15/10 meters"
5) His SSB pile-up technique is superior ...
he even sounds like OH2BH "five-nine, thank you" for each QSO
he NEVER has gotten flustered or angry with the pile-up
he knows how to operate split efficiently; and DOES NOT spread
everybody out.
6) He is a very skilled CW op .... and uses a keyer well (per my QSO)
7) His signal comes from somewhere in the general (NE Asia) vicinity
8) He answers questions like "what's your rig/antenna?" and he agrees
to switch to CW on short notice.
9) He does not seem to be coy at all.

What can we surmise?

1) He's probably got quite a bit of ham radio experience already
2) He's not near any major metropolitan areas in HL/JA ... otherwise
locals might figure him out
3) He probably has considerable contesting or DX-pile-up experience;
after all ... rookies, even with BIG stations aren't that good.

What QUESTION(s) should we ask next, to him?

1) What is his home callsign?
IF he is Chinese, he's likely operated from a BY club station.
So, which one?

IF he is a SLIM, an he may well be ... he deserves kudos for demonstrating
how to handle pile-ups. :-)

The following is extracted from the 425 DX News DX Information editied by I1JQJ and IK1ADH date 15 April 2000, No. 467

"HM0DX ----Kim has been signing HM0DX for a few days in a row and Bernie McClenny, W3UR, Editor of the Daily DX, has asked Martti Laine, OH2BH (P5/OH2AM and P51BH) to express his opinion on this activity: "Chongjin, which is his P.O. Box city, is indeed a real city on the Norhtern side where South Koreans can access as a group of "seriously guided tourists", Martti says. "Every step is highly monitored and it would be the greatest breakthrough for South Korea to be able to take a radio in at this time. Furthermore, if it is a South Korean, Mr. Kim, why would he have QSL address in the North? Also, the North Korean postal infrastructure does not yet have P.O. Boxes." It should be added that both South Korean and Japanese amateurs indicate a wrong beam heading. (End extraction)

Although I've sent hundreds of QSL cards and most seemed to arrive OK,
I've always been puzzled by the proper way to format the information.

For example -- here is what the RAC callbook comes back with:
Pete Harris, G0WUA
1 Newlands
Landkey
Barnstaple
Devon EX32 0NJ
Great Britain

Thats six lines of format where mine would be only four lines:
Rodney R Dinkins, AC6V
4982 Marin Dr
Oceanside, CA 92056
USA

Is there as easy way to determine what goes on what line?

How about this one?
Stepan Martinek, OK2EC
Zizkova 14
CS-69501 Hodonin
Czech Republic

Does the comma in the RAC format indicate a new line??

Or maybe just address them as they come out of the RAC??

> You're like a puppet. You'll get shriller. I control the strings.

Not defending Dave, he can defend himself, that's one

Cross posting to DX whenever it concerns DX and besides, you told me it was OK. You gave your royal permission and who am I to deny the King Aholelio and you yourself have stated you are the DX king, so care to prove it That's 2

As to name calling, only if it were such. But the names befit you and what you perceive as a personality, so that's not 3

BUT

you respond direct to me, yet I am supposedly killfiled and I get to yank your chains whas up with that??

The only string you control is for that bell that I ring to get you to perform like a trained monkey

That's 3

YOU'RE OUTTA THERE

ring ring ring
this is just too easy

For the first time since the Korean war (which never really ended)
both Korean presidents will meet. South Korea made the offer, and
the north immediately accepted.

Welp Steve, since I'm using Netscape, I cannot kill file you. Where do you get your misinformation? That's one.

Yes, you -always- resort to name calling. You cannot help it - it's who you are. That's two.

I never said that I was DX King, so of course you're making false statements. That's three.

I don't control which groups you choose to SPAM. If you think this is DX material, then you're a fool, and that's more than enough.

I'm yanking your string and you're dancing for me, little Pinnochio.

Again the double standard concerning Dave contacting bootleg F-land stations on 6M. If you were any more predictable, you'd be a silver dollar with two heads. Hahahaha. Too easy.

Wanna try it again, little Pinnochio?

Funny how you're name calling isn't Poor brain, sitting on his head too
much, got a charlie horse tylenol might help, midol certainly would

>
> I never said that I was DX King, so of course you're making false statements. That's
> three.

Quote the King, I have worked 100's of Eu's as the DX. I know of which I
speak. I know that anyone paying to have a qsl card sent to them is
breaking the law. Sound familiar, Morgan wannabe?? Gee this is too
easy

Except the context was Dave working Fland contacts on 6, since he is the
DX, they'd work him. Learn to read little wooden head.

>
> Wanna try it again, little Pinnochio?

wanna bet you can't let this go?? I win

BTW doofus, I dis-invite you to have BBQ shirt ribs at Dayton. You and
John K can go pound salt together. MAybe Morgan will show and you 3 can
have a circle ..... well 3 jerks in 1 place , the word would have to
end

ring ring ring Herbert

Made it!

Strangely enough, with the help of the Cluster. W2GG spotted VP6BR, up to his strange practice of running CW on 3799 QSX down 8. Worked him, first call, despite serious QRN. #100 on 80m! (now to collect the QSLs...)

(does anybody know *why* VP6BR is running CW way up there?)
(does anybody know why people keep piling on HM0DX even though all the information I have says he's a Slim?)
(how about a QSL route for 9N7RB - nah, I'm being lazy, haven't looked him up anywhere yet...)

1367. North Korea - What's the deal anyway?

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-15 00:00:00 UTC
From: Peter Lemken <plemken@gmx.de>
Message-ID: <8d8j8o$7d34e$5@fu-berlin.de>
Source record: 21289

Looking at all the comments, I appreciate that North Korea is #1 on the Most Wanted DXCC-List.

North Korea is a piss-poor country, poorer than any African state, since no citizen is allowed to flee the burden of their fate.No observers from the outside are allowed to look into everyday life of the people, ruled by a communist regime with a hard on for the military, people starving like flies and the government living like royals.

You wanna get North Korea on the air? Go to your local Human Aid organization, raise money for food, preferably millions, go to Pyonyang, talk to the officials and offer them aid. Tell them: No license, no aid.

Hurry up, since there ain't gonna be a country called North Korea in two years. Hurry up to work a soon to be deleted country.

There are direct commercial flights from Berlin to North Korea once a week, so I'll volunteer as CW-Operator ;-)

I am sorry, but I was led astray on that one. Had someone tell me he talked in a good position to judge the whole thing and believed him. Met the guy in person tonight and it turned out it was "I talked to him and he told me that he talked to someone one els who has heard tht"... You get the drift. Martti's statement that there is no such thing as PO-boxes in NK makes me believe that either someone in NK is getting rich by collecting the money for the direct QSLs or that he's a slim. In any case, I have the feeling that none of those who worked HM0DX will ever receive a valid QSL-card.

Anyone willing to sponsor me with real bucks to get North Korea on the air *legitimately*? All it takes now is money for this pretty much fucked up country.

1370. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8d8ql4$5oj$1@news.hawaii.edu>
Source record: 21292
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.digital.misc

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hi

Tnx for all the information I have received on this subject.

My problem is basically that I had QSO with VR6BR back in 1991 but I newer succeeded receiving a QSL Card back then. I mailed it directly to Pitcairn.

But before I'm going to try the same route again I was just wondering how to get more succes this time/in the future (the classical problem ;-)).

Don't bother using it.

Try a sound card and Writelog, you can use real FSK and no bother
setting up modems.

now you're taking to answer your own posts? What a Herbert. But as the
master DX'er, you'd know that it is (as you have so eloquently stated
many times) up to the person working the DX to know his band limitations,
not the DX yourself. I am sure you've run into this scenario when you
were working the pile ups on 20 meters. SO tell us how you handle those
that are out of band. Do you use the Internet to check each callsign?

What type of run rate does that give you Herbert?? Maybe 3 or 4 an hour

What a dillweed. So come on Pinky, tell us you're fascinating DX stories. How about the time you worked 3y or perhaps you got the possible North Korean. What are your secrets dimbulb. Maybe you and Morgan can share the good buddy time you've spent on 30 meters

so line up and sign up today Shoes for industry

I know I don't have any trouble remembering five-digit codes. The new 9-digit ones are somewhat more difficult. But the last four digits are not cumpulsory, and mail will be delivered reasonably quickly without them.

My zip code is 37146-8098. 37 and 38 are assigned to Tennessee, and 371 designates a general rural area surrounding Nashville. (very generally though, it covers a LOT of territory!) 37146 designates the area served by a specific post office. (including that zip technically makes the mention of the town unnecessary, though it's virtually always used. Actually, I got my census form a couple of weeks ago even though it had the *wrong* town, since it had the right Zip code..)

I will admit to being unaware of exactly how small an area the 8098 part denotes, but it must be fairly small since Pleasant View isn't that big of a town! When someone has a post office box, the last four digits are the same as the box number - so if my address was Box 73, Pleasant View, then I could be fully addressed as "37146-0073, USA". Not that I'd recommend trying it.

Back when I was on Compuserve, my email address was 72777.3143@compuserve.com. Of course, 72777-3143 is also a valid Zip code. Some people saw the email address at the head of a column I write, and decided to use 72777-3143 as my Zip code. All that mail arrived by way of Fayetteville, Arkansas. (now I know where Zip code 72777 is!)

It was reported in the early 1950s that a Polish station addressed a QSL card to "W6MVW, USA", and it was promptly delivered.

Sure, no problem. The only things read by an automatic system is the
postcode. The address is read by a real breathing human; they'll work it
out.
My (XYL's) relatives in Guernsey have some *very* interesting addresses.
Houses have names, not addresses. My sister-in-law's address is

Person Name
House name
Lane name
Street name
Parish name
Guernsey GYx-xxx
Channel Islands
Great Britain

Makes for long address labels from the US unless you combine things ;-)

1386. FS: National NCL-2000 Linear Amplifier 2000 Watt Amp

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-16 00:00:00 UTC
From: cbatterman@attglobal.net
Message-ID: <38FA945D.B3628239@attglobal.net>
Source record: 20908
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.boatanchors

This National NCL-2000 linear works flawlessly. It was rated for 2000 Watt input on 80 -10 meters. I measure 1500 watts DC output with my Bird wattmeter. Comes with a spare set of 8122 tubes and original manual.

The amp is in nice condition. Front panel is near mint with only some wear on the rocker switch lettering. Cabinet has a rub on the left rear and a few small scratches on the trim ring. Everything appears original inside and out including the paint.

This is my favorite classic amplifier. (and I've owned a lot over the last 30 years) You can drive it with anything from 20 - 200 watts, solid state or tube. Tons of gain. Works like new. $695.00 including extra set of tubes.

Thanks !
Chuck, W6CAB

Eh? I wouldn't say it was a case of right or wrong, merely different. A
comma is merely a means of putting two parts of the address on the same
line without any confusion.

Anyway, it is not necessary to understand the exact makeup of a foreign
address - all you have to do is copy it!

It is theoretically possible to mail some one in the UK with their name and

post code, followed with the contry name. The OX32 0NJ part of the address, then United Kingdom or Great Britain or G.B. Try it sometime.
As long as you know that the code starts with, usually, two letters followed by a number (sometimes two), then a space, followed by another number and then two letters.
The first two letters correspond to the town (city) and the first set of numbers to an area of the town, next, after the space, the street or road name (part of it, if it is a long road/street) is represented by the last (usually three) charactures, (usually a number followed by two letters). The actual house that gets the mail will depend on the post man or post office knowing the name of the people living at the post coded address.
As you thought, the comma denotes another line in our old fashioned way of address. This is another way that you have made your system work better that the one your ancestors left behind..
Oh well, something you get right, most things we get wrong

Oh, you're a real puppeteer alright. I don't need anyone to defend me, Brian. I had no idea of what France's regulations are regarding the 6m band. It is no more necessary for me to know about French amateur radio regs than it is for you to know the regs in Tanzania.

To my knowledge, I worked no bootleggers; only licensed hams operating outside their band limits (if the French poster's information is correct). As long as I'm operating within MY regulations here and I hear a fellow calling me using an amateur callsign, I'll work him. Use your noggin for something other than a spacer for keeping the headphones from touching each other.

Hi Rod,

From the address you provide as an example, the following are the bare essentials -

Pete Harris
1 Newlands
EX32 0NJ
Great Brittain.

Newlands is the name of the road or street or possibly the house. Pete lives at number 1. That's there to help the postman.

The postcode is sufficient to define whereabouts in Great Brittain the road or street or house is located. In the example EX is the code for Exeter, the nearest large town or city which has a head postal sorting office. The remainder of the postcode defines the district and sub-district within the Exeter postal area.

However it is not safe to use just the bare essentials. It is easy for the sender to make a mistake when writing the post code. And many people have difficult-to-read handwriting. So a little redundancy in the form of the name of the village and name of the Exeter suburb, is a good thing. The letter will then arrive even if the postcode is entirely missing.

Screw off, the prices of ham equipment are MUCH lower than when I came in in
1959 adjusted for inflation.

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)
K1OIK Bacteria-the only culture most hams have

If you really want to get it right, go to http://www.royalmail.co.uk
and check the Postal Address File, which says in this case that it's:

1 Newlands
Landkey
BARNSTAPLE
EX32 0NJ

If you need to fold this into fewer lines, I suggest that you leave
the Post Town (Barstaple) and the post code on just one line and cram
everything else anywhere you care.

The word Devon says in which county Pete lives, but the names of
counties and unitary authorities have no place in postal addresses
unless the word also happens to be the name of the Post Town.

Regards,

But it does beg the question, is it acceptable to accumulate more than
one item on the same line? For example, could I write G0WUA as

Pete Harris, G0WUA
1 Newlands, Landkey
Barnstaple, Devon EX32 0NJ
Great Britain

??
Many mailing labels can't accomodate six lines of information in
commonly-used fonts.

Welp my little wooden headed Pinnochio, now that I know the no-code JAs are limited to domestic
contacts only, I'll avoid them. Its called learning, which causes a change in behavior.
Unfortunately I haven't carved you a little wooden brain yet so we cannot expect you to learn
nor change behavior. You'll just have to live with being stupid and ignorant, my little wooden
headed boy.

Well, wait a minute. So, a *licensed* ham is operating outside his/her band limit and THAT's OK? am I misunderstanding something here? I'd call a licensed ham deliberately operating outside their band limit a TRUE LID. At least one can presume that a non-licensed person doesn't know any better.

Hi All

Is there software available on the Net that I can use to show me the
following:

Grid locator
Call Area example ZS1, ZS2, ZS4, ZS5, V51 ect ect
Beam heading

Would appreciate any information.

Thanks in advance.

> > Shame on you.

How does one tell, in the environs of a pile up whether or not the
station calling is within his band limits? That's been the contention
Kim, not the other way around. If you call me in the 75/80 meter dx
window and I answer, how do I know you are operating legally? Do I shut
everything down and check all databases to look up your call? Do I
assume that because you called me, that YOU are operating within your
band limits.

If the dx is working the pile up, there has to be some understanding that
those calling the dx are working legally. The contention from the "other
GUISEPPI" is that it is up to the dx to establish the legality of the
operator calling him/her is absurd, at best

Do you know the operating regulations of every country? Why should
anyone. GUISEPPI didn't and therefore was a "guilty" as Dave in his
supposed working of nocode JA's. When you talk on the repeater, so you

check the callsign of every contact? If not, you are as guilty as both
Dave and GUISEPPI for not knowing to whom you were talking to

Yes, and so you now see the Steve/KF2TI double standard. He attacks me for having worked no-code JA's who presumably may make only domestic contacts (according to the japanese fluent KH6O), and blesses Dave's actions with holy water.

Watch how shrill Steve gets on this.

> all along appears to be ture....bye Dave.

I think Dave was unaware that there was a problem. He's probably checking on it now. If the information is confirmed, I suspect that Dave will no longer come back to F-land hams that call him below 50.200. Perhaps Dave will jump up above 50.200 ocassionally so that the F-land hams can work him (legally). Learning really does cause a change in behavior, something completely lost on my little Pinnochio.

On the other hand, my little brainless wooden headed boy will defend Dave to the very bitter end, getting shriller and shriller and shriller. Just watch - so predictable and soooo easy.

Poor brainless Brian. Trys harder like Avis, but never quite succeeds. Insists he the GUISEPPI from Pinnochio, pulling the strings. Wouldn't take the hint to do a little research, so I guess I get the last and best smack upside his tiny brainstem

Try this Brain... Pinnocchio's father/maker was GEPPETTO not GUSIEPPI

All this time I thought he was playing at being this stupid. Guess I was wrong, he really isn't playing, he is this stupid.

Nice try though. Going through all this to insult someone and not even getting it right.

Oh well. Seems Dave is on 6 meters, below 50.2 and all I hear are NoCode JA's trying to work him from F-Land. Here Brian out there screaming his last 2 on 10 to a W6 Beacon...wow, can't get any better than this

Oh yes, in the file, additionally are

Vince and mf luder. All perfect companions to one who hasn't got things quite right. Look for GUISEPPE Burke coming to a Bellevue near you

all for now. back to the dx already in progress

But you said that Dave knew what he was doing when he did it. Now you say that
Dave didn't know. Which is it Steve? Which side are you talking out of today?
This minute?

> If the dx is working the pile up, there has to be some understanding that
> those calling the dx are working legally. The contention from the "other

> GUISEPPI" is that it is up to the dx to establish the legality of the
> operator calling him/her is absurd, at best

Your assertion is absurd at best. If Dave is able to confirm that the F-land hams are not allowed below 50.200, I suspect that Dave will not come back to F-land hams when he is operating below 50.200. I also suspect that Dave will spin the VFO above 50.200 to accomodate the F-land hams. Dave's that kind of guy.

But not you. You will smear my good name for having unknowingly worked codeless JA hams that presumably can make only domestic contacts on HF. Then when the same thing is pointed out about Dave's operation - YOU BECOME VERY SILENT - other than to continue attacking me. Thats called a double standard in anyones book.

> Do you know the operating regulations of every country? Why should
> anyone. GUISEPPI didn't and therefore was a "guilty" as Dave in his
> supposed working of nocode JA's. When you talk on the repeater, so you

> Dave and GUISEPPI for not knowing to whom you were talking to

You're being absurd again, although it does seem that you are trying to shed the SHRILLNESS. Congrats. Keep it up. Someday you may make it into the boundaries of a reasonable person.

Anyway, if you KNOW what the other countries band limitations are, then you would be a fool to intentionally be a party to a violation. But then, thats you.

Like on 160M. Real DXers know what countries are allowed on 160, what their operating priveleges are, and when the grayline passes over, they are planted on those freqs and modes trying to get that country confirmed. And when a new authorization is made somewhere out there, the Real DXers are there to greet them.

But I forgot, my wooden headed little boy, you're not a Real DXer. You only pretend to be one.

1413. Steve again

Just an FYI; the postcode EX32 0NJ covers #'s 1 through 12 Newlands,
Landkey, Barnstaple.

See: http://www.afd.co.uk/PcLookup.htm

So, you should be able to address it as:

Pete Harris, G0WUA
1 Newlands
Devon EX32 0NJ
Great Britain

The full post code is somewhat like our ZIP+4 here in the U.S. BUT, the
U.K. system actually give the addresses [and sometimes house names] for
the post code.

Cheers

Leo - W3LEO & MM/W3LEO

Kim,

This is simply another occasion when you haven't the slightest idea of what you are talking about. You always have an opinion whether you've thought out the the idea beforehand or not. That's certainly "ture".

Dave 5H3US, K8MN

You obviously don't live out in the country!

If you want to cut it down to an absolute minimum then:

1 Newlands
EX32 0NJ
UK

should find him.

Pete Harris, G0WUA
1 Newlands
Landkey
Barnstaple
EX32 0NJ
UK.

Would be better. You could delete Barnstaple as EX32 is probably
Barnstaple, leaving 5 lines.

You'd need the house number, Dave! The post code only goes down to
streets/roads etc.

Yes. You could do that.

Even if the label had become illegible apart from
the call, they would try to find out who G0WUA was.

In country villages, the postcodes and house numbers are often
redundant as everyone knows everyone else anyway.

It can be slightly tricky for a foreigner, but it's really not something
you need to worry about. You can reduce the number of lines ok if you
add a comma at the join - I'm sure it will get there fine.

This has to be the shortest:

Within the US:

96830-0282

will come straight to Hawaii, then into my PO box.

Outside the US:

HAWAII 96830-0282.

In either case, one line suffices!

the English version does not, but then again, it hasn't been updated
since 1996 and there have been changes to the license classes

Next time you talk to a JA who has knowledge, ask his/her. The rules
were updated in late 1996/early 1997. It has to do with the fact that
having no code, they are not in compliance with the various treaties.

It was a hot topic at last years DX dinner at Dayton, which several
members of the JARL attended. It is from them that the information was
gathered. It is common knowledge amongst the Japanese that Class 4
licenses are essentially their form of CB.

Several years ago it was addressed in the JARL newsletter

Post zones are not necessarily Cities, They can be fairly large
geographical areas. In the UK, "PH" which is Perth, covers from Perth in
the east of Scotland to Fort William in the West. PH + 33 is the sub
zone I live in, this is then divided into smaller areas by a space then
a number and two letters. Other Post Code areas may have different
multiples of Letter/Number combinations. Most Post Code groups cover up
to ten addresses in a block.

Example (from prior posting)

1 Newlands..... = 1 EX32 0NJ in theory this is all that is
required for mail to reach the intended recipient address. More than one
person at an address? add a name. If posting from outwith the UK, mail

should also have the Country designator after the "POST CODE///ZIP CODE"

You've had some good advice Rod, but since I only live about half a mile
away from G0WUA (I don't know him, and have never seen his antenna), my
local knowledge might shed some light. As others have said, rural (as
opposed to city) addresses can be long for historical reasons - i.e. pre
post (zip) codes. What is odd is that although the postcode defines the
address reasonably accurately, its use does not seem to have in most cases
shortened the address. To put you in the picture, Newlands is a housing
development, Landkey is a village about a mile out of Barnstaple, and the
county (Devon) is nowadays usually deemed to be superfluous in the address.
I live in a little hamlet of about 6 houses, and to my knowledge we all
share the same postcode EX32 0NY. EX stands for the county town of Exeter,
and 32 defines the district (EX31 is Barnstaple and some way west).
I don't know how precisely the US zip system defines the destination, but
one thing in favour of our system, is that I imagine most people find it
easier to remember an alphanumeric code than a strictly numeric one.

As I later pointed out, it depends on the Post Office knowing their
customers. We have all heard tales about a letter/post card getting to it's
end location with only a description of a person or location. I think, that
for the cost of a stamp, they do a great job.

1429. Three ARRL Publications Reviewed: Part the First

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-17 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <8ddotq$68m$1@nnrp1.deja.com>
Source record: 20913
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

Well, as some of you might have gathered, I recently read [juveniles insert "Duh-huh, you can read ? Duh-huh Duh-huh HI HI" here] three great ARRL publications, which I made the mistake of buying outright.

DXing on the Edge, the Bore of 160 meters- 100 some odd over priced (small size) pages with a CD of Jeff Briggs playing DJ for the ages on an aluminum alloy wafer coated in plastic.

The best thing in it was the snapshot of K1ZM's multi million dollar "summer home" on a private island in Massachusetts. And that was ont the damned cover. I wonder if he'll stop off at ARRL in between and make some SSA Units ? I'm sure he needs the 800 bucks a month...

One word- BORING. It comes wrapped AND LET THAT BE YOUR FIRST WARNING. NEVER BUY A BOOK THAT'S WRAPPED UNLESS IT'S THE TORAH, KORAN OR BIBLE AND YOU KNOW WHAT'S IN IT ALREADY.

What university did this guy go to ? Was he never taught not to engage in endless chronolgy of his subject ? God help me to find even a shred of interpretation of the meaning of any of the events depicted, like the play-by-play of every jerk who ever got a 160 meter DXCC.

Although one must give W1BB credit for doing it with 100 watts. Maybe the 2000-era DX monkeys could learn from his mistakes... er... success.

K1ZM is nothing if not a self centered, egotistical author. Imagine the fine art of including yourself in the chapter on the most memorable contacts of "great" 160 m operators.

I'd think Marconi would like to call that. Or even Armstrong of Sarnoff. They'd be unbiased. Not an author writing of himself.

I wonder if K1ZM thinks a Phi Beta Kappa key is a Greek tool to send CW, since he appears to be not too much of this world...

Further, K1ZM's "sharing of the tips and techniques" of 160 success that ARRL trumpets is limited to some common sense knowledge about DXing in general you can find on contesting.com (I paid 28 bucks to read "Listen, Listen, Listen" ?). Oh yes, and four highly technical antenna desgins you won't find anywhere else: four square, inverted L, phased verticals and that technical monster- the ground plane or vertical.

As for his discussion of receive antennas, it was one big ass ad for ICE matching transformers (run by a comrade in arms of Zero Musing). Find better descriptions in US Army field manuals.. and for pennies on the dollar.

Don't waste your shelf space on this one guys and, well, more guys...

Sent via Deja.com http://www.deja.com/
Before you buy.

I once sent a postcard to my chum Chris G8DWT (later G4CCC), and
couldn't remember his house number or postcode. So, I addressed it to
"the house with the great big TV aerials on, Wincroft Road, etc. etc."
and it got there fine.

The "great big TV aerials" were large beams for 2m and 70cm!

Well Charles, Usenet has SPAM policies and sending the same message
twice a week to a dozen newsgroups isn't going to get you any more
web page traffic - it's only going to bore us to death and might even
get you on the list..

If you want more web page traffic, you have to put something there
that makes people come back - contrary to popular belief, there isn't
an endless supply of hams on the internet.

I looked at your web page, nice job with the graphics. But there
wasn't anything there that warrants you constantly reminding us to
come back..... work on the content and the traffic will take care of
itself.

Agreed! When I moved a distance of a few miles 3 years ago, my old post lady used to give any mail addressed to the old place to my new postman at the sorting office, she was a dear! (Even though one of he dogs "likes" her..)

BTW, has anyone noticed the Zip codes that appear on a lot of mail nowadays?
Mine is 90774, is this a replacement for the postcode? If so, where can I look it up?

Thanks for the compliments Jim, There is active content that changes daily. One is my online logbook which has new entries everyday. Another is the Free-for-All links page which has new links daily. I also have public site stats that change all day long so there is plenty of changing content that would warrant repeat visits and repeat reminders on Usenet.

Thanks again for the nice words......

I have a pair of brand new Eimac SK-416 chimneys FS. Not listed at Richardson or Eimac. What tube do they fit? I also have a good, smaller Eimac tube with the marking worn off. Only "8645" is still visible. Is this a 4-400 or what? I can't find that number listed anywhere. Both are FS. Chimneys $50/pr. toomuchstuff@pobox.com

No, it's a Mailsort code. Businesses get a discount if they give
bulk mailings to the PO pre-sorted by mailsort. The resolution is
much coarser than the postcode.

> If so, where can I look it up?

Sign up your business for the service and they give you a
free database. http://www.royalmail.co.uk.

1441. First step

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-17 00:00:00 UTC
From: Searoy <searoy@earthlink.net>
Message-ID: <Z1KK4.37297$y4.1354452@newsread1.prod.itd.earthlink.net>
Source record: 20925

Good Morning,

This weekend I took the first step in getting my licensee. I bought a study book. This morning I took the second, and downloaded a code-learning shareware program. Since I want to do some DX mainly, I decided that Novice is the place for me to start, and maybe even jump right into T+.

I have lurked on here and other HAM newsgroups and heard more gripes and flames about code/no-code. I don't really care how it used to be. It's time to move forward. It's personal choice. If I choose to use code, then I will. If I choose not to, I won't. It will be a day to day decision for me. No code-speed test will determine whether or not I use it. Folks who do not want to talk to me will not slow their code. If I want to send fast code, I guess I had better practice it. I guess if I am not going to use code there is no reason to improve, or even keep up speed. If I use code often I expect my speed to increase naturally.

Other interests include packet and OSCAR. I have only begun to scratch the surface. I'm looking forward to calling late into the night. By the time my little girl is 5 she'll know code. If she knows as many words per minute as she is years old I'll have no complaints, unless she gets faster than me... :).

Take care.

As of April 15, the Novice license was eliminated, so the jump to Tech +
is the entry point. A good place to practice the exam is

http://www.qrz.com

I am not sure if a current copy of the exam questions is in a new edition
of Now You're Talking, but you can check with your local book store /
Radio Shack, etc

try http://www.arrl.org for other items as well

have fun

1443. Apology to DX Group

DX friends, I just subscribed to the DX group so that I may post an apology to you. I don't ordinarily post to your group, however recently, Steve Adell/KF2TI has begun crossposting our "discussion" for reasons that I cannot fathom.
I have received a personal e-mail from a long time friend and DXer congratulating me on trashing your group. This was not my intention, and I apologize for Steve's actions which, to say the least, are bizarre and have caused intentional interference to your group. Hopefully Steve will stop the practice of sabbotaging your group as a means of "net combat," but I can offer no guarantees. Further crosspostings will be at Steve's hand, just as were the last group of SPAMs.
After this message is sent, I will unsubscribe from your group, and wish you the very best that the DX world has to offer - get 'em on the first call.

Very Respectfully,
Brian Burke/N0iMD

The local Radio Shack is clueless. I knew there were changes, but I did not know it included the removal of Novice. Oh well. Nonetheless I will learn the code, and take advantage of the easier upgraded licenses. I think the T+ gives me about all I really care to use anyway.

Source record: 20942

Searoy,

Now there is really only 3 classes. Tech, general and Extra. The code requirement
is only 5 WPM for all the code classes (General and Extra). Code is without question
an outdated requirement. Having said that many people really enjoy code. Using
the Koch method it is as easy to learn 13+ WPM as it is to learn 5 WPM.

Here is the web page the gives you details on learning via the Koch method:

http://www.ees.nmt.edu/sara/sara/finley.morse.html

Also MorseCat beta 1.1.2 is one of the best code training programs. It can
be shoe horned into teaching via the Koch method. ****WARNING*** Use only
the beta, because the release version will only do Farnsworth at 12 WPM.
This is really bad!

http://www.qsl.net/dk5ci/

In about a week or so I will be releasing a FREEWARE GPL testing program
which unlike any I have found will record and adapt to your week areas.
If you can make 60% or better with my program you will past the test.

Tech and General is cake, Extra will require a little work if you don't have
a background in electronics. It is kind of funny for the written test I spent
more time studying for Novice/Tech than I did for General and Extra combined.
Of course code was about double all of them combined. Wish I had know about
the Koch method when I was learning code.

You side tech plus was enough for you, this leads me to believe you don't understand
the bands. Tech plus will give you only phone/voice 200 Khz on the 10 Meter band.
10 meters 95% of the time is a daytime band only. This means if you work days
you will only have the daytime on weeks to do HF. With General it will give
you access to all of the bands. Extra will give a little more spectrum

on those
bands.

Good luck!

I was looking at these today. I agree. General, in the new format of things, is my new target. Extra does not appear to hold that great of advantages, but perhaps after I get more experience I will long for the extra few frequencies.

I have noticed that I learn code fairly well so far, but with the chart nearby as a cheat sheet. This way the few characters I have down pat go by easily, but those I am still working on I can glance up and catch. This is of course at a slow speed. I wouldn't expect to be able to do this at a respectable speed of code. As I learn the code I can ease up the speed. The ones I know pat could easily be sped up, but only at the expense of missing those I do not. Without any large investment of time over the past week I have down half a dozen or so characters:
C _ . _ . Q _ _ . _ E . T _ N _ . V . . . _ S . . . O _ _ _ 1 . _ _ _ _
2 . . _ _ _ 3 . . . _ _

The rest of the numbers should come easily enough, since I see the pattern. I've taken the practice exam for Tech 4 times and passed it 3, once with a 97%. The one time I failed I got a 68%. I haven't even finished reading the study book, but many of the basic electronics questions I've known for years. I do computers, and car audio, and have always been interested in electronics of all kinds. Only recently, within the past 6 months, have I ever really been exposed to HAM radio. Had it been introduced to me at any time in my past, especially at an elementary or middle school age, I would

have soaked it up.

I may go take the Tech test as soon as possible, since I know I can pass the test, and then concentrate soley on the code. After that I'll look at the General questions. I don't even have a radio to use, and my 66 VW keeps my money flowing steadily towards it (that's OK, cause I love it). It may be some time before I'm actually on the air. Who knows, by then I may be an Extra. My first transmission could be on 7.0 MHz!

Maybe I'm jumping the gun, but my vanity call sign I hope can be N2AVW. The database showed it blank.

Do you keep your original cal sign if you receive a vanity one, or do they reassign your original?

1464. WF5E QSL service

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-18 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <38fc77bf1vtanpl$mr2ice@news.uga.edu>
Source record: 20948

Has anybody used the WF5E QSL service? This is a very convenient service for outgoing QSLs that at 20 cents a card is also fairly inexpensive. However, for the cards I sent over a year ago, only about 30-50% got replies. WF5E claims 90% success rates. Anybody has any experience with his service? It seems that many DX stations would like that green stamp, and his green stamp for 20 QSLs may not be that attractive.

1467. Routine DX, or good conditions?

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-19 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <8djgdk$h9i$1@slb6.atl.mindspring.net>
Source record: 21001

As a newly minted /AE, have questions on band conditions. I made the
following contacts:

Puerto Rico 15m 6:30PM PDT
W0xxx 20m 8:46PM PDT
HA3xx Hunguary 20m 10:18PM PDT
KH6xx Hawaii 20m 6:18PM PDT
KL7xx Alaska 20m 8:38PM PDT

Yes, I know I should use GMT, but I have to get a 24Hr clock.

Rig is a Kenwood TS440S with attic dipole, mode SSB
Location is Silicon Valley California.

Are these avove contacts routine DX, or have conditions been unusually
good (or bad)?

Many years ago I was in the US Air Force and did a lot of communication via TTY. We used several "Q" & "Z" signals to shorten our broadcasts and speed things up. An example of what I'm talking about is:

ZUJ QRL QRX

meant:

Standby, I'm busy, I'll get back to you.

What I'm looking for is a list of these signals (if they even still exist). Does anyone know where I can find such a listing?

If so, please email me at KJones@sprintmail.com I'm not sure if I'll be able to check back here for answers.

Thanks VERY Much!!

Ken Jones

1470. Re: WF5E QSL service

Date: 2000-04-19 00:00:00 UTC
From: kh2d@my-deja.com
Message-ID: <38fd721d.64236032@news.guam.net>
Source record: 21004

Some QSL services don't send any green stamps. But if they sent one with 20 cards, then everybody you sent a card to gets a dime, so nobody got enuff to buy you a stamp.......

Picture this. We get an envelope to the Guam bureau, with 30 cards in it and one SASE. Now who's gonna drive around the island, get a card from 30 people, put them all in the same envelope and mail them back ? Nobody. I'm not sure they were from WF5E, but from one of the QSL services in the U.S.

Here's the hard, cold, nasty reality of the DXCC game. The cards are going to cost you more than the radio you used to make the contacts.

If you wanna play, you gotta pay. There isn't any 'easy' way to get QSL cards...... When you work somebody, ASK them how to QSL.

And then if you want a card, do it. Now. Not eleven years from now...

I've used WF5E for many years. Works pretty well. There are some
stations/mgrs that won't respond to WF5E-sent cards, and he can tell
you which ones.

Source record: 21008

There seems to be a lot of DX to DX only around 28.300 to 28.350MHz.
The old calling frequency was 28.600MHz, but when Novices were granted
access to 10 meters, most of the activity seem to hover around 28.450 to
28.500MHz. I believe 28.600MHz is still the calling frequency, but
adjust this to your license and how much activity is on at the time.

Also, their was a 10 meter AM calling frequency based on converted CB
units, but I don't remember what it is.

The FM simplex calling frequency is 29.600MHz.

Howdy Ken -- we also used them in the Navy - back in the 50's.
All about Q-Signals, QN Signals, Z-Signals, R-Codes, and S-Codes at URL:
http://www.ac6v.com/page5.html#QS

Note that for the Mega Q-Signal list == many are not used for Hams as they for Aviation, Marine and the like.

There is a list of Q-Signals currently used by Amateur Radio Operators. Should be used for CW - but we all seem to use them for voice as well. QRT, QRM, etc

For example I doubt if you would ever hear this on the Ham Bands - "QAU - I am about to jettison fuel" hi hi

=========
Congrads Robert on the new AE, very good, your just in time for good
propagation conditions in the 11 year solar cycle.

Your DX contacts are quite common, but a good start for the road to DXCC.

On the bands at the moment -- here are some very rare, rare and medium
rare (yuk yuk) DX Operations
70 Yemen -- extremly rare
4W6GH -- Possible New Country and rare
VP6BR - Pitcairn - medium rare
3B8 - Mauritius - medium rare
France, England, Germany -- common and well done

To determine how rare a country may be -- see the Most wanted DXCC Country
lists at URL:
http://www.ac6v.com/pagev.html#MW
But they are all "rare" if you haven't worked em before

Conditions have been down somewhat. Take a look at Paul Dorey's excellent
Propagation charts at URL:
http://idt.net/~wngk19/sf2.htm
Here you will see that around 3-20-2000 we had a very high solar flux
(around 230 or so) and cooperative A and K indexs. Wow the bands were HOT.

Today the SFI is 160 with an A of 5 and K of 2. Not much hapenning on 10M
yesterday where back in the last of March we were hearing Armenia here in

San Diego -- Ain't heard them for years on that band!

You absolutely need a UTC clock down to within a few seconds -- all DX logs are in this format. Try Radio Shack -- they have some nice 24 hour $20 ones that run off of the line frequency -- which is quite accurate in the states. Just check against WWV at 10 MHz periodically. Right after your DX contact - you can switch to 10 MHz and get the UTC time

In the mean time see URL:
http://www.time.gov/

You can convert your local time contacts to UTC from the info here.

Just an added note...most managers I know of treat WF5E's packets essentially equivalent to a direct mailing from a ham. Les makes sure the manager is covered for postage, so it's like dealing with a SASE, except you don't have to open a ton of envelopes. I frankly enjoy handling cards from Les....it's straight forward and easy.

SB QST @ ARL $ARLB022
ARLB022 FCC says Generals not allowed in Advanced subbands

ZCZC AG22
QST de W1AW
ARRL Bulletin 22 ARLB022
>From ARRL Headquarters
Newington CT April 19, 2000
To all radio amateurs

SB QST ARL ARLB022
ARLB022 FCC says Generals not allowed in Advanced subbands

The FCC says newly upgraded General class licensees may not operate in the current Advanced class subbands under the new amateur rules. Bill Cross, W3TN, of the FCC's Public Safety and Private Wireless Division notes that no privileges changed for any license class.

The Advanced class license continues to exist under restructuring, which became effective April 15, although the FCC no longer accepts applications for Novice or Advanced class licenses. Current Generals do not earn Advanced class privileges until they upgrade to Amateur Extra class, when they earn both Advanced and Extra privileges.

The FCC also says General class operators may hold only Group C (1x3) or Group D (2x3) call signs, as it was under the old rules. Generals remain ineligible to apply for or hold Group B (2x2) call signs.

Newly upgraded licensees were cautioned to check the revised Part 97 rules carefully to make sure they're not operating beyond their privileges. FCC Part 97 rules are available on the ARRL Web site at http://www.arrl.org/field/regulations/news/part97/.

The FCC today released the Errata to its December 30, 1999, Report and Order on restructuring. The Errata incorporate minor errors contained in the original R&O and already made in the version of the new rules that appeared in The Federal Register earlier this year.

You don't need a 24 HR clock to convert to UTC (aka GMT). For PDT
just add 7 hours (add 8 during Standard Time months), remembering to
roll over the date after UTC midnight. And of course no problem to
convert 12hr time to 24 hr time without use of a 24hr clock.

73 and good DX.

Don't do this! Tear up your cheat sheet! I firmly beleiver there
should be
no more code test, but if you have to learn code, learn it correctly.
You may
find you enjoy it. You should learn to copy code by SOUND BEFORE you
learn
what the dits and dahs are for the letters.

Use the Kock method. It will save you a lot of hair.

Good Luck!

Ken,
I think you'll find that ham radio (on the radio) is a whole lot
different than ham radio (on the modem). Form your views by
what you hear in the headset, not by what you read on the
CRT.....

Ken:

I've been a ham since the late 1950's. I'm an Amateur Extra. My code speed is well over 35, and I'm an avid CW contester. I really enjoy CW.

Please ignore the unkind comments exhibited by the few that disagree so violently with the new licensing requirements.

The license requirements have eased several times in the course of history. Many of those complaining now passed their CW code test by answering a multiple-choice examination after listening to a few minutes of a tape. It used to be require a sending and receiving test at an FCC office, and the tension level could be pretty fierce.

While a "knowledge of the morse code" is an international treaty requirement, and I'd hate to see the mode die off, it seems awfully archaic to require a proficiency examination in just one mode that most amateurs don't use very much. I had questions about RTTY, Slow Scan TV, and various exotic digital modes in my license examination. But I was only required to demonstrate proficiency in one of these modes as a condition of my license.

We need growth in the hobby, or it will die as the current generation ages. Our average age has been increasing year by year, and that's not healthy for the long-term survival of the hobby. We need activity to preserve the precious spectrum space that we've been allocated. And yes, with more buyers the equipment choices (and price levels for those choices) will be better for us all.

Welcome to HF! You can talk to the world, and it's still magic even in this time of the internet and cell phones. There are a lot of great people in this hobby. And, yes, there are some that are rude.

And I hope that you, like many others of us, will grow to enjoy CW. As a matter of choice.

Perhaps you have confused amateur radio with Freebanding. Although certain activities occur at specific locations, any legal frequency is a calling frequency if you want to call cq. 28.400 seems to be a common gathering point, so start there and work it up and down from that point.

==========
Hi Gary et al. Although your statement about " any legal frequency is a
calling frequency if you want to call cq." is true:
The ARRL and others do recommend certain frequencies as "calling
frequencies" for example 146.52 MHz as the "National 2M Calling Frequency"
see URL:
http://brad.tm/radio/band_plan/

Ten/Ten International, QRP Clubs, IOTA organizations and others have chosen
certain frequencies to serve as a "calling freq" for those interested in
those activities. If the "calling frequency" is in use, naturally one must
wait until it clears.

For a list of known calling frequencies see URL:
http://www.primechoice.com/w7pxl/freq.html

I can tell ya fellers ain't never had a real Kansas City Steak. Rare - heck they is still kickin.
Used to be a place in Pomoma, Ca called Orlandos as I recall. Man a rare steak there was rare cooked and rare because it was the best - west of KC.

Back to the orginal thread, my apologies to those referred to as common and well done, only meant to imply that these are heard on the HF bands very frequently (thank goodness). But failed to mention that the W, K, N, AC- AL's are not only common -- but over done I imagine.

All in good fun

Gary -- did you read the ARRL Considerate Operator's Frequency Guide at URL:

http://www.arrl.org/field/regulations/conop.html
it specificaly states that:
1.810 QRP CW calling frequency
3.710 QRP Novice/Technician CW calling frequency
3.560 QRP CW calling frequency
3.885 AM calling frequency
3.985 QRP SSB calling frequency
7.285 QRP SSB calling frequency
7.290 AM calling frequency
10.106 QRP CW calling frequency
14.285 QRP SSB calling frequency
14.286 AM calling frequency
==========
From the IOTA pages at URL:
http://www.dk0tui.de/ham/ham_iota.html
Calling Frequencies
CW:3530, 7030, 10115, 14040, 18098, 21040, 28040 khz
Fone: 3755, 7055, 14260, 18128, 21260, 24950, 28460, 28560 khz

=========
The PSK folks recommend 3580.15 PSK-31 (offset -115 for USB) as a calling
frequency as well as PSK frequencies on other bands
==========
The xtal controlled folks recommend 7.050 XTAL Controlled Rigs as a calling
frequency
==========
SSTV folks use 14.230 SSTV
==========
Ten/Ten folks call on 28.380 10/10 SSB Intl Calling Frequency

28.425 10/10 SSB Intl Calling Frequency
==========
All of these are commomly referred to as Calling frequencies, and as you pointed out no one owns them, so folks wait until they are clear and once a contact is made -- frequently move off to clear the channel.

But be assured there are calling frequencies commonly used by HFers

Great,

For the most part I have seen the same thing, but after one QSO to
VK land someone who didn't id jumped on and called me a "welfare extra".
I also was reading the mail during a QSO where they were bashing new
upgrades. The other 99% of hams has been very supportive and
congratulated
me. I am impressed!

Well, not that I approve of the lack of IDing but if you are an Extra and did not pass the 20 wpm exam you ARE a welfare extra, plain and simple.. An Extra ONLY because they lowered the standards down to your level, not because you excelled and raised yourself up to the previously high standards that existed before 4-15-00 (actually before the FraudFest that was the (as the FCC admitted MUCH ABUSED) Disability (NOT!) waivers.

Sorry... deaf and blind epileptic paraplegics could learn 20 wpm code... what the hell made you so damned 'special' or 'disabled' that you couldn't?

> I also was reading the mail during a QSO where they were bashing new

Yeah, I guess most either were not there when CB turned into a garbage heap useless wasteland or refuse to learn from history.

There has NEVER been a SINGLE time in the recorded history of man when there was overall benefit from a LOWERING OF STANDARDS.

Then he is an idiot, because unlike all the other General upgrade hams pre-4-15-00 (The Day They CBized Amateur Radio) you did not pass the 13 wpm exam.

Whether you consider such to be important or relevant or not, it is still a difference, and to a large number of folks a very significant one.

So claiming that 'there is no difference' between a fresh cooked hamburger at an old style burger joint and one of those flashfrozen White Castle frauds, well, I will leave it at that, ok?

Hello Ken,
As you can see by the replies in the newsgroup and your on-the-air experiences so far most Hams are welcoming you to the rest of the HF bands and have no axe to grind. I did my 20wpm but couldn't care less if you did 13 , 5 or none. It makes no difference to me because it is a non-issue. I have always felt the CW tests were silly and ridiculous and the for the most part the FCC agrees.

I have never sent one dit or dah and never intend to either. Call me a No-Code Extra

BTW welcome aboard. Catch me anytime in the upper half of 17M phone. See you there. Congrats on the /AG

Simple! Why should I or anyone else be required to learn code? Don't
waste
your time with illogical arguments like: it will turn it into CB bands,
etc.
It didn't happen with 2m or 440.

What is funny is when I got back into ham radio I believed it was
important
to keep the code testing requirements, but these NG pointed out the
flaws
in my thinking. Because I have a open mind (unlike many in the NG) I was
able to accept that the code requirements is completely outdated.

I guess not, but they must have been around when the no code tech was
granted
and 99.999% of the no code techs have been outstanding examples of how
to operate.
You are just a bitter old fart! Not sure why. I just know that bitter
old
farts like you will do more to hurt the hobby than any so called
lowering
of standards.

In reality the standards were not lowered just changed. True the minimum code speed has been lowered but new technology has been applied to the written exams. Many of you proud old time Extras who have devoted your years to CW and HF only couldn't pass the new Extra exam without first memorizing a the question pool. I challenge you all to take the new Technician, General and Extra elements and prove it to yourself. Why your at it why not prove you can still copy 5 wpm, too. I think some of you just want to keep everyone else out of your exclusive club. I don't see you commenting about the Hams in numerous countries that get awarded licenses because they are members of the royal family or government employees while hundreds of others are denied. Many of you probably proudly display some of their QSL cards in your shack.

Mark, K1MKF/AG

Way to go Neal! You have proudly displayed the true spirit of amateur radio. I can only hope that you continue in Ham radio so as best educate the thousands of us "welfare upgrades" how to best represent the spirit of amateur radio. Please, volunteer to elmer as many new Hams as possible. It is only with the guidance of an esteemed individual such as your self that we can guarantee the future of amatuer radio. I strive to be just like you. Anyone know where I can take a 20 wpm test and prove myself worthy?

Mark,

The last thing I wanted to do was rehash this (dead) issue. The 5wpms
are here, and this one is trying his best to make all the 20wpm
diehards realize that 'LOW CODE HAM" does *NOT* equal LID.

My real point to this was to thank what I percieve as the *majority*
of the on-the-air HAMS who have welcomed me and the others like me to
the exciting world on HF radio.

I am actually disturbed by this post because you essentially
dismiss a rule violation (failure to ID) and consider that to be less
important than the reduced CW requirement. I think you need to re-
evaluate priorities here.

Team of Jiangsu DX Club will bring Long Island of China onto the air on May 1 to May 5. Please look for us on SSB,CW,RTTY and SSTV from 160m to 6m. Now we are doing a survey among DXers to see which band and mode are needed mostly, so that we can pay special attention during the operation. Please check out BI4L's homepage: http://www.7388.org for further infomation.

>>Has anyone heard why the Yemen dxpedition is spending
>>so little time on SSB? Lee KA0FPJ

Before they started, they said they would emphasize CW for the first few days. Perhaps this is because the last major legal expedition there was ssb-only and they wanted to redress the balance. Or perhaps they like CW more - it happens...

They were on 17m SSB today for many hours, and they are there for another week. No excuse for not working this on any mode you want to!

I am in need of info on how to setup or program a 10 channel tait t496 uhf radio. I also have a t196 and was wondering if this was worth doing anything with.
There is a t500 on the work bench at the moment. It also seems to have been modified after production. I can't get the diode matrex to work at all. Got some other circuit board with a 40 pin chip in the cover.
All info on mods and programming for older tait gear is very much welcomed.
And what do i have to swap..........well lets see.........I run a rss depot site for many radio programs.........currently at 400megs ....lots of motorola.........lots of tait.......and lots of other stuff ....
Believe me, it would be of great interest to help me and get some real goodies in return.

Do not answer through news groups. Use my email address for contact......

cheers Mike vk4vzk

It is not crap, so to answer your question, your question is non sequitur, and your facts are uncoordinated.

> > that existed before 4-15-00 (actually before the FraudFest that was the (as
> > the FCC admitted MUCH ABUSED) Disability (NOT!) waivers.

>
> Simple! Why should I or anyone else be required to learn code?

Why should I or anyone else be required to learn how to build a transmitter or receiver? They are all store bought these days, no one NEEDS to build their own or fix their own. Why should I or anyone else be required to learn about RTTY, Packet, AMTOR, ATV, SSTV or any number of other modes which we may choose not to utilize? Hmmmm?

At least morse has a use. I HAVE had QSOs with foreign hams which I would NOT have been able to without that mode. They did not havr the high tech apparatus and they did not speak english well enough for voice.

But you did not answer my question, did you?

I answered yours... it is only fair and sporting that YOU answer MINE.

Or is it that you cannot without proving me right? Hmmmmm? Your lack of answer will be taken as an affirmative response here.

> Don't waste your time with illogical arguments like: it will turn it into CB
> bands,
> etc. It didn't happen with 2m or 440.

Those are far more limited in range and scope, as well as the fact that most communication on those goes through repeaters and anyone harassing the local repeater usually gets tracked down BUT QUICK by the repeater association.

HF is a different issue.

> What is funny is when I got back into ham radio I believed it was important
> to keep the code testing requirements, but these NG pointed out the
> flaws in my thinking.

Browbeat is more like it apparently.

> Because I have a open mind (unlike many in the NG) I was able to accept that the
> code requirements is completely outdated.

Ah, I see... the famous definition of 'openmindedness' IOW 'that which agrees with ME!'

ROTFLU!

> > > I also was reading the mail during a QSO where they were bashing new

>
> I guess not, but they must have been around when the no code tech was
> granted and 99.999% of the no code techs have been outstanding examples of how
> to operate.

Oh really? No code techs were able to legally operate voice in the HF bands prior to 4-15-00? (actually even now, since the Technician carries no HF voice privs, does it?) Since when?

> You are just a bitter old fart!

Not bitter, hardly 'old' (unless you consider 38 to be approaching venerability) and it is you who seem to be farting, not I. I merely hold to standards. You apparently feel differently.

> Not sure why. I just know that bitter old farts like you will do more to hurt
> the hobby than any so called lowering of standards.

Well, lessee... those LIKE ME who stand up for standards have been the mainstay of this hobby since its inception nearly 100 years ago... it has only been in the last 10-15 yrs that the whiners have begun to take over... first the no-code tech whiners... then came the debacle that was the 'much abused (as the FCC called it)' (non)DISABILITY waivers... and now this crap of 'restructuring' which translates to 'dumb down the standards to cater to both the whiners and the ricebox industry who just want to be able to sell more riceboxes'.

> > There has NEVER been a SINGLE time in the recorded history of man when >
> there was overall benefit from a LOWERING OF STANDARDS.
>
> First time for everything.

You will have the burden of proof, then.

But thanks for your indirect admission I was right, or you surely would have presented an example, right?

Your sarcasm is duly noted, however I have likely elmered, taught classes to, and been a VE for the legitimate upgrades of far more hams than most anyone in this ng has.

So you might take a bit more heed before shooting off your mouth, Mark... you will be less likely to shoot yourself in the foot.

However since this ludicrous 'restructuring' I will likely be sending my VE credentials back in... as I will not actively participate in or promote this farce. I will continue to teach hams, especially morse, and I will continue to elmer those who are not the whiners you epitomize.

> memorizing a the question pool.

Irrelevant since we are not required to do so. We passed our exams INCLUDING the 20 wpm. Clearly you will not be able to say the same.

And to use the whine of the anti-code whiners, why should anyone else have to learn anything about these other modes that THEY will never likely use? Hmmmm?

> I challenge you all to take the new Technician, General and Extra elements and
> prove it to yourself.

Why bother? I teach the courses, so I have no doubt I could pass the test.

Can you pass 20 wpm?

Didn't think so.

> Why your at it why not prove you can still copy 5 wpm, too.

I routinely have QSOs above 30 wpm. And you? Can you tell me what dididididah is without looking it up somewhere?

> I think some of you just want to keep everyone else out of your exclusive
> club.

No, just maintain standards.

I wonder how the Bar association would feel if anyone could practice law just by whining enough for it. What about the American Medical Assoc... and those who whine they want to be doctors because the pay is better than their job at McDonalds? Hmmmmm?

> I don't see you commenting about the Hams in numerous countries that get
> awarded licenses because they are members of the royal family or government

That is irrelevant since those are not the US and I have no say in the matter. Please do try and stick to the subject even when you are being trounced, ok?

> Many of you probably proudly display some of their QSL cards in your shack.

As a rare DX, why not?

Actually I do not dismiss it at all... there is simply nothing I can do in this ng about that incident. I DID mention that I do not approve of the lack of IDing.

Seems to me you are just desperately grasping at straws OM.

Walt,

Many times small companies like mine let the hams on the net know about upgrades via the newsgroups, and since many DXers use Logwindows, I felt it was an appropriate post in this newsgroups. Unlike a 'spammer', I pick and choose a newsgroup to inform, rather than massively post or email to thousands blindly.

Actually, Marv, that would apply to you, not me. You asked a question, I answered it, and apparently with laser accuracy, and you apparently lack the personal credibility to deal with that.

Oh well..

Not everyone is as immature as you.

And considering your support for (and likely advocacy of) the position of the whiners and the lowering of standards, well, all I can say is at least you are consistent.

Dick,

Very well said!!!! I do believe that by far most hams agree with you or
at least they understand that it is really very childish to blame the
new hams for the "lowering of standards".

I do plan to learn high speed code for the pure enjoyment of it. I
don't
know if it will be this year, next year or in 10 years.

Thanks for the words of reason and wisdom!

Yea right!!!! The no-code school has fairly good basics for their
claims.
The die hard coders are trying to use FUD (Fear,uncertainty and doubt).

> utilize? Hmmmm?

Not sure what you are getting at, but if it is trying connect learning
about
theory and learning code talking about non sequitur! Learning code
doesn't help
in anything except operatoring in CW. It doesn't improve anything. All
of the
other stuff help build your understanding. CW doesn't! Tell me just
one way
learning CW advances the hobby! It hurts the hobby because it turns off

very
bright people who otherwise would enjoy this hobby and help advance it.

That they did.

Were they concentrating on Europe or Asia for the first few days? Their signal strength seems to have improved here in the USA by some 20db over the weekend!

I had the chance to work the (in)famous VK0MM over the weekend too. For someone without extensive DXpedition experience he was doing a fantastic job - especially of forcing the pileup to follow his instructions. Not sure I understood the reason for the occasional changes in his transmit frequency though.

YK1AH has been hanging around on 20 CW too. Pretty weak, I figure he's QRP?

Hello Ignacy,

I use WF5E for cards that I don't need in a hurry. There are a few managers,
Mostly statesid,e that don't like bureau operations but WF5E returns those
with a note. I get a nice full couple of QSL envelopes every so often and the
cards with the WF5E stamp on the back are usually a little quicker that bureau
both ways.

EGO MANIA WAS RIGHT !!
Oh yes Standards alright... COME ON NEAL ADMIT WHEN YOU'RE WRONG

You seem to have Standards and Double Standards mixed up.
You say on your own web page..." The basic tenet of my faith is "An it harm none, do as thou wilt""
But you harm away by slamming an innocent fun loving newcomer who was here to say Thanks.

Can't you just be noble...and admit a fault at least to yourself... and be nice.
Everyone makes mistakes, just allow yourself that and go forward in good faith.

Don't be so proud of your own ability to memorize give away test's and a few little beep's
that you become mean-spirited to the well intentioned. It doesn't seem to fit the nice profile
of a father and gentleman that you seem to be from your home page.

Amateur Ticket's have always been easy for those that apply themselves.
Why make a big deal out of the fact that you can do CW? Many can... I love it
I know the new changes will help the amateur radio hobby grow. It is up to us to work together.

I choose to be anonymous to emphasize the REQUEST to end this dribble and get it off of
our newsgroups.

1584. QSL via Buro, Burro or Bureau ?

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-24 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <8e2bng$a8d$1@nnrp1.deja.com>
Source record: 20968
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

A paradigm that needs to be straightened out for the newly upgraded amateurs emerges with the usage of these terms.

Via Buro: Indicates the amateur you are talking with is lazy (like you were when you waited for the bar to be lowered) and does not want to spell out words in proper English, or anything approximating the CW operator's conventions of using consonant letters only to abbreviate.

Via Burro: Indicates the (usually, but not always, Russian) amateur you are talking to wants your card. However, bailouts from the IMF, monetary blackmail on threat of nuclear assault declared by a drunken Boris Yeltsin, and black market sale of caviar have done nothing to alleviate this operator's cheap streak.

Ergo, the ham you are conversing with expects you to shell out 5 bucks to send him a card "por Avion" to confirm Middle County, Middle America, but will return the favor by sending his on a pack mule, typically on the Moscow- Libya-North Korea-Siberia-Whittier-Vancouver-Chicago-Miami-Havana- Washington route.

Source record: 20970
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

So here we are again, reviewing yet another fine ARRL publication. This time, it's Low Band DXing by John Devoldere, ON4UN.

A more knowledgable operator there never was. This man has constructed a tome worthy of its fee. Unfortunately, poor Mr. Devoldere was tricked by a crafty ARRL staff into thinking the US amateur actually give's a rat's ass about how signals are propagated or how antennas might be made more efficient. His success may not be that great with this edition.

Six hundred some-odd pages of charts, graphs and how-to's (hell, I'm not too proud to say I learned much) make this volume the book K1 Zooming Moron's piece of shrinked wrapped cotton candy (geared to the average idiot found in US ham radio these days) should have been.

Like I said in the previous review, never buy a book ARRL has seen fit to shrink wrap. It's a bright neon sign that says "you'll need more books than this one buddy, it doesn't stand on its own merits". Take "Tune in the World" or "Now You're Blathering", for example.

Granted, ON4UN's tome lacks the stunning recordings of dead and now-disinterested "retired" amateurs that K1 Zootsuited Mope's booklet contained, and doesn't have the thrilling monotone narration of K1ZM (I wonder if he used his contest keyer to piece the words together ?), but one can overlook ON4UN's glaring omission for it's value as an operating manual.

Not for the faint of heart, GED holders (without electronics experience) or those who memorized the answers and distractors (I apologize for losing over half of the new upgrades with the use of the latter word), ON4UN puts K1ZM's booklet to shame.

If W1BB was a lover of boring repetitive chronology, then he is smiling on K1ZM (not). If he was a man of knowledge and action (as he was) then he has his own copy of Low Band DXing.

90% may be an optimistic average, but I can assure you that I have
received cards back using WF5E that I couldn't get with a direct card. I
depends upon the cards that you submit. If all you have are plan-Jane
regular stuff, he sends them on to their buro, but the tougher ones who
use a manager, who have put on dxpeditions, etc., stand much better odds
of being replied to.

There is a tremendous demand for 7O. If they limit the operation to cw, they have effectively eliminated at least half of the guys on hf who may have passed a test for cw but don't have a clue how to use it. For the DX, it is an easier audience to deal with, and they still get as many q's in the book, perhaps more. The XR0 group apparently didn't even have a microphone on their dxpedition. Might be a new reason to study the code!!

Source record: 20975

Start learning code with whole words consisting of easy letters only. I
am a Unix expert, so I wrote a short perl script to process the Unix
/usr/dict/words file and generate a randomly ordered list of words:

```
#!/usr/local/bin/perl
$infile="/usr/dict/words";
$outfile="randwords";
open(O,">$outfile");
srand ( time() ^ ($$ + ($$ << 15)));
open(F,"<$infile");
while (<F>) {
print O rand," ",$_;
}
close F;
close O;
system("sort -n <randwords |
awk '{print \$2}' >randwordss; mv randwordss randwords");
```

then used an expression like

"egrep -vi 'f|c|l|q|y|u|v|g|z|k|r|p|x|a|w|j|n|d|b' (prints only
words with EISHTM and O).

to select words with the easiest letters first. Take out letters from
the grep expression, and they will be included in the list. The general
order of letters from easier to harder is:

EISHTMO WANRDUK FCLQYVGZPXJB (numbers) (punctuation)

I feed these lists of words as input to any of the common computer morse
programs. I get lists like:

(easy)

EST miss tit mimesis host shoot ii m shoe Io testes moot them toot
these i met some hot 7th home sis Isis Thetis ho shoo mess m's Hess

SO6DS makes more sense. Calls with more than three letters in the
suffix are VERY rare.
(but not unheardof. I have a HB9AMAD in my QSL collection and there
have been others.)

The 1AA-1ZZ block is not assigned by the ITU. Any callsign like that is
unofficially unassigned.

1.. calls usually show up in "countries" that aren't diplomatically
recognized by anybody. Places like Northern Cyprus and Chechnya. They
probably don't count for DXCC either, though as Peter said some have in
the past & you never know what might happen in the future!

Hi pete,
In the rsgb prefix guide 1B1 is TURKISH AREA OF NORTH CYPRUS.
It also has notes attached to it,this reads as follows.

This is an un-official prefix that is not in accordance with an authorised
ITU allocation.Use mght be illegal but details are included for purposes of
indentification.
Some un-official prefixes are recognised for DXCC credit e.g. 1A0 and 1S.
In some cases un-official prefixes are adopted for political purposes e.g.1B
and 1Z.

Hope this is of help

Best 73

1598. ARRL Website down

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-25 00:00:00 UTC
From: N1XTV <thousandislands@mediaone.net>
Message-ID: <dDnN4.21765$T04.208364@typhoon.ne.mediaone.net>
Source record: 20800

The ARRL site at www.arrl.org has been down since last night. This morning, it was (painfully) obvious that someone had hacked into it, replacing the main page with "this site is F***ed" and mentioning airwave pirates. No word on how long it will be down.

1599. Re: WF5E QSL service

Newsgroup: rec.radio.amateur.dx

I have also had success with WF5E. Sometimes it takes more than a year, but
I have done a lot better with him than with the buro. For soemthing I really
need, I still send direct.

Info from an ARRL Bulletin said it wasn't the ARRL site that was
hacked into, but the DNS servers that translate www.arrl.org into its
numerical address. It's fixed now.

Not yet, perhaps later tonight after the root name servers
get updated. It appears the 'hackers' updated the InterNIC
record for ARRL.ORG on April 22.

Domain Name: ARRL.ORG

Administrative Contact:
Summer, David (DSQ363) pwsmaster@HOTMAIL.COM
ARRL
323 asdga
asdg , CT 23622
232-566-8665

...

Domain servers in listed order:

NS1.NETFIRMS.COM 216.32.198.6
NS2.NETFIRMS.COM 216.32.198.7

One would think that Netfirms would have restored the proper
DNS information (address for www.arrl.org and mail exchanger,
at least) immediately, upon notice of the fraudulent InterNIC
update. That hasn't happened yet.

**********PROYECTO CD-Rom RadioSoft/2000** 2�
EDICI�N**********
**********LA MEJOR SELECCI�N DE SOFTWARE DE RADIO
AFICIONADO**********

Que es el Proyecto CD-Rom RadioSoft/2000 ??

Selecci�n de los mejores programas de Radio Aficionado para todas las
modalidades de Radio
Se trata de la edici�n anual de un CD-Rom donde esten representados
todos los programas
de Radio desarrollados por Radioaficionados Espa�oles,adem�s el CD-Rom
RadioSoft/99
Pretente ser un escaparate donde todo Radioaficionado que realice
proyectos pueda
darlo a conocer de forma gratuita como por ejemplo,software de
radio,kits de radio
circuitos,modems,antenas,receptores de sat�lite etc..
Otra idea para este CD-Rom RadioSoft/2000 es que todos los
radiaficionados puedan
Exponer sus trabajos como si de una Exposici�n se tratase pueden
incluir en este CD-Rom
RadioSoft/2000 como por ejemplo exponer imagenes recibidas a trav�s de
sat�lites meteorol�gicos
listados de frecuencias utilitarias,im�genes de sstv,wefax etc...

Que contiene el CD-Rom RadioSoft/2000 ??

Programas para recibir Mapas Wefax i Satelites Polares
Nooa,Meteosat,Okean etc.. recibelos
en tu ordenador con tu tarjeta de sonido,disfruta de la meteorologia en
tu pc.
Programas de seguimiento de Sat�lites los mejores para Windows95/98 o
MS-Dos
Programas de Log para que lleves al dia tus contactos DX o captaciones.
Pogramas para ver las �ltimas estaciones DX conectadas en tiempo Real a
trav�s de Internet
Controla tus equipos de radio y receptores por odenador con los mejores
progamas de CAT.
Se trata de un CD-Rom con programas muy seleccionados y con las �ltimas
versiones Cientos
de programas de Radio ordenados por
categorias,PACKET,SATELITES,LOG,SSTV,CAT etc...
El CD-Rom RadioSoft/2000 dispone adem�s de mucha informaci�n

complementaria como
Frecuencias,Balizas Direcciones de Internet por materias inprescincible
para escuchas y DXistas.
Dispone de una carpeta denominda Soft EA con Programas de Radio
desarrollados por Radioaficionados
Espa�oles en idioma castellano,en esta 2� edici�n del CD-Rom han
colaborado muchos colegas EA

Como Puedo Adquirir el CD-Rom RadioSoft/2000 ??

Si estais interesados en recibir el CD-Rom RadioSoft/2000 podeis llamar
al Tfno: (93)6685309
Movil:(649)302362 tambien por via E-mail a tarentola@yahoo.com
indicando vuestra direcci�n
El precio por de cada CD-Rom es de 3.500 + gastos de envio
Contrareembolso

Como Puedo Colaborar en el Proyecto CD-Rom RadioSoft/2000 ??

Muy simple,puedes enviar cualquier informaci�n sobre
software,fotografias de Wefax,Sstv
Proyectos,Kits de Radio o cualquier otro proyecto que quieras dar a
conocer.
La inclusi�n de cualquier informaci�n es TOTALMENTE GRATUITA !!
Puedes enviar la informaci�n a la siguiente direcci�n:

Proyecto CD-Rom RadioSoft/2000
Apartado de Correos 31
CP-08758 Cervello
Barcelona

NOTA:
ESTE CD-ROM NO CONTIENE PROGRAMAS PIRATA,EN TODOS LOS CASOS SE INDICA
SU SITUACION
LEGAL,INDICANDO SI SON SHARESWARE,FREEWARE O DEMO,ADEMAS EN EL APARTADO
DE
SOFTWARE EA,SE DISPONE DE PERMISO DEL AUTOR PARA INCLUIRLO EN EL CD-ROM
RADIOSOFT/99

Saludos

Ram�n EA3CFC y Antonio EA3AHW (Coordinadores del Proyecto CD-Rom
RadioSoft/99)

I'll take a wild guess: if you worked him on CW, and he was
calling CQ, he may have ended the CQ with "... SO6DS PSE K",
and the P came out sounding like an F, not unlikely if he
used a straight key.

In the beginning they were only operating with verticals, but now they
have erected Log-Periodics, which acount for improved signal strength.

They do a great job at working propagation paths and giving every region a
good chance. Heard them say "Europe QRX" and listen to East Coast, Asia
and West Coast specifically. They are Europeans, but they want to give
every region a good chance.

Wish FO0AAA had OPs like that.

Greetings all,

20 meters has been very interesting lately

I worked a guy in Poland last night and I'm a little confused about the call sign. Any help would be appreciated. I can't find either on the callsign servers.

SO6DS or SO6DSFSE

Which makes more sense?

If you can recommend a good int'l callsign server I'll do the work myself.

Thanks, Don, KB3DMA

> > utilize? Hmmmm?
> >
> Not sure what you are getting at, but if it is trying connect learning
> about theory and learning code talking about non sequitur!

It perfectly follows, so you clearly do not know the meaning of non sequitur.

It is a matter of your whining that you should not be required to learn a mode YOU do not see yourself using, so I merely extended that to ALL the modes and aspects... including if someone does not intend on ever building a radio why should they need to know the theory. 99% of hams today (especially thanks to the No Code Tech license) are appliance operators only.

> Learning code doesn't help in anything except operatoring in CW.

Learning how to build a linear doesn't help someone operate their rice box... learning about Pactor does not help anyone at all if they will not be using that mode.

Your point was, again? Hmmmm?

> It doesn't improve anything. All of the other stuff help build your understanding.
> CW doesn't!

It does at least as much as any of the rest.

I have no intention of ever using Pactor... as such it does not help build my understanding of anything I deem relevant. So it is the same thing.

The least you could do is be CONSISTENT in your whining, you know?

> Tell me just one way learning CW advances the hobby!

Already did so. I have had QSOs with hams in other lands which I would not have were it not for CW.

Also there are the cases which have been mentioned throughout the history of ham radio of morse saving lives... when someone whose HT will not transmit voice was used to send CW and bring help.

If hams were not fluent in that mode, that help would likely never have arrived in time.

> It hurts the hobby because it turns off very
> bright people who otherwise would enjoy this hobby and help advance it.

It only turns off selfcentered lazy whiners. I see nothing in such cretins which constitutes a loss to the hobby by their noninvolvement. If they are too lazy to earn what they want they will clearly not bother, for the most part, in helping out when needed. Hey... why should they? They have far better things to do, in their selfserving opinions.

The question follows perfectly, you are being dishonest, evasive and obfuscatory.

Thank you for admitting you will not answer the question, because it is clear that NOTHING makes you so special.

> > Those are far more limited in range and scope, as well as the fact that most

I am set in my ways when there has been nothing to show me why I should change them. And you have not. Show me where in the history of man things were IMPROVED by a LOWERING of standards, will you? Please?

I do not harm him by speaking the truth, and if he is harmed by my speaking the truth that is his problem, not mine.

> Can't you just be noble...and admit a fault at least to yourself... and be
> nice.

I am perfectly nice to those deserving of it. I admit fault in myself when such fault is clearly shown. You have yet to do so. No one has yet to show where my position in this is wrong, and IN FACT my abilities to predict what will occur has been shown to be UNERRING in this context. I knew the anti-coders would not stop at the no-code tech... I knew the 'disability waiver' (Bush's catering to lazy whiners) would be a source of massive abuse. I said so immediately at the time, and have been proven 100% correct and accurate to date in this.

And way back in the 70's I saw the writing on the wall regarding CB and was again proven 100% correct and accurate.

So, please explain to me why I would or should find error in me, when history shows that in this context, none exists?

> Don't be so proud of your own ability to memorize give away test's and a few
> little beep's that you become mean-spirited to the well intentioned.

If they are so 'well intentioned' they can EARN their additional privs just as I and millions of others have.

I see no virtue in the lowering of standards, especially when done just to cater to selfserving and lazy whiners.

> It doesn't seem to fit the nice profile
> of a father and gentleman that you seem to be from your home page.

Sorry you feel that way. But I also raise my family to believe in high standards and to work for such. I do not tolerate slackers, whiners and those who play The Blame Game (tm) to desperately try and excuse their own personal failures. There is no dishonor in failure if you give your best. There is dishonor in whining about it and expecting a handout.

> Amateur Ticket's have always been easy for those that apply themselves.
> Why make a big deal out of the fact that you can do CW?

Because that is the standard, whether officially ignored for political expediency or to pay back political favors or not.

> Many can... I love it
> I know the new changes will help the amateur radio hobby grow. It is up to
> us to work together.

I will not work towards what I see as the degradation of the hobby. Sorry.

On the island of Cyprus -- there is a "Turkish Cypriot Administrated Area in
the North part of Cyprus.
See URL:
http://www.odci.gov/cia/publications/factbook/cy.html
There they had a note as follows:
Note: the Turkish Cypriot area refers to itself as the "Turkish Republic of
Northern Cyprus" (TRNC)

At one time some Hams operating from Northern Cyprus used an unofficial
prefix 1B
The 1 block (i.e., 1AAA through 1ZZZ) has not been allocated by the ITU.

From the AC6V Mega Prefix page at URL:
http://www.ac6v.com/pageab.html
The 1AA-1ZZ Callsign Block has not allocated by the ITU. Some unofficial
uses have been or are:
1A Sovereign Military Order of Malta (ITU Zone 28 CQ Zone 15)
1B Northern Cyprus (ITU Zone 39 CQ Zone 20)
1S Spratly Is (ITU Zone 39 CQ Zone 20)

From the deleted country list (ARRL):
1M Minerva Reef OC 62 32

> ain't gotta clue.
Prefixes beginning with "1" are not official, as the ITU has not
assigned them to any country. A few ersatz "1" prefixes have been used
for some places beyond the control of any government, like the Spratly
Islands (1S by tradition). I think 1B has been used recently by
stations in Chechnya. Chechnya is still legally a part of Russia, and
QSOs with that place should count as European Russia. As 1B calls are
not officially issued and emanate from a territory that is recognised as
under Russian sovereignty, those 1B QSOs are probably not valid for
DXCC, but the QSLs are interesting keepsakes.

What I read was that Network Solutions indicated it could take up to 48
hours for the corrected entry to propagate to all nameservers. I know
the one we use at work was still messed up at 7:00 tonight, and the one
at Bellsouth.net is still screwed up right now.

(frustrating, as the other engineer on my shift came in to work &
promptly announced that his son had talked him into getting his ham
license back - and there was no way to open the ARRL website! Luckily
the FCC's site has some pretty comprehensive information...)

Larry W4CSC wrote:
>
> Not working at 2200 EDT. Got a site down message from the server.

I think the chances of the site working are going to depend on your ISP.

When you type "www.arrl.org" into your web browser, that request goes to a computer at your ISP called a "DNS server". This computer converts "www.arrl.org" into a set of numbers, say 192.168.1.1. Your web browser then directs your requests to the computer whose number is 192.168.1.1.

When a new website is created, or an existing one is moved to a different computer, that information is reported to a "domain name registrar". That organization then reports the name and the associated number to the world's DNS servers. This process can take awhile...

What seems to have happened in this case is that someone managed to convince a domain name registrar to change www.arrl.org's link from 192.168.1.1 to, say, 255.15.30.2. That caused those addressing www.arrl.org to end up on the wrong site.

If you happened to know the right number for www.arrl.org, you could access the site by number even if your ISP's DNS server had the wrong entry.

The root servers themselves have been corrected. The NSI whois
database, as usual, appears to be lagging the root server update by a
day or two.

<snip>
>One would think that Netfirms would have restored the proper

At this point, I'm not sure how much of a clue supply Netfirms has,
given how crackable their systems were. They appear to have taken down
the faux arrl.org web site, but they haven't yet cleaned up their DNS
servers.

One would hope that Networks Solutions, which are not a new
player but have been doing DNS registry for years and years,
should know how to secure their servers.

Not too many folks begin their homebrewing "career" by constructing
phone or digital rigs, but the number of hams who began by building
CW equipment is legion. After building comes trouble-shooting,
modifying, taking on more complex projects, and finally attempting
one's hand at designing. Think of CW as providing the bottom rung
of the homebuilding ladder.

> It hurts the hobby because it turns off very
>bright people who otherwise would enjoy this hobby and help advance it.

They could get a Tech license and explore the upper spectrum. Lots of
R&D work is possible up there. If they wish to conduct R&D on HF, they
could always apply for an FCC experimental class license.

Is it R&D work or just plain rag-chewing that they're interested in?

According to the International Call sign allocations(see, e.g.,
http://www.arrl.org/awards/dxcc/itucalls.html), that should be Brazil.

Hi Jim -- ZY is allotted to Brazil
ZY Brazil (ITU Zone CQ Zone 11)
ZY0F Fer De Noronha (ITU Zone 13 CQ Zone 11)
ZY0S Peter Paul Rocks (ITU Zone 13 CQ Zone 11)
ZY0T Trindade (ITU Zone 15 CQ Zone 11)

So my guess is it is a special event station

In your dreams, Walt. During the last CQWW most of violators, if not all,
were US-stations. Some of them even members of the contest committee,
"listening 7.005".

A complaint to CQ hasn't even been answered. What do you expect?

Hello,

I heard some talks abt the new numeric mode called "PSK31" & I'd like to get more informations about it to use it with a sound card (as a DSP). What's more precisely the big difference with RTTY (signal) ?
Thanks for every text or good website adress.

I see some very good advice. Tear up the cheat sheet - although at 5 WPM it will not hurt you; however, if you ever want to actually enjoy cw you'll have to get up to at least 15. I know, I had a heck of a time getting past 10 - I had learned the dots and dashes - failed my general twice in 1963. A friend of mine really came down on me stating that if I could learn grade 2 braille in 2 weeks, I could get the general (he is blind). He promised me if I would buy a code record (yeah, they were vinyl back then!) and faithfully copy 15 minutes per night I would pass in 1 week. I got used to the sounds. I was up to 18 wpm in 1 week and passed the general. I actually came to enjoy cw and got up to about 20 wpm in a few months. Then, almost overnight (less than 1 week), for whatever reason, I found I could copy cw. FAST. In 1966 I got my extra and went into the Navy in 1967. I tested perfect copy at 40 wpm in the Navy, the fastest tape they had. I now find that some ads in ham magazines have dots and dashes in their ads. I can NOT read them. I have to say the sounds of them and then can copy them. Really. The sound is the secret - you can't memorize the dots and dashes and expect to get past 10 or 12.

If you only want the ticket, go ahead with the dots and dashes - it will work for 5 wpm without problems. Again, if you ever think you'll use CW (other than with a computer program - which will have problems with any qrm) - then go with sounds only.

Best of luck to you - maybe we'll yak on the air someday!

Good words, Mark. I dropped all my licenses in 1980 or 1981 (my old memory banks aren't all that good) which were extra (N2JH), 1st phone (P1-20-8429 - I think), and 2nd telegraph (T2-20-594 - I think). I was too young at the time when I obtained the licenses to get the 1st class telegraph (oh, I had the radar endorsement too). At any rate, I decided to get my tickets back in 1993. I had not been on the air since 1969. Good grief. I'm too old to have to try and read what with my bifocals and all. Plus, I didn't even have a receiver to practice code on (although after TRYING the tests, I did write a computer program to send and receive morse code). So I went down and tested. Once. Only once. You know, I didn't even want to have to extract square roots by hand (although I can) - plus my poor old eyeballs and fat fingers just weren't up to using that zillion key calculator one nice gentleman offered to loan me for resonant frequency calculations. Good golly, I even guessed 40 meters went from 7.0 to 7.35 MHz! However, I was fortunate in that there were a lot of questions. Hey, I only missed 5 questions on the advanced.

Maybe we can meet on the air for a nice CW chat. Of course, you may use a computer if you wish. Just be aware I might still be able to copy CW faster than you can type. Oh yes, I think we ALL should retest every 5 years or so. I doubt I'll waste my time reading Q&A books though. Not necessary.

ps - never cared for qsl cards. Remind me too much of the DX chasers, one of whom (from Hawaii) tried to chase me off 20 meters whilst I was trying to run phone patches for guys in the US Naval Hospital on Guam (KG6NAC) during

the Vietnam war. I never quite got over that.

73s,

Jim, AA2QA - PG-GB-05180

pps - if you memorize a question pool, you'll be in trouble in a decade or two.

I think that horse is dead, boss. There is nothing in the U.S. rules
regarding where stations licensed by the FCC are allowed to LISTEN.

What you are saying is that I left my money laying on the table, and
you took it, so I'm a criminal. Twisted logic, at best.....

1647. DXCC Country List (04/00)

Newsgroup: rec.radio.amateur.dx
Date: 2000-04-27 00:00:00 UTC
From: k2di@bigfoot.com
Message-ID: <ffZN4.36154$fV.2211452@bgtnsc05-news.ops.worldnet.att.net>
Source record: 20831

The current ARRL DXCC country list (04/00 version) follows.
Changes include new entities Palestine (E4), East Timor (4W) and
Chesterfield Islands (FK). Also note my new email address (below).

This list is available via
- occasional Usenet posting to rec.radio.info and
rec.radio.amateur.dx.
- ftp://ftp.cs.buffalo.edu/pub/ham-radio/dxcc-k2di and
other Amateur Radio archive sites.
- email from the ARRL Information Service -- send a message
containing the line "send dxcck2di.txt" to info@arrl.org.

Much of the information was provided by Ron McConnell, W2IOL.
His detailed geographical listing is also available via ftp from
ftp.cs.buffalo.edu, and from info@arrl.org.

The colon-separated fields are:
1. primary amateur prefix
- "*" suffix for deleted countries
- "@" suffix for likely new countries
2. country name
3. continent(s)
4. ITU zone(s)
5. CQ zone(s)
6. time zone (hours from UTC)
7. latitude
8. longitude
9. ITU prefix allocation(s) ("~" suffix for unofficial)
10. other amateur prefixes

Please mail corrections and suggestions to me.

Bill Brelsford, K2DI
k2di@bigfoot.com

Ok, tell me two. ;-) My fault I misstated the question/request. You
are correct that for the few that still wishes to build their own rigs.
The question I should have ask was how does CW testing requirement
advance
the hobby. The person that builds a CW rig is going to learn it because
he wants to use his rig.

Both! It is important that it is both. Most people are attracted to
this hobby because of DXing. Advancement of the state of art is a side
effect.

I heard rumours the Yemeni-German-Friendship may have been strained ?
One report says they are QRT with equipment AND logs confiscated.
Anyone got any info ?

This wasn't just a "DX-pedition group", they were part of a whole German bunch going to San'a for "German/Yemeni Friendship". If it's broken down to the point that they're confiscating property, I'm not seeing any reports on either www.yementimes.com or www.dw.org

The FCC apparently misunderstood the request and thought some rule-
changing proposal was being requested... We're DIW in regards to
this event.

Press Release to the DX-Community

Activity
7O1YGF
Sana'a Apr. 26, 00

Dear fellow Dxers,

After 10 days of activity we have been kindly asked by the authorities to terminate our radio transmission. The reason for that is, that until now no agreement on the final status of this unique special activity could be reached. In this sense our earlier press statement, that the licence will be granted immediately after arrival on April 17 has to be corrected. For this statement given, based on misunderstandings, we ask the DX-Community to accept our apology. Nevertheless, the activity 7O1YGF is for the time being still in the process of approval We expect a written confirmation therefore in due time.

During this activity we were able to make about 35000 QSOs from 6 to 40 m using CW, SSB ant RTTY. We are happy that we were able to give the DX-Community the opportunity to work 7O, we thank the Dxers for calling us and we apologize to those who could not make it this time.

Last but not least our very special thanks goes to the people of the Republic of Yemen who hosted us and to the kind authorities for their constructive cooperation and support to finalize the issue and approve the establishment of amateur radio in Yemen.

We congratulate the people and the president of Yemen on the 10. Anniversary of reunification which falls on the 22nd of May, 2000.��.

The team of 7O1YGF: DJ7MG, DK1II, DK3KX, DL5EBE

Maybe we should initiate a new kind of dxcc award: WAP, worked all pirates. It could actually be very interesting. Just drop the requirement that the operation be officially licensed. Keep the requirement that there must be proof that the operation took place in the country claimed. This way, we add a sense of real drama to the dxcc...life or death. Hams would be sneaking into North Korea, Yemen, the Andamans, or Desecheo, setting up the way James Bond or the Navy Seals do. I can see it now, frogmen, qrp, thin wire antennas, cyanide pills in case they got caught, etc. etc. This could really get interesting..... 73 de John, K7JY. (326 DXCC countries confirmed).

Don't worry, because that's what's going to happen.

The reason for the delay in issuing the license is the fact that a few overly eager people thought that 7O would have to be activated by them and no one else. These people called the ministery of telecommunications and complained bitterly about them Krauts who got the permission first.

The operation was 100% legal and the license will be sent to Germany next week and it will be dated properly.

Why else would the ministery allow them into the country with 190 kg of radio equipment and issue a specific callsign?

I'd say there's probably something VERY wrong with your ISP's
nameservice.

First, I would try this:
Reload the ("site unavailable") page.
Hold the shift key and click the "Reload" icon on the top of your
screen.

If that doesn't work, you need to tell your ISP to fix their DNS
servers!

@Home's DNS server isn't translating it right, either. I suspect our culprit is still out there propagating the wrong IP on this address....somewhere.

Hello!!
I have a web page dedicated to the radio hobby here in Tampa Bay Florida. I am in the process of launching a new audio chat network on a channel for amateur radio enthusiasts. The idea is for webmasters to put the small html code somwhere on their amateur radio web page which would be linked all together worldwide. The system utilizes the new HearMe plugin which is a small 80k or so program new visitors of the amateur radio audio chat would download upon landing on the page which has the html code for the plugin. Please let me know if you decide to use the system so I can add your site to my links page to let others know your site is connected to the network. For a demonstration of the system you may email me for a time and date so you can see it in action. To get the html code please visit my web site below. To get further info on the HearMe requirments to have it work click on the help are for Hear Me on my web site. I am in no way affiliated with HearMe and my web site is a noncomercial page.You may also visit my radio page at the url below from 7pm to 8pm eastern time every day I try to be in my scanner audio chat at that time. I look forward to hearing from.
Thankyou
Best Regards
Tim Breckon--

: 73

What I've perceived so far is that the logs, at least, were not confiscated. They say they WILL send QSL cards. The press release they issued stated there were problems with the license, so they were "kindly asked to leave". Both ops are safe and back in Germany. I'm sure we will be hearing more soon.

This is a good sign, really; it's reminiscent of the Ukrainian 5A1A operation which eventually won accreditation for DXCC.

Hopefully, this is the beginning, not the end, of "Yemen-German Friendship".

Hi Larry,

I'm also an @Home user and it still isn't working here. I've been in touch with their pathetic customer service and they have given me all sorts of excuses why it isn't working. They claim it is working for them. They are trying to tell me something is wrong with the settings on my computer. Of course they conveniently ignore the fact that I'm not having this problem with any other website!

When I run a traceroute to www.arrl.org, I get a totally different result compared to when I traceroute to the IP address.

There are two ways to fix this temporarily:

1. Edit your bookmark so it points to 209.140.206.201 instead of www.arrl.org

2. Edit the Windows\host file by adding this line: 209.140.206.201 www.arrl.org

The problem with these is that if the IP number for the page ever changes it won't work anymore.

Hi,

People should never see movies that they are expert in. After
all it was just a movie. Sure the tech is flawed, all sci-fi
are (this one a little more than most others I have to admin).
Time plots are really flawed because things have to happen
they way they did. Otherwise there would be no reason to go back
and change them. The classic paradox.

I thought this was a fun movies as long as you keep your eyes
off the man behind the curtain. If you don't you find flaws
all over the place.

Not a great movie, but not a bad one either.

A52JS is legit. It is Jim Smith VK9NS who has started operating from Bhutan a few days ahead of the formal expedition. According to the Daily DX the callsign for the expedition which should be on the air in a matter of hours now is A52A. I have a link to the Daily DX on my website.

Didn't that actually become KH1? I think it's the VR1 stations that
became T31s.

Yeah, Its a typical mainstream movie.....THATS WHY IS WAS #3 IN THE BOX OFFICE THIS WEEKEND!!!

The "average" American is not going to notice the "flaws" that the "experts" see.

Movies are forms of entertainment, if I want reality or a history lesson, I will open a book.

It certainly looks that way.

On the other hand, from http://www.doi.gov/nrls/facts.htm at the U.S. Government Department of the Interior:

"FORMERLY DISPUTED ISLANDS

In the twentieth century the United States has disputed with other nations the status of certain islands or atolls. Five (5) were in the Caribbean; twenty-five (25), in the Pacific. For purposes of discussion, one may divide these thirty (30) islands or atolls into seven groups.

(1) The status of the islands of Canton (Kanton), Enderbury, Hull (Orona), Birnie, Gardner (Nikumaroro), Phoenix (Rawaki), Sydney (Manra), McKean, Christmas (Kiritimati), Caroline, Starbuck, Malden, Flint and Vostok:
On September 20, 1979, representatives of the United States and Kiribati met in Tarawa Atoll in the northern district of the Gilbert Islands. There they signed a treaty of friendship on behalf of their two nations, an agreement which many refer to as the Treaty of Tarawa of 1979. Under that treaty the United States recognized Kiribati's sovereignty over these fourteen islands. This treaty entered into force on September 23, 1983."

This would indicate that the U.S. believed it held at least partial sovreignty over Canton Island (and other parts of Kiribati) until 1983.

In the ARRL DXCC Countries List on http://www.arrl.org/awards/dxcc/prefix_refs.html , it says "KB6 (before 1979) = KH1".

(that U.S. goverment list has some other surprises - I had no idea the U.S. once claimed Tokelaus and the Northern Cook Islands..)

You could check realtime propagation on the bands you are using actually at **your** site, antenna and rig by using BeaconSee:

http://sapp.telepac.pt/coaa/beaconsee.htm

but beware, it is addictive!

Yes, it does have a future, because it doesn't rely on a commercial
telecomms network.

Well said...James, OB ! I think this "new" "heavily techical" stuff is a bunch of clap-trap. Sure, enough, there are new things....but, if you have a grounding in the OLD stuff...it is justa little "tweaking" in the brain. The Usual Basics don't seem to change...I say SEEM to fend off any LIDs that would properly advise me of the electronic THEORY that good old Ohm, Thevinin, etc are all based upon.

Yessss....I too have reached that stage where it is so much more easily copied than sent ! VY 73 "DM" N 7 D M

Yeah and "The English Patient" won the Oscar for Best Picture and it was horrible. So much for reviews and box office. "Frequency" will be on video really soon because it'll drop from #3 to 103 in a week.

Before the A52 operation opened up, I worked A51JS with a nice signal on
15m a bit after midnight UTC. That time/frequency should be even better
from W7.

(speaking of A51JS, am I safe to assume QSL via VK9NS?)

I agree Steve. This is really just an entertaining "popcorn" movie with
ham radio as a plot device rather than a central element. The plot
would have worked just as well with a crystal ball and a lightning storm
as with an ancient Heathkit and the aurora. I watched the credits to
the bitter end: there was no acknowledgment of any technical advice on
amateur radio matters.

Not really relevant, but I worked A52JS last evening at about 0038 on 20 CW. Weaker than weak in WNY with nobody calling him. Didn't even fire up the amp for him. After spotting him, some activity increased, but there was someone sending PIRATE over and over. How can you really tell? WFWL. Shortly after, worked A52A on 20 SSB with a better signal. Checked the online log today and I'm in, so whether the contact with Jim was real or not doesn't matter at this point.

425DXNews says QSL to VK9NS for A52JS.

Serial numbers for the N2DAN Mercury's mean little. Steve left some gaps in the serial numbering and went back and filled them back in the early 80's. I don't know how many were given "older" s/n's back then but I know mine was one of them.

Basically there are 2 different Mercury vintages. Those made by Steve from scratch at his own shop in NY, the 75 or so "spares" kits made in FL and the ones that were sub contracted out when Steve's own machining ran out.

All of the laquered brass models are Steve's own personal handiwork from scratch including the machining of all the bases and most important to Steve the alignment and pressing of the bearings.

Some of the chrome bases were made by Steve for an RSGB convention. Later chrome models were from a FL machine shop that Steve assembled.

1723. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.dx
Date: 2000-05-04 00:00:00 UTC
From: Ron <no-spam@no-spam.non>
Message-ID: <o08Q4.69$n51.2591@news7.onvoy.net>
Source record: 20746

You are welcome to connect to the internet accessible AR-Cluster at KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH. Please enter your QTH in the form: Chicago IL or Oslo Norway so that we will know where all our new friends are from! You will also be reminded to SET/LOCATION, that's optional but recommended. If you set your location, then the AR-Cluster will calculate beam headings for you to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and Command List go to:

http://www.cestro.com/pcluster/logon.html

The AR-Cluster homepage is http://149.74.21.166

Ideally you should use your logging program to make your telnet connection. Its a huge advantage as then your logging program will monitor the dx spots and alert you to contacts you need. However, here are two very simple ways to connect. The first uses the built-in telnet client in Win95/98. The second better way uses the free HyperTerminal Private Edition program.

Using the built-in telnet client:

Click START/RUN, then in the box enter: telnet 209.32.226.63 Now click OK. If you use a telephone modem for internet access, and were not already connected, your modem should begin dialing automatically.

Once connected to the KC0DJO AR-Cluster enter your call. If what you type does not display, then you must turn on local echo. In the Telnet window click on Terminal/Preferences.. and check Local Echo and then click on OK.

Using HyperTerminal:

I am sure you will greatly prefer HyperTerminal, BUT you will need a more recent copy of HyperTerminal than that which comes with Win95/98. Pick up the latest version of HyperTerminal Private Edition for free personal use from ZDNET.COM at:

http://www.zdnet.com/downloads/specials/free.html

Search there for HyperTerminal and download the program. When downloading you may select 'Run this program from its current location' I did that, it works, but you may prefer to save the install program in a directory of your choosing and execute it from there. When installing I choose all the default install options, which caused my old version of HyperTerminal to be replaced by this new version. All of my previous connection commands were retained.

Once you have installed HyperTerminal Private Edition:

Simply click here: telnet:\\209.32.226.63 -OR-

START/RUN, then in the box enter telnet:\\209.32.226.63 and click OK -OR-

Enter telnet:\\209.32.226.63 in the address field of your broswer and hit return -OR-

Start HyperTerminal and set up an ICON for KC0DJO, useful for quick starting later, selecting TCP/IP as your connection method with a host address of 209.32.226.63 then click OK.

You should set certain options for best operation:

File/Properties/Settings/ASCII Setup/ and enable these options:

Send line ends with line feeds
Echo typed characters locally
Wrap lines that exceed terminal width

There are many programs much better suited for cluster access. Look here:

http://www.cestro.com/pcluster/files.html

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

1725. Re: KB6 from 60's

Newsgroup: rec.radio.amateur.dx
Date: 2000-05-04 00:00:00 UTC
From: John <jdyer@txol.net>
Message-ID: <sh2v0oq4c34128@corp.supernews.com>
Source record: 20748

The original KB DXCC entity was listed as "Baker, Howland, and American Phoenix Is." Most if not all of the 1960's activity from the area was from Canton which was in the American Phoenix group. When the realignment came, KB6 Baker and Howland's status did not change and the KB6 entity remained valid, just smaller. Therefore ALL the KB6 activity prior to 1979 was from the Baker/Howland/American Phoenix entity and counts as such (KH1). The key here is that KB6 remained the same rather then becoming something new. Now the former American Phoenix islands including Canton are another story. Since they were transferred to Kiribati you can work a T31 (post-1978) on the island of Kanton and you have credit for Central Kiribati.

Well put.

There was also an entry for the British Phoenix Islands (VR1) all of
which eventually ended up in Kiribati. While I can't find the original
information at this time, I read somewhere that both British and U.S.
authorities were issuing amateur licenses valid for the same islands (so
you could get a VR1 call or a KB6 call for the same location) - and the
ARRL would count it as two different countries depending on whose
license you were using! If this was indeed the case, I suspect the
League didn't realize at the time that the American and British Phoenix
Islands were at least partially the same place...

Carlos Manuel Reyes, TI5CMR

It is with great sorrow that we would like to inform those on the ng about the death of Carlos Manuel Reyes, TI5CMR.

Carlos Manuel Reyes, also known as the pioneer of costarrican television, was one of the first engineers to experiment with the transmission of images through the airwaves in Costa Rica in the 1950s. In 1954 Mr. Reyes was responsible for the first formal TV tranmission from downtown San Jose using a closed circuit system and a homebrewed camera.

Carlos died on thursday morning, after several years of living at a retirement home in Costa Rica.

Greetings,

I was asked by Jens, HB9JOI to share this info:

"
QRP: 2watts on 40m in CW with only 11,86m longwire-antenna.

Transceiver is an SST from WILDERNESS-RADIO,modified by HB9JOI.

QRV approx 20:00h/UTC ......23:00h/UTC around 7.005Mc.....up to 7.035Mc,

I will see to be QRV around 04:00h/UTC again,but not at all days
permanently.

CallSign will be: EA8/HB9JOI/QRP.

I will stay there for the next 20 days .

73`s de Jens / HB9JOI / AMSAT-DL.#9802268 / DL-QRP-AG.#01176
"

This is all the info I have. He should be there now or shortly.

If you work him please share a brief post here. :-)

Cheers & Good DX,
Jim

Privately-owned Palmyra Atoll, KH5, owned by the Fullard-Leo family of Honolulu, is being sold to the Nature Conservancy; The U.S. Fish and Wildlife Service hopes to buy into the island, too. The sale price was not disclosed.

The NC plans on using the atoll as a wildlife refuge and small-scale ecotourism operation (making DXpeditions easier to arrange).

The atoll is located 300 miles north of the equator and about 1000 miles south of Hawaii. Due to being in the Inter-tropical Convergence Zone, it receives about 175 inches of rain per year, or about one-half inch per day throughout the year.

See www.honoluluadvertiser.com, Sunday edition, for the entire article.

The new owners intend it to be kept as a protected nature preserve;
apparently there are certain species of plants and animals that
occur only there and no where else on earth. The previous owners
have been excellent custodians of the atoll since 1922; over the
decades they were offered untold amounts of money by developers,
which they turned down with no hesitation.

During the past few months I've been waiting for that explosive opening, and have seen it pass by while at work during the week :(

Then on the weekends, when I get home, the flux suddenly drops down and the indexes go up.

This has happened to me several times already, which brings up the question: is this just a coincidence, or is there some kind of solar activity cycle which makes conditions dip on weekends? Is there some kind of correlation between decreased electromagnetic activity in society (as a result of the weekend) and drops in conditions?

If an area is designated as a "wildlife refuge" might that not place it in
the same category as national monuments, designated historical sites, etc.,
that require an EPA Envionmental Impact study before an Amateur Radio
station can be established there?
That would seem to make it *more* difficult to arrange DXpedtions, if
studies would be required.

It's a replacement for MS Office that's free for personal use & works under Linux. (there's no such thing as Excel for Linux...) This is the first Excel file I've not been able to open with StarOffice.

By the way, not only does it also crash StarOffice on my Linux box -- but it also crashes on my laptop that has real live Excel 97 under Windows 95. (under StarOffice, it even manages to change the name of the task!)

My theory is that radio signals reflect off the smog layer, which is strongest when the most people are commuting. On weekends, and especially holidays, propagation naturally goes to heck.

I suspect there's a bit of file corruption here. There's two ways to download it - one zipped, and one as the bare xls file. Like me, I'll bet you downloaded the bare file. I went back and downloaded the zip file, and the xls file in it loads nicely into StarOffice under OS/2. Most likely the bare xls file has been corrupted somehow (uploaded in ASCII mode, maybe?).

OK, I've seen this in many news groups, so it's not your words. The first part of it has been written by someone who's proud of his country but has forgotten that his grand-grand...-father has killed thousands of Indians, Aboriginies, Maoris ... on their own land and whose follower you are.

The other part, begining with "Xhs ..." is clearly your state of mind. Yours and all of those who are passing the letter on different news groups.

By the way, do you have a name ? When you say something you're supposed to stand for it. But you don't, you just throw it into someones face and run away just like a man, hmmm. I'd better say a creature under a white cap.

You're not a man, you're not an animal, you're more simple than that. (Parazite - is that the right english word ?) You're just about nothing. Is your family proud of you ?

Is this all you can do for your country ?

I haven't seen the movie yet but I just can't wait, it's not showing in
Australia yet.
Have a look at http://www.frequencymovie.com/ it's one of the best internet
web sites I've ever seen. Go to the "flash site" and click the "FACT or
FICTION" section.
(If you're in "non flash site" this part has been left out.)
Enjoy the journey with fantastic visual effects, simply spectacular. It's
the thing that most of us already knows but it's just too great to miss.

By the way, I'll look for the P5 DXped from the year 2036 tonight.
(see the site and you'll understand, hi)

I just grabbed the .zip & it works fine under Linux too. Nice
spreadsheet!

I did browse the bare .xls before overwriting it. There are plenty of
non-ASCII characters, so I don't think it was uploaded in ASCII mode,
but there's also plenty of readable text, so I'm not sure what to make
of it. Sometimes, things just happen<g>.

1774. 8th Area QSL Bureau Additions

Newsgroup: rec.radio.amateur.dx
Date: 2000-05-09 00:00:00 UTC
From: rdixon@peri.acs.ohio-state.edu
Message-ID: <8f9ce1$pk1$1@charm.magnus.acs.ohio-state.edu>
Source record: 20559

The US 8th Area QSL Bureau web pages now list the callsigns of hams that do not have envelopes on file, and hence are not receiving their cards.

If you have an 8 call, check the listings to see if you are there.

If you are a DX station, check the listings before sending any QSLs via the bureau. If the station you worked is listed, you will NOT receive any reply QSL unless the station sends in the required envelopes. Note that some very active hams and DXpeditioners and contesters are on this list.

The URL is http://www.mrrace.com/ARRL/QSLBureau

When FTPing, the primary thing A mode does is to translate between
different line endings. E.g., if you upload from a Windows to a Unix
box, the CR/LF gets changed to just LF. This is fine (and normally
what you want) for text files. Transferring binary files in this mode
tends to introduce subtle, yet debilitating changes.

I believe the problem is related to the fact that the men and women who
run the giant ionospheric ionization machines get weekends off. I
suppose if someone wanted to fund a weekend operation they might be
willing to leave the equipment fired up.

1784. Scandinavian Weekend Radio, Finland's FIRST private shortwave station!

Newsgroup: rec.radio.amateur.dx
Date: 2000-05-10 00:00:00 UTC
From: Ville-Veikko Haikarainen <v-v.haikarainen@swradio.net>
Message-ID: <8fbq2huee1@mordred.cc.jyu.fi>
Source record: 20569
Cross-posted to: alt.radio.pirate,rec.radio.amateur.dx

As the power behind the scenes of the Scandinavian Weekend Radio (SWR), is the Scandinavian Shortwave Radio Association. The purpose of SSRA is to promote and to support the non-commercial radio broadcasting in Finland. The operation of the radio station is independent of the Oy Finnish Broadcasting Company Ab, of home and foreign radio chains, other radio stations and advertisers.

The fixed studios and transmitter equipment are placed on Virrat, western Finland. SWR can be heard on the 25 meters frequency band shortwaves, on frequency 11690 or 11720 kHz. We will be on the air at the first Saturday of every month at 0:00 - 23:59 local time (+2 UTC). If our license is granted in time, the first transmission is held 1st of July 2000.

Our reception area will cover the Nordic countries and the area around the Baltic Sea. Because of the INTERNATIONAL character of our station, also English and Swedish are used in addition to the Finnish as the languages of our radio programmes. The reception area of the station also brings a possibility to make Finnish music known to our foreign listeners. For this reason more than half of the music played will be domestic.

Our purpose is to function as the radio enthusiasts' report channel, to support, and to promote the radio hobby. We report in the news events of the radio world and information such as for example the activity of the sun, which greatly affect in distant radio reception.

More information about SWR can be found in our website:
http://www.swradio.net or by e-mail: info@swradio.net

Since you're posing your question to the DX newsgroup, you're probably trolling; I'll bite the bait:

We're communicators, first and foremost. As communicators, we're not content to limit the number of people we can talk to, nor do we attempt to limit the distance our signal carries. On the contrary, we strive to build as efficient a station as possible so as to get every possible milliwatt into the ionosphere. One measure of the efficiency of our station is being able to consistently "work" hams in far-off countries; no different from a golfer striving to drive the ball as far and accurately as possible.

Just as the stamp collector collects stamps and the coin collector collects coins, we collect QSL cards. A rare card might not have the monetary value of a rare stamp or coin, but nevertheless, it represents personal value to the recipient. Also, just as the golfer's score card provides proof of his distance and accuracy, so too the QSL card provides proof that an amateur did in fact carry on a two-way contact with the distant station in some far off land.

Walter, do you routinely troll the golf, coin, and stamp NGs, making fun of their pastimes? If not, then why troll the DX NG with your silly questions?

Jeffrey, don't presume to lecture your elders.

I have several QSL's from KP6, so talking to Palmyra on my radio
another time is way down on my list of things that I gotta get done.

In that regard most of humanity has the same priority regarding
Palmyra, even if the FCC has changed the prefix.

And thats the way it is!

Walter

For me and my kids, it was an interesting movie with a loose ham-radio connection. Since the whole plot is unreal. those seeking reality will be disappointed. Still, the movie has some positive point. There is a beam (X7?) in the urban environment, and it does not cause any TVI/RFI/drops-in-property-value.

Source record: 20584

Hello all and thanks for reading this message. Dayton is just around the

corner, and I am getting the itch to try out a different rig! For the longest time I have been wanting a Ft-990, but now I am seriously looking at the Ft-920, especially with all its features. All those fancy

gadgets are nice but to me what makes the radio is the receiver. I would

to hear from those who may own or owned these radios. Let me know your likes, dislikes etc., and especially how it performs in crowded band conditions , such as a major contest, dx pileup etc. I especially would like to hear form those who may have had both to describe the major differences between the two.

I am currently using a Ft-890, my operating habits are mostly chasing dx and rag chewing on phone. I also participate in the major contests.

I do however occasionally work cw & rtty to work a "new one". Thanks for

any and all reply's. 73 de Dale, N8PCN.

Look around and see if you can't find a 990 WITH all the features
loaded up! I spent almost as much money stuffing mine with proper
crystal filters and accessories as it cost me! The 990 is all the ham
rig you'll ever need IF it has the filters in it. Of course, having
the other toys that go with it are real nice...(c;

Agreed. I have had a FT990 since January 1993 and have not felt any need to replace it yet. It has all filters & is used mainly for DXing, mostly CW, from suburbia with a low antenna and high noise levels at times. In these difficult condx I have managed 5BDXCC which is I think a tribute to the receiver especially. I don't know much about the 920 except that the QST review was about as close to a slam as they ever get (Tx spectral purity). I have seen FT990s at very reasonable prices recently and I think a good used one would be hard to beat.

Popular logging product gets many new improvements

Muscle Shoals, Alabama. May 12, 2000: Creative Services Software announced that the version 3.07 of the popular logging program, Log Windows has been released. Log Windows version 3.07 is the first major functional upgrade for the product in almost two years. In January 2000, CSS started developing, selling and supporting the product and did a minor update for release 3.06.50.

Log Windows 3.07 includes the following new features:
- Telnet DX Cluster Access
- Support for new radios, including the IC-756 and the TenTec Pegasus (direct support)
- New logging mode options
- IOTA Support
- WinQSL QSL Manager Support
- QSLMaker 2.3 QSL Printing Program Support
- Full ADIF support

The product retails for $69.95 and upgrades from release 3.06.15 or earlier are $40.00. Those who have purchased version 3.06.50 will get this upgrade free. It also appears on the Digital Trio CD .
Log Windows is owned by SCO, Inc and is maintained by Creative Services Software.

Creative Services Software is at http://www.cssincorp.com
The Log Windows homepage is at http://www.logwindows.com
SCO, Inc is on the web at http://sco.home.mindspring.com/lw.html

Windows, Windows 95, Windows 98 and Windows NT are Registered Trademarks of Microsoft Corporation.

Source record: 20591

The first 3 years of its life, my 990 spent 90% of its time on 14.105 as a packet node to VHF, then as the APRS crossband digipeater on 10.151 APRS network.

The aprs craze faded. I took my 400' VHF node down and sold the equipment. I took the packet HF node down as few people were using it.

I haven't used my 990 in about 3 years, now. I don't have to fight to use the net. HF has become like living in a ghetto full of thugs.

Larry W4CSC....I can turn the thugs off on the net.

1807. Question: Innovation in Amateur Radio

Newsgroup: rec.radio.amateur.dx
Date: 2000-05-12 00:00:00 UTC
From: Kevin McQuiggin <mcquiggi@sfu.ca>
Message-ID: <391C479A.ED335B9A@sfu.ca>
Source record: 20592
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.space,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.antenna

Hi Folks:

I've been licenced for 23 years, currently VE7ZD, and am in graduate school up here near Vancouver, BC.

I'm researching amateur radio and its history. I'm specifically interested in inventions, discoveries, or techniques that were developed within amateur radio and later spread to the electronics industry. Similarly, some of our operating techniques and procedures were later widely adopted by other services.

Hams operate outside of the structured environments within industry, and I think that this freedom has permitted us to invent and discover without being shackled by any policy issues, or possible stigmatism from investigating things that would be considered "too far out in left field" by management and non-ham co-workers.

Examples would be the investigation of wavelengths below 200 meters, with the discovery by hams that such wavelengths were better for propagation than longer waves; packet radio; APRS; propagation studies that were undertaken in the 20s and 30s; facsimile; SSTV; and network operating techniques.

Some of this stuff was regulated, such as the banishment of amateur radio to the "useless" wavelengths < 200 M, but this sort of proves my point. There's been lots of innovation within the hobby, and the general public now benefits from it.

If anyone could provide me with more examples, or good books or articles on this topic, then that'd be great. Of course I'll give appropriate credit to those who assist!

If you could email me as well as posting your reply, thanks. There's lots of traffic in these groups and I don't want to miss any replies.

73,

Kevin VE7ZD
